A great revival of the missionary spirit of Islām followed the Wahhābī reformation; this movement stirred the whole of the Muslim world—either to sympathy or to opposition—and thus directly or indirectly gave the impulse to the great missionary movements of the 19th century. In India the Wahhābī preachers aimed primarily at purging out the many Hindu practices that caused the Muslims to deviate from the ways of strict orthodoxy, but incidentally they carried on a propaganda among unbelievers, and their example was followed by other Muhammadan missionaries, whose preaching attracted to Islām large numbers of converts throughout the country. In Sumatra Wahhābī reformers stirred up a revival and made proselytes. But a more momentous awakening was felt in Africa. 'Uthmān Danfodio returned from the pilgrimage to Mecca full of zeal for the Wahhābī reformation, and under his leadership his people, the Fulbe, who had hitherto consisted of small scattered clans living as shepherds, rose to be the dominant power in Hausaland; the methods of the Fulbe were violent and political, and they endeavoured to force the acceptance of Islām upon the pagan tribes which they conquered. On the other hand, a peaceful propaganda was carried on in the Sūdān by members of the Amīrghaniyyah and Qādiriyyah orders; the former takes its name from Muhammad 'Uthmān al-Amīr Ghani, whose preaching won a large number of converts from among the pagan tribes about Kordofan and Sennaar; after his death in 1853 the order that he founded carried on his missionary work. The Qādiriyyah order had been introduced into Western Africa in the 15th cent., but awoke to renewed life and energy in the 19th. Up to the middle of that century most of the schools in the Sūdān were established and conducted by teachers trained under the auspices of the Qādiriyyah, and their organization provided for a regular and continuous system of propaganda among the heathen tribes. Another order, the Sanūsīyyah (founded in 1837), has also been very active and successful in proselytizing.

A fresh outburst of Muslim missionary zeal in Africa exhibited itself when the greater part of that continent was partitioned among the Powers of Christian Europe—Britain, France, and Germany; by establishing ordered methods of government and administration, and by facilitating communication by means of roads and railways, they have given a great stimulus to trade and have enabled that active propagandist, the Muslim

trader, to extend his influence in districts previously closed to him and to traverse familiar ground with greater security.

Throughout the course of Muhammadan history Islām has at times received large accessions of converts for various reasons—political and social—wholly unconnected with missionary enterprise, at the same time it has always retained its primitive character as a missionary religion, without, however, having any permanent organization to serve as a medium for its expression. Societies for carrying on a continuous propaganda were unknown in the Muslim world before the last decades of the 19th cent., and such Muslim missionary societies as are now found in Egypt and India appear to have owed their origin to a conscious imitation of similar organizations in the Christian world. The most characteristic expression of the missionary spirit of Islām is, however, found in the proselytizing zeal of the individual believer, who is prompted by his personal devotion to his faith to endeavour to win the allegiance to it of others. Though there have been religious teachers who may be looked upon as professional missionaries of Islām, especially the members of the religious orders, it is the trader who fills the largest place in the annals of Muslim propaganda; but no profession or occupation unites the believer for the office of preacher of the faith, nor is any priestly ministrant needed to receive the convert into the body of the faithful. Some observers, entitled to respect for their knowledge of the Muhammadan world, have gone so far as to say that every Muslim is a missionary:

'A tout musulman, quelque mondain qu'il soit, le prosélytisme semble être en quelque sorte inné' (Snouck Hurgronje, *RHR* lvi. (1903) 66). 'The Muslim is by nature a missionary . . . and carries on a propaganda on his own responsibility and at his own cost' (W. Munzinger, *Petermann's Mittheilungen*, 1867, p. 411).

However exaggerated such an opinion may be, stated thus as a universal, it is certainly true that there is no section of Muslim society that stands aloof from active missionary work, and few truly devout Muslims, living in daily contact with unbelievers, neglect the precept of their Prophet:

'Summon thou to the way of thy Lord with wisdom and with kindly warning' (Qur'ān, xvi. 126).

Even the prisoner will on occasion take the opportunity of preaching his faith to his captors or to his fellow-prisoners. The first introduction of Islām into Eastern Europe was the work of a Muslim jurisconsult who was taken prisoner, probably in one of the wars between the Byzantine empire and its Muhammadan neighbours, and was brought to the country of the Pechenegs (between the lower Danube and the Don) in the beginning of the 11th cent.; before the end of the century the whole nation had become Muhammadan. In India, in the 17th cent., a theologian, named Shaikh Aḥmad Mujaddid, who had been unjustly imprisoned, is said to have converted several hundred idolaters whom he found in the prison. Women as well as men are found working for the spread of their faith; the influence of Muhammadan wives made itself felt in the slow work of converting the pagan Mongols, and in Abyssinia in the first half of the 19th cent. the Muhammadan women, especially the wives of Christian princes, who had to pretend a conversion to Christianity on the occasion of their marriage, brought up their children in the tenets of Islām and used every means to spread their faith. In the present day the Tatar women of Kazan are said to be zealous propagandists of Islām.

The individualistic character of Muhammadan missionary effort partly explains the absence of detailed records of conversion; there is a similar lack of the common apparatus of modern Christian

missions—e.g., tracts and other missionary literature for general distribution; but in learned circles a vast controversial literature has been produced, to which some of the ablest of Muslim thinkers have contributed—e.g., al-Kindī († 873), al-Mas'ūdī († 958), Ibn Ḥazm († 1064), al-Ghazālī († 1111), etc., as well as a number of converts who have written apologies for their change of faith and in defence of their new religion.¹ Several documents making a direct appeal to unbelievers have been preserved; the earliest of these are the letters² which Muhammad addressed to the great potentates of his time, the emperor Heraclius, the king of Persia, the governor of Yaman, the governor of Egypt, and the king of Abyssinia. To the reign of al-Ma'mūn (813–833), who himself is said to have been zealous in his efforts to spread the faith of Islām, belongs the interesting treatise of 'Abd Allāh b. Ismā'il al-Hāshimī, in which he makes an impassioned and affectionate appeal to his Christian correspondent to accept Islām.³ Of a much more formal character are the two letters, one in Arabic and the other in Persian, which the Timūrid prince, Shāh Rukh Bahādur, addressed in 1412 to the emperor of China, inviting him to 'observe the law of Muhammad, the Apostle of God, and strengthen the religion of Islām, so that he might exchange the transitory sovereignty of this world for the sovereignty of the world to come.'⁴ A similar royal missive was sent by Mawlā'ī Ismā'il, Sharif of Morocco, to King James II. in 1698.⁵ Coming from such an exalted source, these documents have been preserved, while the efforts of humbler folk have remained unrecorded. The publication of tracts and periodical reports of missionary societies makes its appearance only in the latter part of the 19th century.

LITERATURE.—Some attempt to give a bibliography of the scattered notices of Muslim missionary activity is made in *The Preaching of Islām*, London, 1913, by the present writer. For the early period the most valuable source is *Annals dell' Islām*, by Leone Caetani, Milan, 1906 ff., with exhaustive references to authorities, both Christian and Muhammadan. China is the only country to which any detailed monograph on the spread of Islām has been devoted, in Marshall Broomhall, *Islām in China*, London, 1910; see also *Mission d'Ollone, Recherches sur les Musulmans chinois par le commandant d'Ollone*, etc., Paris, 1911. For different parts of Africa separate monographs have appeared, e.g., C. H. Becker, 'Zur Geschichte des östlichen Sudan' and 'Materialien zur Kenntnis des Islām in Deutsch-Ostafrika,' *Der Islām*, I. and II, Strassburg, 1910, 1911; G. Bonet-Maury, *L'Islamisme en Afrique*, Paris, 1906; L. Chatelet, *L'Islām dans l'Afrique occidentale*, do, 1899; M. Klamroth, *Der Islām in Deutsch-Ostafrika*, Berlin, 1912. For the Malay Archipelago see the article 'Mohammedanism' and the various place-names in *Encyclopædie van Nederlandsch-Indië*, ed. P. A. van der Lith and J. F. Snelleman, Leyden, 1899–1905; C. Snouck Hurgronje, *Nederlandsch-Indië*, do, 1915; G. Simon, *Islām und Christentum im Kampf um die Eroberung der antimistischen Heidenwelt: Beobachtungen aus der Mohammedanermision im Niederländisch-Indien*, Berlin, 1910. Much material may be gathered from the works of travellers in Muhammadan countries, from the journals and other periodical literature published by the various Roman Catholic and Protestant missionary societies, and from the periodicals specially devoted to the study of Islām, viz. *Revue du monde musulman*, Paris, 1906 ff., *Der Islām, Zeitschrift für Geschichte und Kultur des islamischen Orients*, Strassburg, 1910 ff., *The Moslem World, a Quarterly Review of current Events, Literature, and Thought among Mohammedans*, London, 1911 ff., *Mir Islām*, Petrograd, 1912 ff., and *Die Welt des Islām, Zeitschrift der deutschen Gesellschaft für Islamkunde*, Berlin, 1913 ff. T. W. ARNOLD.

MISSIONS (Zoroastrian).—Zoroastrianism began as a distinctly missionary religion. Accord-

ing to tradition, Yima (on whom see art. BLEST, ABODE OF THE [Persian]) was the first mortal asked by Ahura Mazda 'to remember and to cherish' the faith (*Vend.* ii. 3), but he professed himself unequal to the task and—unless the tradition is devoid of all meaning—contented himself with extending the domain of Iranian temporal power. Previous to the rise of Zoroaster there is no record of any conscious endeavour to propagate Iranism, which, like all religions which have no personal founder, was non-missionary.¹ With Zoroaster's advent, however, the attitude changed, and he himself, convinced that his religion was 'the best for existent beings, to further my creatures when followed in accord with righteousness' (*Ys.* xlv. 10), and that it would confer blessing for all eternity (*Ys.* liii. 1), besought Ahura Mazda and Asa to reveal to him their divine plan that he could rightly know how to proclaim (*sāvaγaēmā*) the religion (*Ys.* xlix. 6), to the end that he might 'convert all men living' (*yā jwāntō vīspēng vāurayā*, *Ys.* xxxi. 3). The potency of the faith would convert many hearers (*Ys.* xlvii. 6), and the promise of Paradise would turn the wicked (*Ys.* xxviii. 5). Indeed, a later text (*Yt.* xiii. 87–94) celebrates the greatness of Zoroaster, destined to spread the Mazdayasnian faith over all the world. 'Such was the merit of the religion that, if a non-believer accepted it and did not sin in future, all his past transgressions, even the most heinous, were forgiven' (*Vend.* iii. 40 f.).

Zoroaster was successful in winning to his doctrine King Vištāspa of Bākh, who spread the faith with his conquests (cf. *Yt.* xiii. 99 f.; *Šāh-nāmah*, tr. A. G. and E. Warner, London, 1905 ff., v. 76 f., 85; A. V. W. Jackson, *Zoroaster*, New York, 1899, pp. 80–92); and among the converts were Turanians,² such as Fryāna and his descendant Yōišta (*Ys.* xlv. 12; *Yt.* v. 81, xiii. 120), Arejahvant (*Yt.* xiii. 113), Frārazī (*Yt.* xiii. 123), Saēna (*Yt.* xiii. 97; cf. *Dinkart*, IX. xxxiii. 5), and Isvant (*Yt.* xiii. 96; *Dinkart*, loc. cit.). Zoroaster is represented as praying that he may be able to cause heads of houses, villages, districts, and lands to think, speak, and act in accordance with the religion (*Ys.* viii. 7), and missionaries went afar 'to them who in [other] lands seek for righteousness' (*Ys.* xiii. 6), while, according to a Persian *rivāyat*, some account of the Zoroastrian propaganda was contained in the lost Vištāsp Nask of the Avesta (*SBE* xxxvii. [1892] 424). Itinerant (*pairi-jadān*) priests are mentioned side by side with those who laboured at home (*dainhāurvaša* [*Visp.* iii. 3, ix. 2; *Yt.* xxiv. 17]), and in some cases such priests were evidently invited abroad, since they are

¹ In one of the Aramaic papyri from Elephantine a Persian is mentioned as head of a city (perhaps Syene; cf. E. Sachau, *Aram. Papyri und Ostraka aus . . . Elephantine*, Leipzig, 1911, pp. 51–54) in the reign of Darius II., and is described as a 'Mazdayasnian' (מזדישנין). Since this word (Av. *mazdayasna*) is frequently used in the Younger Avesta to denote a Zoroastrian (cf. O. Bartholomae, *Altiran. Wörterbuch*, Strassburg, 1904, col. 1160 f.; the borrowed Armenian *mazdean* is employed in the same sense [H. Hübschmann, *Armen. Gramm.*, Leipzig, 1895–97, i. 190]), it may possibly support the theory (opposed by the present writer in art. ACHÆMENIANS, but advocated by J. H. Moulton, *Early Zoroastrianism*, London, 1913, p. 89 ff.) that the Achemenians were Zoroastrians. On the other hand, the writer has always maintained that the Achemenian Persians were Mazdayasnians in the rigid sense of the word, so that the Av. term would prove little in this connexion.

² The ethnology of the Turanians is uncertain. They have commonly been supposed, since the days of F. Max Müller, to be non-Iranian, but this seems to be true only in part. Their names, as recorded in the Avesta, are Iranian, and the *Šāh-nāmah* (i. 189) records that they were descended from Tūr, son of Faridūn, while the name Tūra appears to be Iranian (Bartholomae, col. 658). It is possible that they were Scythians (J. Marquart, *Eransahr*, Berlin, 1901, pp. 156–157; S. Feist, *Kultur . . . der Indogermanen*, do, 1913, p. 405 f., 425, 471; cf. art. SCYTHI). While they may well have been a congeries of races, like the Scythians, they appear to have been regarded, by the Avesta, as nomad Iranians as opposed to the pastoral folk who evolved the Avesta. See, further, art. TURANIANS.

merely academic attitude is amply proved by the records of persecution of the Christians by the Sasanid rulers in Persia.¹ The Pahlavi portion of the *Nirangistān* (ed. D. P. Sanjana, Bombay, 1894, fol. 16*, 17*) bears witness to the admission of proselytes, and the Pahlavi *Māṭigān-i-Hazār Dāstān* (ed. J. J. Modi, Poona, 1901, p. 1; tr. Bartholomae, *WZKM* xxvii. [1914] 347 ff.) states that a slave belonging to a Christian should be ransomed by Zoroastrians from his master if such a slave embraces Parsiism, though he is not to be set free if he becomes a Zoroastrian together with or after his master.

During the period under consideration there was some extension of Zoroastrianism in China (cf. Jackson, pp. 278-280), though no details are thus far known. It would appear, however, from the discoveries made by M. A. Stein, A. Grünwedel, A. von Le Coq, and P. Pelliot in Turkestan, where Buddhist, Persian, Turki, Greek, and Chinese relics lie intermingled, that Zoroastrianism passed along the great trade-routes. It may be doubted whether there was any active propaganda.²

We have just seen that the Sasanids proceeded by force against non-Zoroastrians in Persia; they pursued a similar course in Armenia. Ample proof of this is given in the Armenian historians,³ and much further information is doubtless to be gleaned from the hitherto untranslated Acts of the Armenian Martyrs.⁴ As an example it will be sufficient to summarize the data of the 5th cent. writer Elisæus (*Hist. of Vartan*, tr. C. F. Neumann, London, 1830):

All non-Zoroastrians were oppressed in Armenia from the reign of Arsak m. (341-387) till that of Artasēs iv. (422-429). The Persian Yazdagird II. (438-457) followed this example, urged by the Zoroastrian priests to 'exterminate the sect of the Christians,' and he deprived them of their property and martyred those who remained steadfast. Some he induced to become apostates by money and high rank, saying, 'Oh that you would but receive the doctrine of the Magi into your souls! Oh that you would but exchange the heresy of your souls for the true and excellent laws of our gods!' The Magi exhorted him, if he would prove his gratitude for his power and his victories, to make Zoroastrianism dominant everywhere. In the course of his endeavours the Zoroastrians promulgated an interesting Zervanite statement of theology, to which the Christians replied (pp. 11-20). The persecution provoked a revolt, which was not suppressed until the Christian leader, Vardan, fell in battle in 451. The whole account of Elisæus shows the clash of two religions, each of uncompromising character. Cruelty and craft were only too evident, but the spirit of sincere conviction must be recognized.

With the overthrow of the Sasanian dynasty by the Arabs the missionary enterprise of Zoroastrianism practically came to a close. The plight of those who remained in Persia was—and is—too

wretched to allow more than a reluctant and hostile toleration at best from the dominant Muhammadanism.¹ Those who, in the 7th cent., migrated to India and thus gave rise to the communities of Parsis (*q.v.*) were received with none too warm a welcome. As Dhalla observes (p. 323), with regard to their abstention from propaganda in India,

'The precarious condition in which they lived for a considerable period made it impracticable for them to keep up their former proselytizing zeal. The instinctive fear of disintegration and absorption in the vast multitudes among whom they lived created in them a spirit of exclusiveness and a strong feeling for the preservation of the racial characteristics and distinctive features of their community. Living in an atmosphere surcharged with the Hindu caste system, they felt that their own safety lay in encircling their fold by rigid caste barriers.'

Nevertheless, a certain amount of proselytizing continued as late as the 18th cent., especially in the case of slaves purchased from low-caste Hindus. Such procedure, however, instead of being welcomed as extending the faith, aroused hostility on social grounds, some Parsis being unwilling to permit such converts to prepare sacred cakes (*drons*) for the festivals or to allow the proselytes to be exposed after death on the Parsi 'Towers of Silence.' The question was referred more than once to the Zoroastrians in Persia, whose replies were in favour of admitting converts. From the point of view of orthodox Zoroastrianism, there cannot be the slightest question that the ruling of the Irāni (Persian) Zoroastrians was right. On the other hand, it was felt by the Parsis of India that an influx of low-caste Hindus would be prejudicial to the purity of their Iranian community.

The only cases in which proselytism has been urged in recent years have been instances in which a Parsi has married a non-Zoroastrian wife, or has desired to have children born by such a wife, or by a non-Zoroastrian mistress, received into the Parsi community. In all these cases admission has been granted only in the face of intense opposition.

The motives of the converts have been, in practically every instance, worldly, not religious, and the conversions have been purely nominal. Parsis hold that such proselytes are harmful to the faith, and that, if converts are admitted at all, it must be under conditions which put the sincerity of the neophytes' religious convictions beyond suspicion. The Zoroastrian community has no organization for training new converts; the matrimonial opportunities of Parsi girls are lessened by the possibility of converting prospective wives of other religions; and the admission of illegitimate children of Parsis is felt to be virtually a condoning of immorality.

This attitude—so different from that of Zoroaster and of Zoroastrianism until the migration to India—is fraught with grave possibilities to Parsiism. The age of marriage is rising, and the birth-rate is falling. There is a steady leakage towards agnosticism (not towards conversion to Christianity, Muhammadanism, or any form of Hinduism). Even among those who regard themselves as Zoroastrians there is much laxity. Theosophy (*q.v.*) is making a form of 'esoteric' Zoroastrianism which can scarcely be reconciled with the Avesta. Some of the radical wing of the 'reforming' party, at the other extreme, rationalize the religion until it becomes a travesty of its real content. Against all this must be reckoned many wisely conservative Parsis, both priests and laymen,² but whether, so long as all accessions from without are forbidden, they can advance and extend the 'good religion' is a question for the future.

LITERATURE.—M. N. Dhalla, *Zoroastrian Theology*, New York, 1914, pp. 11-13, 72-75, 198 f., 323-325, 367 f.; letter of Rustamji Edulji Dastur Peshotan Sanjana to the writer (5th July 1915).

Abdas, Hormisdas, Sâhin, and Benjamin' is tr. by P. Peeters, *Analœta Bollandiana*, xxviii. [1909] 399-415. For further details see the *Bibl. hag. orient.* cited above.

MITHRAISM.—The religion generally known by this name, which enjoyed a wide-spread popularity in the centuries immediately preceding and following the Christian era, centred in the worship of Mithra, a divinity worshipped in the Indo-Iranian period by the two most easterly branches of the Aryan race, as is shown by the fact that his name appears in the form *Mitra* among the gods of the Vedic pantheon and in that of *Mithra* in the early religious poetry of Persia. The name coincides in form with a common noun which in Sanskrit means 'friend' or 'friendship' and in Avestan 'compact,'¹ and it would seem to follow that from the earliest times the conception of Mithra was an ethical one.

1. *Mitra in Vedic religion.*—In the only hymn addressed exclusively to him in the *Rigveda* (iii. 59) *Mitra* is said to 'bring men together, uttering his voice' and to watch the tillers of the soil 'with unwinking eye'—phrases which suggest a solar divinity; and from the numerous hymns in which *Mitra* and *Varuna* are conjointly addressed it is abundantly clear that both divinities are manifested in the celestial light. In the *Brāhmaṇas*, indeed, the view prevails that *Mitra* represents the light of day, especially that of the sun, while to *Varuna* belong the 'thousand eyes' of night. This seems, however, to be a later refinement, the beginnings of which may be traced in the *Atharvaveda*, especially ix. iii. 18, where *Mitra* uncovers in the morning what *Varuna* has concealed. The theory of Oldenberg,² that the group of divinities known as *Adityas*, who are said in *Rigveda* ix. cxiv. 3 to have been seven in number,³ originally represented sun (*Mitra*), moon (*Varuna*), and five planets, and was borrowed from a Semitic race, has little to commend it. It is more probable that *Varuna* was by origin the all-encompassing vault of heaven (*√var*, 'cover'), *Mitra* the light which proceeds therefrom. Ethically the two gods were probably differentiated in the Indo-Iranian period, *Varuna* being the supreme upholder of physical and moral order, *Mitra* the all-seeing witness who guarantees good faith between man and man. This is not so clear in the Vedas as in the early religious poetry of Persia, where the place of *Varuna* is taken by *Ahura Mazda* (= 'Wise Lord,' the word *Ahura* corresponding to *Skr. asura*—a term which in later Vedic literature means 'demon,' but in the *Rigveda* is applied to gods, more especially to *Varuna* and *Mitra*, and is plausibly suggested to have connoted the possession of occult power).

2. *Mithra in Iran.*—Among the Iranian peoples the worship of Mithra attained an importance which it never possessed in India. The early history of this worship is very obscure, owing to the uncertainties which beset the interpretation of the Avestan texts. From the inscriptions found by H. Winckler at Boghaz-keui in 1907,⁴ especially the treaty between the Hittite king Subbiluliuma and Mattiuaza, the son of Tushratta, king of Mitanni, it appears that *Mitra*, *Varuna*, *Indra*, and the *Nāsatiya*, or 'Twins,' were worshipped in the district of Mitanni in the 14th cent. B.C. Eduard Meyer ('Das erste Auftreten der Arier in die Geschichte,' *SBAW*, 1908, p. 14 ff.) regards this fact as a proof that an Aryan community existed in Mitanni; in *EB*¹¹ xxi. 203 he suggests that the Aryans in question were a caste ruling over a non-Aryan people. It is, however, uncertain whether

¹ These words are connected by etymology with the base **mei*, 'exchange,' seen in Lat. *com-munis*, Goth. *ga-mains*, M H G. *ge-mein*, etc.; see K. Brugmann and B. Delbrück, *Grundriss*², Strassburg, 1897 ff., n. i. 346, and especially A. Meillet, *J A x. x* (1907) 143-159.

² *Religion des Veda*, p. 185 ff.

³ Six *Adityas* are enumerated in *Rigveda* ii. xxvii. 1, and eight in x. lxxii. 8 f.

⁴ Cf. H. Winckler, 'Die Arier in den Urkunden von Boghaz-kei,' *OLZ*, 1910, pp. 289-301.

we should regard them as the ancestors of the Iranians, and even possible (as J. H. Moulton has suggested, *Early Zoroastrianism*, London, 1913, pp. 7, 26) that we have here the relic of a prehistoric migration backward from India to the North-West. It is to be observed that the name *Varuna* is otherwise unknown in Iranian texts, whilst *Ahura Mazda*, who takes his place, appears under the form *Assara Mazāsh* in an Assyrian list of divinities of about 650 B.C. (published by F. Hommel, *PSBA*, 1899, pp. 127, 138), and had, no doubt, been borrowed from an Iranian people at a considerably earlier date. To the same period belongs a tablet from the library of Assurbanipal in which Mithra is identified with Shamash (R. iii. 69, 5, l. 72). Our next evidence dates from the Achaemenian dynasty. The inscriptions of Cyrus, it is true, throw no light on his worship of Iranian divinities, and Darius I. mentions *Ahura Mazda* only; but the evidence of theophoric names (*Μιτραπεδάρης* [Herod. i. 110, 121], *Μιτρεδάρης* [ib. iii. 120, 126, 127], and, earlier still, *Μιτραπεδάρης*, if this is the correct reading, in *Æsch. Pers.* 42) makes it plain that Mithra was prominent in the Persian pantheon,¹ while Artaxerxes Mnemon (403-358 B.C.) names as his divine protectors *Ahura Mazda*, *Anāhita*, and *Mithra* (*Art. Sus.* a, 4 f., *Ham.* 5 f. [O. Pers. text]). The coupling of Mithra with the goddess *Anāhita* reminds us of the confusion between the two of which Herodotus is guilty in the passage (i. 131) in which he describes the Persian religion, and identifies *Μιτρεα* with the 'Assyrian' *Μυλitta* (an appellation of *Ishtar*).

3. *Mithra in early Zoroastrianism.*—We have next to consider the position of Mithra in the religion of Zarathushtra. Adopting the position (1) that the *Gāthās* go back to the time of the Prophet himself, and that this was not later (and very possibly earlier) than the traditional date (7th cent. B.C.), and (2) that the *Yashts*, at any rate as regards the metrical portions, are not many centuries later,² we observe that Mithra is never mentioned in the former, and was ignored by Zarathushtra in his reform. It may even be possible to go further, and to hold that the Prophet regarded him as a *daēva*, or demon, whose worship was to be banished from the pure faith. In *Ys.* xxxii. 10 we hear of the teacher of evil who 'declares that the Ox and the Sun are the worst thing to behold with the eyes,' which may perhaps refer to the nocturnal sacrifice of the bull by Mithraists; and it is also possible that the Ox-Creator (*Gēush-tashan*) named in *Ys.* xxix. 2 was a substitute for Mithra devised by Zarathushtra. These are only conjectures;³ but we shall find in later Mithraic ritual abundant proofs of the survival of primitive conceptions such as Zarathushtra endeavoured to eradicate. It is not necessary here to discuss the difficult questions regarding the measure of success attained by the Prophet's reform and the origin of the counter-movement (perhaps Magian) which restored the more primitive workshops. It may be worth mentioning, however, that in the Persian calendar, which there is reason to think (on astronomical grounds) was introduced into Cappadocia by Darius I.,⁴ the names of the months are derived from divine names, which include those of Mithra

¹ Cf. also the names *Μιτρεοπαζάρης* (Corn. Nepos, *Datam.* vi. 8, Diod. Sic. xv. xci. 5), *Μιτρεοβούζάρης* (Diod. xvii. xxi. 3; Arrian, *Anab.* i. xvi. 8), *Μιτρεαπένης* (Nicolai Damasc. *FHG* iii. 363), *Μιτρεοπαζάρης* (Plut. *Themist.* 29), *Μιτρεαζάρης* (Arrian, *Anab.* iii. viii. 5), etc. (F. Justi, *Iran. Namenb.*, Marburg, 1896, pp. 208 f., 213, 216 f., and esp. Cumont, *Textes*, ii. 76-85, 464-466).

² A popular account of the present state of the question will be found in J. H. Moulton's *Early Religious Poetry of Persia*, Cambridge, 1911, and further details in the same author's *Early Zoroastrianism*.

³ Moulton, *Early Zoroastrianism*, pp. 129, 357.

⁴ See excursus, *ib.* p. 430 ff.

(but not Anāhita) and the six Amesha Spentas (or Amshaspands), which are among the most characteristic features of Zoroastrianism properly so called. For our knowledge of Mithra-worship among the Persians we naturally turn to the *Mithr Yasht* (Yt. x., Eng. tr. in *SBE* xxiii. [1883], by J. Darmesteter, more accurately in German by F. Wolff, *Avesta . . . übersetzt*, Strassburg, 1910, pp. 198-221). The opening lines of the poem show clearly the high position enjoyed by Mithra, although, as a *yazata* ('adored one') he stood technically on a lower level than the six Amshaspands of Zarathushtra's creed.

'Thus spake Ahura Mazda to the holy Zarathushtra: When I created Mithra, lord of wide pastures, then, O Spitama, I created him as worthy of sacrifice, as worthy of prayer as myself, Ahura Mazda' (Yt. x. 1).

The *Yasht* speaks with no uncertain voice either of the physical or of the ethical character of the god:

'The first of the spiritual *Yazatas*, who rises over the Mountain¹ before the immortal sun, driver of swift horses; who foremost attains the gold-decked, fair summits, whence he surveys the whole dwelling-place of the Aryans, he, the most mighty' (Yt. x. 13).

This is clearly neither the sun himself nor any individual object, but the heavenly light in general, and it suits well with the recurring formula of the hymn:

'To Mithra, the lord of wide pastures, we sacrifice, the truth-speaking, eloquent in assembly, the thousand-eared, the shapely, the myriad-eyed, the exalted, (lord of) the broad look-out, the strong, the sleepless, the vigilant' (Yt. x. 7, etc.).

Here the ethical and the physical are already combined; and in the second stanza of the hymn the god and the 'promise' or 'compact' over whose fulfilment he watches are almost identified; for Zarathushtra is thus addressed by Ahura Mazda:

'Break not the compact (*mithrem*), whether thou make it with the faithless or with the righteous fellow-believer, for Mithra stands for both, for the faithless as for the righteous.'

Throughout the *Yasht* the invincible might of Mithra is invoked against the *mithradruj*, which may be translated either 'deceiver of Mithra' or 'promise-breaker.' It is this guardianship of truth and good faith that gives Mithra his special character; but he is also invoked, like other divinities, as the protector of the needy,

'whom the poor man, who follows the teaching of righteousness, when wronged and deprived of his rights, with uplifted hands invokes for help' (Yt. x. 84), and his aid is sought 'in both worlds, in this world of the body, and in the world of the spirit' (*ib.* 98).

The last trait may remind us that among the functions of Mithra was that of assisting the souls of those departed in the faith on their journey to Paradise.

He is implored to 'be present at our sacrifice, come to our libations . . . bear them for atonement, lay them down in the House of Praise' (Yt. x. 32).

It is natural, therefore, to find as his companions Sraosha ('obedience') and Rashnu ('justice'), who, in later Zoroastrianism,² are found beside Ahura Mazda in the Final Judgment. In the *Yasht*, however, they figure as his henchmen in the great struggle between the powers of light and darkness.

Mithra strikes terror into them, Rashnu strikes a counter-fear into them, Sraosha drives them together from every side toward the protesting angels' (Yt. x. 41).

Throughout the poem Mithra appears as pre-eminently a god of battles; he was, therefore, especially fitted to become, as he did in later times, the favourite deity of the Roman soldier. Of the

¹ *Hara berezaiti* is the name elsewhere applied to the peak upon which 'Ahura Mazda the Creator fashioned for Mithra a dwelling where is neither night nor darkness, nor chill wind, nor hot, nor death-dealing sickness, nor pollution wrought by demons, nor do mists rise thereon' (Yt. x. 50). To the Iranian this meant Mt. Alburz.

² See L. O. Casartelli, *Philosophy of the Mazdayasnan Religion under the Sassanids*, Bombay, 1889, pp. 79-81; Dhalla, *Zoroastrian Theology*, p. 239 f.; Cumont, *Textes*, i. 87.

ritual of Mithra-worship the *Yasht* tells us little; *haoma* (*q.v.*) and milk were offered to him in libation; and the Mazdayasnan is bidden to sacrifice 'beasts small and great, and birds that fly,' and to prepare himself for the sacrifice by ablutions and penance (Yt. x. 119-122).¹

4. External influences on Mithraism.—(a) *In Babylonia*.—The picture thus sketched—and nothing essential would be added by drawing on the later portions of the Avesta or the Pahlavi texts—is in many ways very different from that of Mithraism as known to us from the inscriptions and monuments of the Roman period, and the problem of accounting for the difference is one which the evidence at present available does not enable us to solve. It is, however, clear that the transformation was due partly to Babylonian influence, partly to contamination with beliefs current in Asia Minor. The former influence, no doubt, began to exert itself at an early date, since the confusion of which Herodotus was guilty, in identifying Mithra (as a supposed female divinity) with Ishtar, and the coupling of Mithra with Anāhita (*q.v.*), who, in spite of her associations with the Oxus, was a goddess of an easily recognized Semitic type, point to a close *rapprochement* between Persian and Babylonian cults. The most important feature of later Mithraism, due to Chaldaean influence, was the prominence of astrology. There is nothing to show that this was a feature of early Iranian religion, whereas we know that the observation of the heavenly bodies and the belief in their influence on the affairs of men were of great antiquity in Babylonia. When, therefore, we find the busts of sun and moon and the circle of the zodiac standing features in Mithraic monuments, we can have no doubt as to the ultimate source of this element; nor can it be questioned that the elaboration of a body of doctrine, expressed in and through myth and symbols, also took place in the Farther East, although the details of the process escape us. We can say no more than that the dualism of Iranian religion furnished a clue both to the cosmic process and to the destiny of the individual soul, and that the results which flowed from the doctrine were worked out in detail on the banks of the Euphrates. The brief account of Zoroastrianism given by Plutarch in the *de Iside et Osiride*² shows us how far the Magians had already carried the transformation of the simple Persian faith into that which meets us in the *Bundahishn* and other Pahlavi texts of the Sasanian era, and enables us to rely on these to some extent for the interpretation of doubtful details in the evidence. Essential features are: (1) the separation in the material universe of the province of Ahura Mazda, 'with-drawn beyond the sun as far as the sun is from the earth,' from that of Angra Mainyu, the prince of darkness, and the intermediate position of Mithra, the *mesotems*; and (2) the doctrine that the soul is a divine spark of light descending from the highest heaven and acquiring a gross and earthly envelope which taints it with corruption and makes its existence on earth a continual struggle with the power of evil. The moral consequences of this doctrine, particularly the inspiring conception of Mithra, the Mediator, as at once the commander under whom the individual shares in the fight against the prince of darkness and the Redeemer³ who grants to his faithful servants final deliverance from the body of death, followed by the return of

¹ At the close of the *Yasht* (x. 145; cf. 113) Mithra and Ahura are jointly invoked, just as Mitra and Varuna are in the Vedic hymns.

² Ch. xlv. f.

³ In a Manichaean Turfan fragment Mithra is designated as 'redeemer and benefactor' (*dōxtār ud wābār*, C. Salemann, *Manichäische Studien*, i. [Petrograd, 1908] 4 d, 2 [p. 6]).

the purified spirit to the sphere from which it came, we may believe to be characteristically Iranian; to Chaldaea we shall attribute the elaboration of the astrological dogmas connected with the influence exercised by the planets upon the soul in its passage through their spheres, and the prominence given to the conception of Destiny as revealed in the unchanging order of the heavenly process, carried on throughout unending time (*zwan akarana* in later Zoroastrianism). Fatalism was the necessary corollary of these doctrines; but its acceptance in theory did not prevent Mithraism from becoming an intensely practical creed, full of stimulus for the activity of the individual.¹

(b) *In Asia Minor.*—It is much more difficult to say what was the effect upon Mithraism of its diffusion throughout Asia Minor.² We have no contemporary evidence for the stages by which this took place, but it is at least probable that the later Achaemenian kings, who were, as we have seen, ardent votaries of Mithra and Anāhita—Artaxerxes Ochus is said³ to have erected statues of the goddess in many places—established the worship of these divinities in the outlying portions of their dominions. It was not long before they became assimilated to those which were indigenous to the land; Anāhita was readily identified with the Great Mother whose worship was so deeply rooted in Anatolia (see art. MOTHER OF THE GODS), and thus the way was paved for an alliance between Mithra and Cybele (*q.v.*). Mithra himself took the shape of Men in Pontus (see below), and was assimilated in art with Attis (*q.v.*), in spite of the profound differences of nature and function between the two. More than this we can hardly say, for the primitive features of Mithraic ritual, to be considered later, were not necessarily borrowed, but may go back to Iranian antiquity. The *taurobolium*, however, is believed by Cumont (*i.* 334 f.) to have been taken over by Mithraism from the cult of the Great Mother. The propagation of Mithraism in the West had its political as well as its religious side. One of the earliest conceptions of Iranian religion was that of the 'glory,' or *hvarēnō*.⁴ This was conceived as a kind of mystical effulgence or aureole derived from the heavenly light, and possibly borrowed some of its features from the widely diffused conception of the external soul. In the story of the Fall, embodied for the Iranians in the myth of Yima, sin entailed the loss of this precious talisman; and in the *Mihir Yasht* the *dush-hvarēnō*, 'he of evil glory,' is the man who 'thinks that Mithra sees not all his evil deeds and lying' (*Yt.* x. 105). But the *hvarēnō* was more especially the talisman of the royal house of Irān, and as such is the main subject of an entire *Yasht* (*Yt.* xix.), which deals with those who have or will possess it, beginning with Ahura Mazda himself and ending with Saoshyant, the future deliverer of the world from evil, but giving in the main, as Darmesteter points out (*SBE* xxiii. 288), 'a short history of the Iranian monarchy, an abridged *Shāh Nāmāh*.' Historically, therefore, the *hvarēnō* is the token of Iranian kingship and the talisman

which gives victory over the Turanian. Naturally enough, the Near Eastern dynasties which sprang from the wreck of Alexander's empire were anxious to secure this token of legitimacy, and were therefore fervent worshippers of Mithra, 'the spiritual *Yazata* who rides through all the Karshvars, bestowing the *hvarēnō*' (*Yt.* x. 16). The prevalence of this conception is but thinly veiled by the disguise which the *hvarēnō* attained among half-Hellenized Asiatics as the *Τύχη βασιλεως*. It was doubtless at the courts of these mushroom monarchs that the Hellenization of Mithraism, which was the indispensable condition of its further diffusion, was brought about. In this respect our most instructive monument is the enormous cairn set up by Antiochus I. of Commagene (69–38 B.C.) on the tumulus of Nimrūd Dāgh, on either side of which was a terrace with identical series of five statues.¹ These, as the king tells us in his inscription, represented (1) Zeus-Oromasdes (= Ahura Mazda), (2) Apollo-Mithras-Helios-Hermes, (3) Artagnes-Herakles-Ares (= Verethraghna, 'victory'), (4) Commagene, (5) Antiochus himself; of the last the king says that by setting up the fashion of his own form he has 'caused the honour of ancient deities to become coeval with a new *Τύχη*.' The identification of Mithras with three Greek divinities illustrates the elastic methods of syncretism; Hermes is probably chosen as the guide of souls in the world beyond the grave,² and, at the same time, it may be, with allusion to the planet assigned to him (in common with Apollo) by the Greeks, since Antiochus was a convinced astrologer and has left us his horoscope in relief on the retaining-wall of the terrace; yet Mithras is also, as so often later, identified with the sun himself. Antiochus's father, it may be added, was one of the numerous bearers of the name Mithradates; and another of the reliefs shows Antiochus clasping the right hand of Mithras, represented in Persian costume with the radiate nimbus. This grouping of the god with the ruler whom he protects is a motive which recurs in various quarters, especially, as M. I. Rostowzew³ has shown, in Scythia. On the coinage of Trapezus (Cumont, *ii.* 189–191) Mithras, in Persian costume, appears on horseback—in one instance flanked by the figures of Cantes and Cautopates (see below); hence we are able to recognize him in the mounted divinity (generally trampling on a prostrate foe) represented on various works of art found in the tumuli of the Scythian princes in the Caucasus and Southern Russia. A notable example is the silver *rhyton* from Karagodeushkh,⁴ where Mithra, holding sceptre and drinking-horn, is faced by a Scythian prince, also mounted, who uplifts his right hand in the gesture of adoration.

5. *Contact with Greece and Rome.*—It was in Asia Minor that Greek art was enlisted in the service of Mithraism and created the sculptural types which were diffused throughout the West and form the chief source of our knowledge of the cult. The group of Mithras the bull-slayer, to be described presently, though ultimately inspired by the bull-slaying Nike of the Athenian acropolis, is manifestly the creation of a Pergamene artist, and adorned every sanctuary of Mithras. In spite of this fact, however, it is to be noted that Mithraism never became popular in Greek lands; it is not found, e.g., at Delos, where so many foreign cults flourished in the later Hellenistic age, and its

¹ For this inscription see K. Humann and O. Puchstein, *Reisen in Klein-Asien und Nord-Syrien*, Berlin, 1890, p. 262 ff., and cf. Cumont, *ii.* 89–91, 187–189.

² Cf. the dedication 'Deo invicto Mithrae Mercurio' found at Stockstadt together with a statuette (F. Drexel, *Das Kastell Stockstadt*, Heidelberg, 1910, p. 88; Cumont, *Mystères*, p. 146).

³ *Fredastelenie o monarchicheskoi vlasti v Skithii i na Bospor*, Petrograd, 1913, p. 4 ff.

⁴ *ib.* pl. i. 1.

¹ 'Astral theology' as a system is foreign to the Avesta; the worship of Tishtrya (= Sirius), to whom *Yt.* viii. is addressed, forms no real exception to this rule. Of the constellations only the Great Bear is mentioned in this hymn (*Yt.* viii. 12).

² That Mithraism came to Asia Minor from Semitic sources is proved by the Greco-Aramaic bilingual inscriptions of Cappadocia, in one of which (from Rhodanos) a Persian records how he *ἱερεύει μίθραν* (*Comptes rendus de l'acad. des inscriptions*, 1908, p. 484), and also (as Cumont points out) by the fact that the form *Mayvoraioi* is a transliteration from the Aramaic.

³ Clem. Alex. *Protrept.* 5.

⁴ The word appears in the compound names which the Greeks wrote *Μιθρα-Φόρος*, *Μιθρα-Βαχός*, etc. Cf. for other names Justi, pp. 90–98, 178, 181 f., 498. On the 'glory' itself see especially E. Wilhelm, 'Hvarēnō', in *Sir Jamsetjee Jeejeebhoy Madressa Jubilee Vol.*, Bombay, 1914, pp. 159–166.

traces are rare (and generally of Imperial date) throughout the Hellenized East, in Syria, Egypt, etc. Even in the 2nd cent. A.D. Lucian writes of Mithras as a barbarian god, οὐδὲ ἐλλήνισεν τῇ φωνῇ (*Deorum Conc.* 9).

The cult of Mithras is said by Plutarch (*Pomp.* 24) to have been brought to Rome by Cilician pirates taken captive in 67 B.C., and there is no reason to doubt the statement; but it certainly failed to achieve the popularity already attained by some other Oriental religions until almost the close of the 1st cent. after Christ, for the earliest Mithraic inscription as yet found in Rome was set up by a freedman of the Flavian dynasty (*CIL* vi. 732=Cumont, ii. 105 f.), and, although the British Museum contains a statuary group of Mithras and the bull dedicated by a slave of Ti. Claudius Livianus, *praefectus praetorio* in A.D. 102 (Cumont, ii. 228; cf. 106), Mithraic monuments and inscriptions do not become common in the West until the Antonine period.

6. Diffusion in the Roman world.—(a) *By the army.*—The diffusion of Mithraism was largely the work of the army. Pontus, Cappadocia, Commagene, and Lesser Armenia—precisely those regions in which the specialized form of the cult had been developed—were recruiting-grounds largely drawn upon by the Romans, even while as yet only client-kingsdoms of the empire, and still more when they were annexed and became provinces. During the Parthian wars under Claudius and Nero a considerable Oriental element thus entered the service of Rome, largely as auxiliaries, but also in the legions. Whether or no the soldiers of the Third Legion who saluted the rising sun at the second battle of Betriacum (A.D. 69) were Mithraists, it is at least certain that the Fifteenth, which served in the Parthian wars of Nero and was transferred by Vespasian to the Danube, brought the cult of Mithras to its camp at Carnuntum in A.D. 71. Another important centre of the cult in the same region was Aquincum, the headquarters of Legio II. Adjutrix, founded by Vespasian from the sailors of the Ravenna fleet, who, as freedmen, were doubtless in many instances of Oriental birth. But the wide spread of Mithraism on the frontiers was largely due to the auxiliary corps—*alae* and *cohortes*—raised in the East under the Flavian and succeeding dynasties and used to garrison the line of the Danube and the Rhine or the Vallum in Northern Britain. Except for a relief found in London (Cumont, ii. 389 f.), all the Mithraic monuments and inscriptions found in Britain belong either to the legionary camps at Isca (Caerleon-on-Usk [*CIL* vii. 99=Cumont, ii. 160]) and Eboracum (York [Cumont, ii. 391 f.]) or to the forts on or near the wall, such as Boreovicum (Housesteads [*CIL* vii. 645-650=Cumont, ii. 161, 393-396]), Amboglanna (Birdoswald [*CIL* vii. 831=Cumont, ii. 162]), Brementum (High Rochester [*CIL* vii. 103=Cumont, ii. 162]), Vindobala (Rutchester [Cumont, ii. 392 f.]), and others. So, too, in the Two Germanys the sanctuaries of Mithras (with some few exceptions¹) are found either in legionary camps, such as Vetera Castra, Bonna, and Moguntiacum (Cumont, ii. 389, 385 f., 381-383), or in the forts along the *limes Germanicus*, where they are lacking in none of the principal posts—Butzbach, Friedberg, Saalburg, Hedderheim, Grosskrotzenburg, Osterburken, Bockingen, Murrhardt (ib. ii. 354-360, 472 f., 362-381, 351-354, 348-351, 154), and others. We have already mentioned the military settlements of Carnuntum and Aquincum, on the Upper Danube, as centres of Mithraism; the same might be said of practically every important post on that river down to its mouth—e.g., Vindobona, Brigetio,

Viminacium, Oescus, Durostorum, and Troesmis (ib. i. 363, ii. 329, 275, 130, 489 f., 272), to name the principal centres. In Africa also the camp of the Third Legion at Lambaesis, and several military posts, such as Masecula and Sitifis (ib. ii. 168, 170, 405 f.), have furnished Mithraic monuments; and in the countries where traces of Mithraism are relatively rare they are often found in the colonies of veterans—e.g., Emerita (Merida) in Spain¹ (ib. ii. 166) and Patrae in Greece.

(b) *By slaves.*—Next in importance to the army, in the diffusion of Mithraism, came the slave population employed by the State, the municipalities, or private individuals. The first class comprises more especially the employés of the custom-houses and the State-properties, such as mines and quarries. Thus in the Danubian provinces, especially Dalmatia and the Pannonias, the *stationes* of the customs-barrier at which the *vectigal Illyrici* was levied have furnished a number of Mithraic dedications, due to slaves and freedmen in the public service, several of whom bear Greek names and were, therefore, doubtless natives of the Eastern provinces. Again, the presence of numerous Mithraic monuments in Noricum (ib. ii. 150-152, 335-339, 472) is accounted for, not so much by the military occupation—though the station of Commagene, which clearly takes its name from an auxiliary regiment, forms a natural exception—as by the mines owned by the State in that province. In Italy the *servi publici* of the municipalities contributed largely to the spread of the religion. At Sentinum, which has yielded an inscription (*CIL* xi. 5737=Cumont, ii. 121) giving a list of thirty-five *patroni* of a Mithraic congregation, the slaves and freedmen of the municipality figure side by side with *ingenui*; at Nersae a slave employed as *arcarius* restored a Mithraeum (*CIL* ix. 4109 f.=Cumont, ii. 120). It goes without saying that private slaves—especially in the households of the wealthy in Rome itself—played a large part in the spreading of Mithraism.

(c) *By trade-routes.*—We may in part trace to imported slaves the spread of Mithraism along the trade-routes which were in communication by sea with the Eastern Mediterranean, though doubtless the merchants themselves were often worshippers of Mithras. Thus in the African provinces, apart from the military stations mentioned above, the only traces of Mithraism are to be found in such coast towns as Caesarea, Cirta, or Rusicade (Cumont, ii. 171, 168, 170, 406 f.); in Southern Gaul we can trace by the presence of Mithraic monuments the spread of the cult on the trade-route which followed the valley of the Rhone and in the towns of Narbonensis, which were always open to transmarine influence from their nearness to Massilia; and Aquileia, whence the trade of the Mediterranean found its way into Central Europe, was itself both a centre of Mithraic worship and a stage in its further diffusion. It is thus, e.g., that we must explain the remarkable prevalence of Mithraic monuments in the upper valley of the Adige and on the Brenner route to the Upper Danube, as well as on the North-Eastern route via Emona and Poetovio. No province of the empire is richer in remains of Mithraism than Dacia, where all the principal sites—Sarmizegetusa, Apulum, Napoca, Potaissa, etc. (Cumont, ii. 131-139, 280-306, 308-319)—have furnished material of this kind. We can hardly explain this entirely by the influence of the army which occupied Dacia and the neighbouring Danube provinces, and are forced to conclude that among the settlers planted by Trajan in the

¹ It may be noted that an officer of the Seventh Legion dedicated an altar in this sanctuary (*L'Année épigraphique*, 1905, no. 25). The finds have recently been published fully by Pierre Paris (*RA* ii. [1914] 1 ff.).

¹ Four out of twenty-six, according to Toutain (see below, p. 768*).

province and drawn 'ex toto orbe Romano' (Eutrop. viii. 6) were many Orientals who brought with them their native faiths, among which the worship of Mithras soon assumed a commanding position.

7. *Geographical and social distribution.*—The geographical distribution of the monuments of Mithraism may most easily be grasped by an examination of the map which accompanies Cumont's volumes, upon which the sites, when they have been found, are marked in red. It will be seen at a glance that, except in the places and districts of which mention has already been made, traces of the cult are few and far between. In Greek lands, in Western Gaul, and in Spain, taken together, the sites where its monuments have been found may almost be counted on the fingers. Hence Toutain¹ has argued that the cult of Mithras never became widely diffused in the West, outside the army and certain regions in direct communication with the East, and that the notion that it was at one time not far from achieving the triumph which was reserved for Christianity is much exaggerated. Toutain leaves out of account Rome and Italy—which makes his presentation of the evidence one-sided. But he endeavours to reinforce his argument by a consideration of the social condition of the adherents of Mithraism. He points out with justice that the dedicators of votive sculptures and the builders or restorers of Mithraic sanctuaries are very largely drawn from the official classes and provincial governors, military commanders, or *procuratores*, etc., employed in the civil administration. As early as the age of the Antonines we find *legati* and *tribuni militares* among the votaries of Mithras; in the reign of Commodus, M. Valerius Maximianus, governor of Dacia, dedicates an offering to 'Sol invictus Mithras' (CIL iii. 1122=Cumont, ii. 133); under Septimianus Severus, C. Julius Castinus, governor of Pannonia, consecrates an altar to Mithras (CIL iii. 3480=Cumont, ii. 141), and the number of similar instances is multiplied in the 3rd cent. after Christ, while imperial *procuratores* in Noricum and Dacia follow their example. It would be natural to infer that Mithraism was at least favourably regarded by the government; and, in fact, we learn from the *Historia Augusta* (cap. 9) that Commodus was initiated into the mysteries, while an inscription of the age of the Severi (CIL vi. 2271=Cumont, ii. 100) mentions a 'sacerdos invicti Mithrae domus Augustanae,' and the largest Mithraeum at present known was discovered in 1912 in the Thermæ of Caracalla; in this was found an inscription in honour of Zeus-Helios-Sarapis-Mithras,² and this unusual identification is explained by Caracalla's special devotion to the Egyptian divinity. This imperial patronage goes far to explain the popularity of Mithras-worship in the 3rd cent.; it also accounts for the fact that, though by no means confined to the public services, military and civil, it was mainly found among their members and took no general hold on the population of the western provinces, so that the withdrawal of imperial favour was a fatal blow.

8. *Grades of initiation.*—Our knowledge of the doctrines and ritual of Mithraism is largely drawn from the inscriptions and monuments discovered in the Mithraea, to the interpretation of which something is contributed by ancient texts, especially those of Christian apologists. The most important of these is a passage of St. Jerome (*Ep. cvii.*), who describes the destruction of a 'cave of Mithras' and the 'monstrous images' used in the initiation of the votaries, who are enumerated as follows: *Corax, Gryphus* (MSS *nymphus* or *nymphus*), *miles, leo, Peres, heliodromus, pater*. These names are

naturally taken to indicate seven grades through which the neophyte passed in succession; and this is confirmed by other texts. The inscriptions found in a Mithraeum in Rome (CIL vi. 749 ff.=Cumont, ii. 93 f.) mention ceremonies described by the words 'tradiderunt hierocoracia, leontica, persica, heliaca, patrica'; the adjectives clearly correspond with five of the grades mentioned by St. Jerome. We find also 'ostenderunt (or tradiderunt) cryfios (chryfios).'¹ The last word seems to be equivalent to *κρύβιος*, and has been substituted for the corrupt *nymphus* in the text of St. Jerome. The title *pater* (or *pater patrum*) for the highest grade is common in inscriptions; and a passage of Porphyry refers as follows to the others:

τοὺς μὲν μετέχοντας τῶν αὐτῶν ὀργίων μύστας λέοντας καλεῖν, τὰς δὲ γυναῖκας ναῖνας, τοὺς δὲ ὑπερηγουμένους κόρακας· ἐπὶ τῶν πατέρων . . . ἀετοὶ γὰρ καὶ ἰέρακες οὗτοι προσαγορεύονται· ὁ τὸ τὰ λεοντικά παραλαμβάνων περιτίθεται παντοδαπὰς ζώων μορὰς (de Abst. iv. 16).

We infer that the *κόραξ* was a low grade, and that initiation into the mysteries proper began with that of *leo* (cf. τὰς τὰ λεοντικά μυστούμενους [Porph. de Antro Nymph. 15]). The mention of women called *ναῖναι* stands alone; it has been proposed to read *καῖνας*, and some confirmation may be found in the discovery of a tomb at Oea in Tripoli in which a husband and wife were buried and described as *leo* and *lea* (*Comptes rendus de l'acad. des inscriptions*, 1903, p. 357 ff.). For the 'eagles' and 'hawks' independent evidence is not forthcoming, unless two inscriptions from Lycania which mention *derol* are Mithraic (cf. *Bonner Jahrbucher*, 1902, p. 12). Porphyry, it will be noticed, speaks of the animal disguises worn by the *leones*. In the *Questiones veteris et novi testamenti* falsely attributed to St. Augustine (PL xxxv. 2348) we read how 'some flap their wings like birds and imitate the voice of the crow; others roar after the manner of lions'; and the passages quoted are strikingly illustrated by a relief found at Konjica, in Bosnia, carved on the reverse of a slab which shows the usual subject of Mithra the bull-slayer (see below).

In the centre of the scene are two figures reclining on a couch, in front of which is a table with four leaves marked with a cross; beside the table are seen a lion and a bucranium. On either side are two figures; on the left a *κόραξ*, i.e. a man wearing the mask of a crow, and a 'Persian,' distinguished by his dress; to the right a *leo*, wearing a lion's mask, and a figure the upper portion of which is unfortunately lost. It will be noticed that the *miles* of St. Jerome does not appear in the other sources—though the use of the term in Mithraism is confirmed by a passage of Tertullian (*de Praescr. Haer.* 40) and by the title *miles plus* in two inscriptions from Wiesbaden (CIL xiii. 7570, 7571), in Greek *στρατιώτης εὐσεβής* (inscription of Amasia, *Recueil des inscr. du Pont*, Brussels, 1910, 108). It is possible, therefore, that the mutilated figure of the Konjica relief represents the *cryfios*, and that the *miles*, though he belonged to the rank and file of Mithras's soldiery, was not admitted to partake in the mysteries. He was, however, initiated by a ceremony described by Tertullian (*de Corona*, 16); a crown was set before him, *interposito gladio*, and then placed on his head, but removed by the neophyte, who exclaimed 'Mithras is my crown.'

In the passage previously quoted Tertullian speaks of a soldier of Mithras as 'branded in the forehead'; and the *καύσεις μυστικάλ* of which Gregory of Nazianzus speaks (*Orat.* iv. 70 [PG xxxv. 592]) may refer to this. Tertullian (*de Bapt.* 5) also mentions a Mithraic purification 'per lavacrum' resembling the rite of baptism; and it is to be noted that the Mithraea which have been excavated either contain natural springs or have water specially laid on. Of the ceremonies which accompanied the higher degrees of initiation we know little; Porphyry (*loc. cit.*) tells us that the *leo* had both hands and tongue purified with honey, which was also used in the initiation of the *Persa*. In the passage quoted above Gregory of Nazianzus mentions the *βάσανοι* to which the initiates were sub-

¹ *Les Cultes païens dans l'empire romain*, ii. 144 ff.

² *Notiae deph Scavi*, 1912, p. 323.

¹ A relief from Arçer, now at Sofia (ARW xv. [1912] pl. i. 4), shows a kneeling figure wearing the 'Phrygian' cap, partly hidden by a veil held by two other figures. Rostowzew (p. 58) explains this with reference to the phrase quoted in the text.

jected; and his commentator Nonnus (*PG* xxxvi. 989, 1009, 1012) enlarges on this topic and speaks of 'eighty punishments' by water and fire, frost, hunger, thirst, and journeyings, in an ascending scale of severity. These may to some extent be imaginary; but it must be remembered that the *Mithr Yasht* (§ 122) speaks of ablutions and stripes. Tertullian (*de Praescr. Haer.* 40) uses the phrase 'imago resurrectionis,' which suggests a simulated death; and the biographer of Commodus tells us that the emperor 'sacra Mithriaca vero homicidio polluit.'¹ Thus the little that we know of the Mithraic rites of initiation shows that they were of a type well known in primitive religion, and carry us back to a stage far earlier than the developed theology of later Iranian times. Nor can we say more of the rites in which the initiates partook; Christian writers found an analogy to the eucharist in the Mithraic communion of bread and water (*ἀρτος καὶ ποτήριον ὕδατος* [Justin, *Apol.* i. 66], *panis oblatio* [Tert. *loc. cit.*]), which seems to be represented on the Konjica relief.

9. Sanctuaries, ritual, and monuments. — The central act of worship in Mithraism, however, appears to have been the sacrifice of the bull, the prototype of which was the slaying of the bull by Mithra himself, represented in relief in every Mithraic sanctuary. These places of worship were described by the term *spelæum* (*CIL* iii. 4420 = Cumont, ii. 146), for which we also find *crypta* (*CIL* iii. 1096 = Cumont, ii. 132) and *antrum* (*CIL* vi. 754 = Cumont, ii. 94), and were often established in natural caves or grottoes, as, e.g., on the north slope of the Capitol at Rome, beneath the church of Araceli. As a rule, however, the place of the grotto was taken by a subterranean crypt, approached by a stairway; the chapels attached to private houses were naturally placed in cellars—e.g., the Mithræum below the church of San Clemente in Rome. It should be noted that the Mithræa are never of great size, and, where the adherents of the worship were numerous, the number of *spelæa* was multiplied. Thus Ostia possessed five, Aquinum at least four, and Carnuntum three sanctuaries. The more elaborate examples show a fore-court, or *pronaos* (the term is used in *CIL* xiv. 61), leading to a small chamber, whence the staircase descended to the crypt in which the mysteries were celebrated. This was traversed by a central passage, on either side of which were *podia* about six feet broad with inclined surfaces. Whether, as Cumont supposes, the worshippers knelt upon these, or reclined upon them while partaking of the ceremonial banquet, it is hard to say. At the extremity of the crypt, which often took the form of an apse (called *œdrea* in *CIL* iii. 1096), was placed the relief of Mithras and the bull, often accompanied by other sculptures, such as figures of Cautes and Cantopates or the lion-headed Kronos.

The symbolism of these monuments is not easy of interpretation, and ancient texts help us little. In the central scene, the type of which (as was mentioned above) was certainly fixed by a Pergamene artist, probably in the 2nd cent. B.C., Mithras, clothed in the conventional costume which in Greek art signified the Oriental, places his left knee on the back of a bull, and, seizing its horn (or muzzle) with the left hand, plunges a knife into its throat.² The scene of the action is a cave, the prototype of the *spelæum*, which sometimes contains plants or

¹ *Vita Commodi*, ix. 8. The statement of Socrates (*HE* iii. 2) that human sacrifices were offered in Mithraism is unworthy of credence.

² In the best examples Mithras wears an expression of pathos, as though he were the unwilling instrument of heaven; A. Loisy (*RHR* lxxvi. [1913] 538) suggests that this is because god and victim are, in a sense, one; but this seems fanciful. The 'Alexandroid' type used by the artist was a 'romantic' creation.

even trees. A scorpion fastens on the testicles of the dying bull, while a dog, and usually a serpent also, drink the blood which flows from the death-wound. A crow is almost always present, perched either on Mithras's mantle or on the edge of the cave. Finally, we have a significant detail in the ears of corn in which the tail of the bull terminates (or which, in some instances, spring from the wound). In interpreting the scene we must also take into account a second representation with which the reverse of the slab is decorated at Heddernheim (Cumont, ii. pl. viii.). Here Mithras stands beside the body of the slain bull, holding a drinking-horn in his left hand and receiving from the hands of the sun-god a bunch of grapes. On either side are the figures of children holding baskets of fruit; in the background a radiate cap is planted on a pole; and in an upper register we have a scene in which a central figure, unfortunately defaced, is surrounded by animals (dogs, wild boar, sheep, ox, possibly horse). The explanation of these scenes can hardly be doubtful. We read in the *Bundahishn* (esp. xiv. 1) of the bull which was the first creation of Ahura Mazda, and was slain by Ahriman, but through its death gave birth to vegetable life on the earth; from its spinal marrow 'grain grew of fifty-five species, and twelve species of medicinal herbs.' Moreover, its seed was 'carried up to the moon, where it was purified and produced the manifold species of animals' (*ib.* 3). From its blood, again, sprang 'the grape-vine from which they make the wine' (*ib.* 2). Though we cannot definitely trace this cosmogony to earlier Avestan sources, it is indubitably of great antiquity; and the Mithraic monuments offer a remarkable modification of it. Here the central doctrine that the death of the bull was the source of life, both animal and vegetable, remains the same; but the killing of the animal is not the act of the evil spirit, but a sacrifice performed by Mithras himself, probably acting as the minister of Ahura Mazda, whose messenger we may see in the crow.¹ The function of the creatures of Ahriman (scorpion and serpent) is limited to that of endeavouring to nullify the miracle in process. But the significance of the scene was not only cosmological; it was also eschatological, for the new creation to which the Zoroastrian looked forward at the end of time was to be heralded by the sacrifice of a second bull, this time by the 'redeemer' (Saoshyant) (*Bundahishn*, xxx. 25). Nor can we doubt that these myths, like so many others, were interpretations of a rite older than mythology, and that the sacrifice of the bull was in origin intended to promote fertility and ensure the annual renewal of life on the earth, the bull being chosen as the victim on account of his great generative power.

10. Myth.—The myth of which Mithras was the hero and the slaying of the bull the culminating episode can no longer be reconstructed in its details, but many of its episodes are represented on the monuments. The reliefs of the bull-sacrifice are often enclosed in a framework broken up into small panels, on each of which an episode of the myth is shown. The chief of these are the following.

(1) *Birth of Mithras from the rock*.—On several monuments the figure of the god is seen emerging from a rock, the 'petra genitrix' of several inscriptions (*CIL* iii. 8679 = Cumont, ii. 139, etc.); cf. the expressions *ὄδὸς ἐκ πέτρας* (Firmicus, *de Err. prof. relig.* 20), *πετρὸγενὴς Μίθρας* (Lyd. *de Mens* iii. 26), etc. The scene is sometimes completed by the addition of a shepherd or shepherds who witness the miraculous birth.

(2) *Mithras and the tree*.—On some monuments the figure of Mithras is seen half-concealed by a tree from which he seems to be emerging, or, again, which he is stripping of its foliage. The first might be considered as a variant of the birth-scheme, if it did not occur on the same monuments; in any case, it seems to show that Mithras was on one side a vegetation-spirit.

(3) *The archer and the rock*.—Mithras, in Oriental costume,

¹ For the crow in Zoroastrian literature cf. *Bundahishn*, xix. 22.

discharges an arrow at a rock, from which a stream gushes out; a kneeling figure receives the water in his hands or refreshes his throat. Sometimes a suppliant kneels before Mithras and implores him to perform the miracle.

(4) *Mithras and the sun*.—Here there is a series of scenes, of which the following are the most important: (a) investiture of the sun by Mithras; the sun-god kneels before Mithras, who places the radiate crown on his head with the left hand, while in the right hand he holds an indistinct object, probably a drinking-horn; (b) alliance of Mithras and the sun; the two figures are represented clasping the right hand in token of friendship; (c) Mithras conveyed in the sun's chariot across the ocean, represented as a reclining figure in the style of Greek art; (d) banquet of Mithras and the sun (sometimes with other guests); they recline on a couch, generally holding drinking-horns, and before them is a small table with viands.

(5) *Mithras and the bull*.—Though the slaying of the bull is never found except as the principal scene, other episodes of the legend are often used in the decoration of the side-panels. The following are the chief: (a) and (b) the bull in a boat, the bull issuing from a gabled building; these two scenes, when found on the same monument, are always in juxtaposition, in one case (a relief found at Saarburg in Lorraine) two figures in Oriental costume are setting fire to the building; (c) the capture of the bull; this is represented in a series of scenes, which display, first the bull at pasture, then Mithras seizing it by the horns, vaulting on its back and riding on it, and eventually either carrying it on his shoulders or, more often, dragging it by the hind-legs, while its fore-feet hang on the ground; the last scene seems to be described by the word *transitus* (CIL iii. 14364, 27 and 28).

(6) *Scenes in which Mithras takes no part*.—These are either simple representations of other divinities in the form given to them by Greek art, such as the unexplained head of the Osterburken relief (perhaps = Kronos), the figures of the Earth-goddess, of Atlas, of Oceanus, and the three Fates, or scenes in which Zeus is shown, either receiving the thunderbolt as the symbol of power at the hands of Kronos or in combat with the giants.

No successful attempt has been made to explain the series of representations just described; the last class, no doubt, clothe in Greek form conceptions derived from Persian sources, the identification of which can at best be a matter of guess-work.¹ We can, however, be certain that, whatever the original content of the Mithraic legends, it had been profoundly modified by the astral religion of Babylonia. Mithras, as we saw, was by origin a god of the heavenly light; and it is possible that his birth from the rock may symbolize either the appearance of the dawn on the mountain-tops or the effulgence of light from the vault of heaven conceived as a solid dome. At any rate, there can be no doubt as to the meaning of the two torch-bearers, dressed in the same Oriental costume as Mithras himself, who regularly appear on either side of the scene of the bull-slaying, and are also found at the birth of Mithra. One holds his torch aloft, the other lowers it, and these actions clearly symbolize the rising and setting of the sun,² so that Mithras and the torch-bearers form a triad hinted at in the phrase *Μίθρας τριπλόσιος* (pseudo-Dionys. Areop. Ep. vii. 2).³ But the monuments show that the heavenly phenomena played a still more important part in Mithraism. Mention has been made of the lion-headed figure of human form, wrapped in the coils of a serpent, of which a large number have been found in Mithraea. The figure often has four wings and holds in its hands a pair of keys, or a sceptre and thunderbolt. The symbolism of the figure would be easy of comprehension even apart from the fact that we find the signs of the zodiac engraved on its body in some instances. It represents eternal time, the *zwan akarana* which became the chief divinity in one of the theological systems that sprang up in the bosom of later Zoroastrianism, and seems to have been described in Greek as *Κρόνος*, though we have no direct proof of this.⁴

¹ Explanations differing in some respects from those of Cumont are given by Toutain, *RHR* xiv. [1902] 146 ff.

² But see also § 9 *sub fin.*

³ No explanation can be given of the names *Cantes* and *Cantopates* applied, as the inscriptions show, to these figures; that they were by-forms of Mithras himself is proved by the full expression 'Deo Mithrae C(autio)p(ati) S(oli) Kvictio', e.g. CIL vii. 650=Cumont, ii. 161.

⁴ F. Legg (*PSBA* xxxiv. [1912] 188 ff.) prefers to see in this

The zodiac is also commonly found either as a framework enclosing the scene of the bull-slaying or, as in most of the reliefs from the *limes Germanicus*, as a border to the upper edge of the *spelaeum* in which this takes place. In addition to this, the more elaborate reliefs are almost always decorated with busts of sun and moon, while many also exhibit the planets, or symbols which represent them.¹ We also find the seasons and the winds; and it is beyond doubt that the lion,² the crater,³ and the serpent must be combined with these last as emblems of the elements. It may be added that the sea (*oceanus*) and heaven (*caelus*) are both mentioned on a stele from Hedderheim (Cumont, ii. 156). It is clear, therefore, that in the Mithraic mysteries a complete system of cosmography was taught; nor can there be any doubt of its application to the soul and its destiny. The doctrine of the microcosm, which pervades all the speculations of later antiquity, was popularized by the Stoics, especially by Posidonius, and, together with the astrological doctrines which accompanied it, was derived from Oriental sources. It formed part of the common stock of teaching imparted to the votaries of the various 'other-worldly' religions (of which Mithraism was one) which became diffused throughout the West from the beginning of the Christian era onwards. We should be able to give a more definite account of Mithraic eschatology if we could assume that the 'Mithrasliturgie' published by Dieterich from the Paris magical papyrus (*Bibl. Nat. Suppl. Grec.* 574) deserved that name. This document, committed to writing about A.D. 300, is in its present form part of the stock-in-trade of an Egyptian magician, and is interspersed with *voces magicae* and supplemented by directions for its use in the *séances* of this practitioner. The question is whether the compiler made use of a genuine Mithraic document; this is suggested by the opening words, which may be translated as follows:

'Be gracious unto me, Providence and Fortune, to me, who am writing down these, the first of all traditional mysteries, and grant immortality to my only child, an initiate worthy of this mighty power, which the Great God, the Sun, Mithras, bade his archangel transmit to me, that I alone, an eagle, might soar through the heavens and behold all things.'

It is to be noted that this private revelation made by the initiator to his 'only child' resembles those of the *Corpus Hermeticum* (the product of an Egyptian school of theosophy) rather than the ritual of a community; also that the 'eagle' is introduced into the text by a conjectural emendation of Dieterich. In the revelation itself we find nothing that distinguishes Mithraism from other theosophies, and a good deal which is definitely Egyptian; Dieterich lays stress on the 'golden shoulder of the ox, which is the Great Bear,' which he would recognize in the object held by Mithras in the investiture of the sun as represented on a relief from Virunum (Cumont, ii. 336, fig. 213); but the identification is extremely doubtful; other examples of the same subject show nothing at all resembling an ox's shoulder, and in any case the conception is specifically Egyptian. On the whole, therefore, it is safer to regard the papyrus as figure a representation of Ahriman, whose worship by Mithraists is attested by dedications 'deo Arimano' (Cumont, ii. 98, 141). A mutilated relief at York (Cumont, ii. 393) seems to represent this figure with some variation from the usual type, and the inscription (also mutilated) contains the name ARIMANIVS.

¹ On a relief from Apulum (Cumont, ii. 311) we find a series of the following four objects: (a) sacrificial knife, (b) altar, (c) pila, (d) tree, repeated seven times. These symbols represent the elements, and their repetition indicates that each planet contained all four.

² 'Ardentis naturae sacramenta leones Mithrae philosophantur' (Tert. adv. Marc. i. 18).

³ κατὰ τὸ Μίθρα ὁ κρατὴρ ἀντὶ τῆς πυγῆς τέτακται (Porph. de Antro Nymph. 18).

nothing more than a syncretistic product.¹ It is likely enough, however, that the ascent of the soul through the seven spheres was taught in the Mithraic mysteries; Celsus (*ap. Origen, c. Cels. vi. 22*) explicitly tells us of a 'ladder with seven gates' made of the seven metals assigned to the planets which was shown to the initiates; Porphyry, quoting a certain Eubulus, who attributes to Zoroaster the doctrine that the 'cave' was a symbol of the universe, of which Mithras was the creator, speaks of it as containing *κατὰ συμμετρους ἀποστάσεις σύμβολα τῶν κοσμικῶν στοιχείων καὶ κλιμάτων*; and it can be no accident that in one of the Mithraea at Ostia six semi-circles are traced on the floor of the central passage, while six planets are represented on the walls of the *podia* and the signs of the zodiac on their upper surface (Cumont, ii. 243-245). Beyond this all is speculation; and Porphyry himself probably knew little more than we do, for he mentions (*de Abst. iv. 16*) as his chief authority on the mysteries a certain Pallas, who explained the animal disguises worn by the initiates either as symbols of the zodiacal constellations or as shadowing forth the doctrine of metempsychosis (which Eubulus also stated to be Mithraic). It is not necessary to repeat the astrological speculations, confused in themselves, by means of which Porphyry endeavours to interpret the symbols of Mithraism; but there can be no doubt that the all-pervading influence of astrolatry affected Mithraic doctrines. Thus we sometimes find that the figures of Cautes and Cautopates hold the symbols of the bull and the scorpion, the signs which mark the beginning of spring and winter.

11. Final phase.—In its final phase Mithraism was absorbed into the 'solar pantheism' which supplied Roman society in the 3rd and 4th centuries with a theology reconciled with contemporary philosophy and science, and became, under Aurelian, the official religion of the Roman State.² 'Sol invictus,' as the ruler of the universe was called in a phrase of Oriental associations, was represented on earth by the emperor, and his identification with Mithras was far easier than many others which syncretism was able to effect. Thus 'invictus Mithras,' 'deus invictus Mithras,' or (in full) 'deus Sol invictus Mithras' became the commonest title of the god. It was with this modification that Mithraism bade fair during the last quarter of the 3rd cent. A.D. to become a world-religion. The State-cult of Sol was no more fitted than the worship of the emperor to satisfy the religious instinct; but Mithraism could supply the defect through its mystical teaching and its ties of brotherhood; and it was, besides, *par excellence* the religion of the army and the official classes. In A.D. 307 Diocletian, Galerius, and Licinius, meeting in conference at Carnuntum, dedicated an altar to Mithras, 'fautori imperii sui,' in one of the oldest centres of his worship in the empire; but the victory of Constantine dispossessed him in favour of a rival creed, which had struck its roots more deeply in those populations of the empire which were less immediately in touch with the legions and the official hierarchy. It became clear that the vogue of Mithraism was in large measure an artificial one, created by the

powerful machinery of the imperial government. When Mithraism sank from a position of privilege to one of toleration, and before long became an object of persecution, its days were numbered. It lingered on, on the one hand, in certain less civilized outposts of empire and in the Alpine valleys, while, on the other, it became the symbol of a lost cause to the group of cultured pagans which maintained the defence of paganism in the senate-house. The emperor Julian, whose oration, *εἰς βασιλέα* "Ἡλίου," is a characteristic exposition of 'solar theology,' was a votary of Mithras; but his attempt to revive the defunct creed of the pagan emperors and to give it an organization resembling that of Christianity was still-born. After his death persecution began in earnest, and, as far as the evidence enables us to judge, the destruction of Mithraea was wide-spread during the reign of Gratian. The letter of St. Jerome quoted above, which enumerates the seven Mithraic grades, describes such an act performed in Rome by Gracchus, *praefectus urbi* in A.D. 377. The latest inscriptions in which Mithras is named are those of the group of senators belonging to the society of which Macrobius's *Saturnalia* gives us a picture. Vettius Agorius Prætextatus († A.D. 385) is called 'pater sacrorum' (*CIL vi. 1779*=Cumont, ii. 95) and 'pater patrum' (*CIL vi. 1778*=Cumont, ii. 95), and these inscriptions are the latest datable evidences of the cult. The measures of Theodosius gave the death-blow to the practice of pagan worship; and the Mithraeum at Saarbûrg in Lorraine was destroyed in his reign.

12. Relations with other cults.—Mithraism lent itself readily to alliances with other worships, especially those of female divinities, which supplied what it was unable to offer to women; and it seems to have been specially associated with the cult of the Magna Mater. We find their sanctuaries adjoining each other at Ostia and on the Saalburg; dedications are commonly made simultaneously to both divinities; and the *taurobolium*, which (whatever its origin) was certainly attached to the worship of Magna Mater in the West, received an added significance when interpreted in terms of Mithraism, in which the life-giving blood of the bull became the pledge of immortality. In the Danube region a curious by-form of Mithraism is revealed to us by a series of reliefs and leaden plaques which have been interpreted by Rostowzew in the article (in Russian) quoted above. Here a female goddess, whose attribute is a fish, no doubt a local derivative of Anāhita, is accompanied by two mounted figures, in whom we must recognize a duplication of the horseman Mithras found on the coasts of the Black Sea.

LITERATURE.—The great work of Franz Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra*, 2 vols., Brussels, 1896-99, supersedes all previous treatises, a list of which he gives in vol. I. p. xxix.; he has also published an abridgment of his larger work under the title *Les Mystères de Mithra*, Paris, 1912, in which the bibliography of the subject is brought up to date; the earlier editions of this work have been translated into English and German. Among recent works the most important are A. Dieterich, *Eine Mithrasliturgie*² (ed. R. Wünsch), Paris and Berlin, 1910, and J. Toutain, *Les Cultes païens dans l'empire romain*, Paris, 1908-11, vol. II. ch. iv. 'Le Culte de Mithra.' Other works and articles dealing with special points are referred to in the course of the article. For the Vedic Mitra see A. A. Macdonell, *Vedic Mythology*, Strassburg, 1897, §§ 13, 44, and authorities there cited, especially A. Hillebrandt, *Varuṇa und Mitra*, Breslau, 1877; H. Oldenberg, *Die Religion des Veda*, Berlin, 1894; A. Eggers, *Der arische Gott Mitra*, Dorpat, 1894. For the Avesta Mithra see especially M. N. Dhalla, *Zoroastrian Theology*, New York, 1914, pp. 103-111. H. STUART JONES.

MOAB.—The name 'Moab,' like that of the neighbouring peoples, Israel, Edom, Ammon, Aram, etc., appears to have been the name of a race rather than of a district, for, as G. A. Smith has pointed out (*EBi*, art. 'Moab,' § 1), in Nu

¹ We do not even know what was the language officially used in the Mithraic communities. The inscriptions are naturally for the most part in Latin. Some Persian words occur—e.g., *nabarzē* (usually connected with Pers. *nabard*, *nabardah*, 'courageous'; this etymology, proposed by G. Kuun, *Arch. epigr. Mitteilungen*, vi. [1882] 107, is uncertain because of the Pahlavi form, *n(s)part*, 'battle', Persian was scarcely spoken as early as the Mithraic period), as an epithet of Mithras, and *nama sebesti*, where *nama* probably = 'praise' (cf. Cumont, i. 314, note 2).

² *de Antro Nymph. 6*.

³ For this see esp. Cumont, 'La Théologie solaire,' *Mémoires présentés à l'acad. des inscriptions*, xii. [1909].

21¹¹⁻¹⁵ (cited by F. Brown, S. R. Driver, and C. A. Briggs, *A Heb. and Eng. Lexicon of the Old Testament*, Oxford, 1906, p. 555, as evidence that the name Moab = 'territory of Moab'), in v.¹⁵ Moab is parallel to the Gentile Amorite; in v.¹⁶ also it is the people.' The derivation and meaning of the name are unknown. The etymology מואב, 'from my father,' given in Gn 19³⁷ (LXX), which doubtless gave rise to the malicious story of Moab's origin, is merely popular. Since Moab and Ammon are represented as related to Israel through Lot, Abraham's nephew, whereas Esau is Jacob's twin brother, we may conclude that at the time when these stories took shape the Israelites considered that the Moabites and Ammonites, though of kindred stock, were by no means so closely related to them as Edom. Moab is said to be descended from Lot's elder daughter (Gn 19³⁷); therefore it was probably supposed that the settlement of Moab preceded that of Ammon. Whether the Moabites themselves possessed any tradition of amigration from Mesopotamia may well be doubted, the statements of Gn 11³¹ 12^{4c} being perhaps mere inferences from the belief that the Israelites were connected with Mesopotamia. Since, however, the expression 'children of Lot' (Dt 2^{2a, 19}, Ps 83³) scarcely rests directly upon Gn 19^{37a}, Lot was probably more prominent in early times than the OT as a whole would imply; but whether the Moabites and Ammonites regarded themselves as 'children of Lot,' or succeeded them in the districts which they occupied, cannot be determined. The late antiquarian note in Dt 2¹⁰ implies that the population of Moab was not altogether homogeneous, while the place-names clearly show Canaanite influence.

The constant boundary of Moab on the west was the Dead Sea and the Jordan; the north, east, and south frontiers varied from time to time. Probably the Wādy el-Hāsy represents the farthest extent of Moabite territory to the south and the Hajj road that to the east. The Wādy Nimrin, some 8 miles north of the Dead Sea, may be taken as the extreme northern limit (see G. A. Smith, *op. cit.* § 2).

Beyond the mere mention of Moab as included in the conquests of Ramses II. nothing is known of its history before the period of the Israelite invasion of Palestine. According to Nu 21²¹⁻³¹, shortly before the arrival of Israel, an Amorite king, Sihon, seized the Moabite territory north of the Arnon. What circumstances determined the Israelite invasion of Palestine from the east is not certainly known, but it is not unlikely that the Israelites attacked Sihon in response to an appeal from the Moabites (as Wellhausen, *EB*,², art. 'Israel,' has suggested), and that it was only after the defeat of Sihon that the Moabites discovered that their allies had no intention of giving up the fruits of their victory. There is certainly no valid reason for disputing the general historicity of the tradition. The statement that Reuben was the first-born son of Israel naturally implies that Reuben was the first tribe to obtain a settlement, while the assignment of Moabite territory to Reuben, and the belief that Moses died and was buried there, as well as the tradition that the Israelites crossed the Jordan near Jericho, all point to a belief that N. Moab was occupied at least for a time by Israel. After the invasion of W. Palestine, however, the Israelites were disintegrated and engaged in a perpetual conflict with the Canaanites, Philistines, etc. (see art. ISRAEL), with the result that the Moabites were able to recover their own. The tribe of Reuben, in spite of its reputation for bravery, was nearly exterminated (Gn 49³⁴, Dt 33⁹), and Moabite rule was extended even over the Jordan valley west of

the river. For a time, indeed, Moabite aggression was checked by Ehud, but we find Israel and Moab again at war during the reign of David, and perhaps also during that of Saul.¹ But, although David's treatment of Moab is said to have been drastic enough, Moab was not incorporated in Israel. The Moabites merely 'became servants to David, and brought presents' (2 S 8²). It may be inferred that Reuben had already been nearly exterminated or practically absorbed in Moab. Whether Moabite influence was strong in Jerusalem in the days of Solomon, notwithstanding 1 K 11^{1-8, 33}, is very doubtful; Solomon's idolatry is described in terms of a later age. It was probably during his reign or that of Rehoboam that Moab recovered independence.

Under the vigorous rule of Omri the Moabites again felt the hand of Israel. According to the inscription of Mesha (found at Dībān [Heb. Dībhōn] in 1868, commonly called the Moabite Stone), the period of Israelite domination occupied forty years.² It is not necessary to suppose that Mesha's inscription is earlier than the events recorded in 2 K 3, for it is clear from that account that the campaign of the allied kings was unsuccessful. Moreover, an ancient king in recording his achievements was naturally silent about his reverses.

The independence which Moab recovered under Mesha was perhaps lost again in the reign of Jeroboam II. It is, however, impossible to speak with certainty on this point, for the south limit of Jeroboam's kingdom is given as 'the sea of the Arabah' (2 K 14²⁵), and may refer only to the north of the Dead Sea. For 'the sea of the Arabah' Amos (6¹⁴) speaks of 'the brook of the Arabah,' which has been identified with 'the brook of the *Arābhīm*' or 'willows' (Is 15⁷), which by some has been identified with the Wādy el-Hāsy. These identifications are, however, by no means certain, and the order of names in the preceding verses of Is 15 suggests that 'the brook of the willows' is to be sought in the north of Moab. Amos (2⁸) mentions a judge of Moab in lieu of a king, and it has accordingly been argued that at the time Moab possessed no king of its own; but this cannot be decided with certainty.

During the Assyrian period Moab appears to have shown more prudence than the Israelite kingdom in bowing to the storm. Tiglath Pileser exacted tribute, and, although in 711 B.C. Sargon mentions Moab in conjunction with Philistia, Judah, and Edom as having formed an alliance with Egypt, Moab probably avoided an invasion by a timely submission. It continued subject to Sennacherib, Esar-haddon, and Assurbanipal, and, according to 2 K 24², furnished troops to Nebuchadnezzar against Jerusalem. Doubtless in Moab as in Judah there was throughout a party bent on regaining the national independence, and at the beginning of the reign of Zedekiah of Judah (Jer 27) this party appears to have been in power. Yet no actual revolt from Nebuchadnezzar seems to have taken place, and Moab afforded an asylum to fugitive Jews (Jer 40¹¹). It is not improbable that after the destruction of Jerusalem the policy

¹ The summary of Saul's wars (1 S 14⁷) bears such a strong resemblance to that of David's (2 S 8) that it may be doubted whether there was any definite tradition of a campaign of Saul against Moab. Hostilities between Saul and Moab would not indeed be inconsistent with 1 S 22³⁶, and David, when he succeeded to the throne, would at once stand in a different relation to the king of Moab from that which he had occupied as a rebel against Saul.

² A discussion of the way in which this statement is to be harmonized with the Biblical chronology lies outside the scope of this article. It is to be noted that, although by 'the son of Omri' Mesha probably means Ahab, the expression would not preclude a later successor (see W. H. Bennett, *The Moabite Stone*, pp. 20-22).

of Moab coincided with that of the king of Ammon, who apparently intended by the murder of Gedaliah to compel Judah to join a confederacy against the Chaldeans.

Moab was menaced, however, by a danger even more formidable than that from Assyria or Babylonia: east and south the country was exposed to invaders from the desert, and Ezekiel (25³⁴) already perceived the coming disaster. The criticism of Jeremiah (48), which describes the devastation of Moab, is extremely difficult; the chapter, however, appears to be to a great extent a cento of various earlier passages, and this in itself implies a late date. Is 15-16¹², which is used by the author of Jer 48, notwithstanding the corrupt condition of the text and later modifications, gives a clearer picture of Moab's disaster. Here it is evident, if we argue from the names of places which may be identified with tolerable certainty, that the invader advances from south or south-east to north or north-west, and therefore cannot be the Assyrian, Chaldean, or Persian, but must be a foe from the desert.¹ With this invasion the national existence of Moab came to an end, though Jewish writers long continued to mention the country by the old name (Is 25¹⁰, Ps 60⁸ 83¹⁰⁸). It is remarkable that the name Moab does not occur in 1 Maccabees. It is found, however, in Dn 11⁴, and Josephus (*Ant.* i. xi. 5, XIII. xiii. 5, xv. 4) uses the term 'Moabites' to denote the Nabatean Arabs.

The language of Moab, as we know from Mesha's inscription, was Hebrew, differing only dialectically from the language of the O.T. It is, indeed, not impossible that what we regard as peculiarities of Moabite speech once belonged also to the spoken Hebrew of W. Palestine. Although portions of the O.T. are earlier than the 9th cent. B.C., they were probably long preserved in an oral form, in which case peculiarities of dialect may well have been modified.

The land of Moab affords many proofs even in these days of its former fertility and prosperity. The O.T. has several references to the cities of Moab, many of which are named, and mentions its vineyards as well as its sheep. Being situated off the direct line of communication between Egypt and the great Asiatic empires, it was less liable than W. Palestine to be made a battlefield, though doubtless there was constant need of warding off the attacks of dwellers in the wilderness. On the whole, however, Moab seems to have had a far more peaceful history than Israel. In the words of Jer 48¹¹, 'Moab had been at ease from his youth, and had settled on his lees, and had not been emptied from vessel to vessel, neither had he gone into captivity.'

The religion of Moab presents many parallels to the popular religion of Israel in pre-Exilic times. There is no evidence, however, that any great Moabite prophets, if such existed, could point, as did the Israelite prophets, to a tradition of purer religion in the past. Like Israel, Moab had taken possession of a land containing stone circles (in O.T. language, *gulgāls*) and other primitive monuments, and it is probable that in the land of Moab, as in W. Palestine, some of these were adapted to the worship of the later strata of population. From the occurrence of such names as Baal-Meon and Baal-Peor it may be inferred that the pre-Moabite religion of the land resembled the pre-Israelite religion of W. Palestine, and was in fact Canaanite. This inference is confirmed by the occurrence of the curious compound 'Ashtar-Chemosh' (Moabite Stone, line 17); for Ashtar is probably a masculine form of the name familiar to us as Ashtoreth, and

the combination of it with Chemosh suggests that some ancient sanctuary of Ashtar or Ashtoreth had been appropriated by Chemosh, just as the ancient sanctuaries of Canaan in W. Palestine came to be considered sanctuaries of Jahweh. We know both from the O.T. and from the Moabite Stone that Chemosh was the national god of Moab exactly as Jahweh was the national God of Israel. Indeed, the Moabite conception of Chemosh appears to have coincided with the ordinary Israelite conception of Jahweh. The name Chemosh appears compounded in proper names precisely as the name Jahweh. Thus Mesha's father's name was Chemosh in combination with some word which has been variously read as *melekh* and *gad*; a Chemosh-nadab (cf. the Israelite name Jonadab) paid tribute to Sennacherib; and the name Chemosh-yahi (cf. the Israelite Jehiah) is inscribed on a gem found near Beirūt (*EBi*, art. 'Chemosh'). Mesha speaks of Chemosh in precisely the same terms as an Israelite of his day might have used in speaking of Jahweh, and in Nu 21⁴⁹ the Moabites are called 'the people of Chemosh' and also his 'sons' and 'daughters.' Evidence of the existence of other cults in pre-Moabite times may be found in the occurrence of such a name as Nebo, but there is no reason for supposing that such worship continued among the Moabites. The name Dawdah, or Dawdoh, occurs on the Moabite Stone (line 12) apparently as a divine name; but, since Aiaroth, where the altar-hearth of Dawdoh was seized, was Gadite, the name throws no light on Moabite religion. Whatever the worship of Chemosh may have been before the permanent settlement of Moab, it is extremely probable that it was thenceforth largely intermingled with Canaanite elements. The O.T. makes it abundantly clear that the worship of Jahweh was tainted in precisely the same way, and Nu 25 affords no evidence that Moab was worse than Israel in this respect; only, whereas, by the 6th cent. B.C., Israelite religion had to a considerable extent been purged of the grosser Canaanite elements, that of Moab remained unreformed. Besides religious prostitution, indications of the prevalence of drunkenness in Moab have been found in Gn 19³², Jer 48²⁶; and, having regard to the references to vine-culture, this is not improbable, though the Israelites were scarcely in a position to throw stones. It is related (2 K 3²⁷) that Mesha, when hard pressed by Israel, sacrificed his son, and we may therefore assume that human sacrifice was a definite feature of Moabite religion. Human sacrifice, not only of the infant first-born, but on occasion of other victims also, was common in Israel down to the 7th cent. B.C. Mesha's sacrifice of his son should probably be compared, not with 2 K 16³, Mic 6⁷, for in the case of Ahaz probably only the ordinary offering of the infant first-born is meant, but rather with Jg 11³⁶. Cf. also Gn 22, 2 S 21⁹, 1 K 16³⁴. Further evidence of the general agreement of Moabite religion with that of Israel is to be found in Mesha's boast (Moabite Stone, line 17) that he has banned or made tabu the population of Nebo.

The danger to Israel of intimate intercourse with a people closely akin in race, speaking the same language, and holding religious ideas similar to those of which the prophets had so earnestly laboured to rid Israel, was clearly perceived by the Israelite reformers, and will partly account for the stringent law in Dt 23³, though political considerations may also have dictated this.

MODERATION. — Cicero in an interesting passage expresses some hesitation as to the proper Lat. equivalent of the Gr. word *σώφρων*:

'Veri etiam simile illud est, qui sit temperans, quem Graeci *σώφρονα* appellant, eamque virtutem *σωφροσύνην* vocant, quam soleo equidem tum temperantiam, tum moderationem appellare, nonnunquam etiam modestiam; sed haud scio an recte ea virtus frugalitas appellari possit' (*Tusc. Quaest.* iii. 8).¹

He proceeds to describe the virtue in question as follows:

'Eius videtur proprium, motus animi appetentis regere et sedare, semperque adversantem libidini, moderatam in omni re servare constantiam.'

Moderation, according to this view, is a part of temperance. If temperance consists in self-control in regard to the pleasures of sense, moderation is self-control exercised in less difficult spheres. Limitation (*modus, moderatio*) is, of course, a feature in all virtue; this idea has a long history in the philosophy of Greece, and takes formal shape in Aristotle's doctrine of 'the mean' which gives expression to the peculiarly Greek notion that virtue in its essence means 'harmony, grace, and beauty in action' (see A. Grant, *The Ethics of Aristotle*², London, 1866, vol. i. essay iv.).² The word 'moderation,' however, is in Christian ethics specially assigned to the virtue which 'in least things sets the limit.' If temperance is concerned with strong passions, moderation controls those which are less vehement. Such, at any rate, is the view of Aquinas in his discussion of *modestia* (*Summa*, ii. ii. 160).

Following the guidance of Aquinas, we find that 'moderation' is chiefly concerned with four matters: (1) the desire of excellence or superiority; (2) the desire of knowledge; (3) the outward actions concerned with the conduct of life, business, and recreation, work and rest, etc.; (4) apparel, furniture, and the external apparatus of life.

Each of these points is fully discussed by Aquinas in ii. ii. 161-169.

(1) As regards the desire of superiority, the virtue which moderates it and regulates it is humility (*q.v.*).

(2) The virtuous control of the desire of knowledge is called by Aquinas *studiositas* as opposed to a form of excess which he calls *curiositas* (cf. *Aug. Conf.* x. xxxv. 54). Little needs to be added to the discussion in the *Summa* (ii. ii. 166, 167). We may, however, call attention to a fine passage in Bernard (*in Cant.* xxxvi. 3), who points out that in 1 Co 8² St. Paul 'non probat multa scientem, si sciendi modum nescierit.' Christian moderation, he says in effect, will prescribe the limitations under which knowledge should be pursued, in respect of the choice of subjects, the degree of zeal, and the purpose of the student. He lays great stress on the question of motive. Those who wish to know merely for the sake of knowing give way to 'turpis curiositas.'³ Those who pursue knowledge 'ut aedificent' are guided by charity; those who seek it 'ut aedificentur,' by prudence (cf. T. Wilson, 'Maxims of Piety and Morality,' no. 429 [*Works*, Oxford, 1847-63, v. 423]).

(3) Moderation in the matter of work and recreation and other corporal actions and movements is discussed in *Summa*, ii. ii. 168. What Aquinas says practically amounts to this—that man's external behaviour is to be consistent with his dignity as a reasonable being and with the claims made upon him as a member of a community. What St. Paul means to imply in the words *σεμνός* and *κόσμιος* is here in point (1 Ti 32⁴).

¹ Cf. *Orat. pro Deiot.* ix. 28: 'Ego frugalitatem, id est, modestiam et temperantiam, virtutem esse maximam iudico' (quoted by Aug. *de Beata Vita*, 31). Ambrose, in *de Off. Min.* i. 48, treats moderation and temperance as synonymous.

² Cf. Aug. *de Nat. Bon.* 3; Aquinas, *Summa*, ii. ii. 141. 7.

³ Cf. Seneca, *Ep.* lxxxviii. 36: 'Plus scire quam sit satis, intemperantiae genus est.'

as to which Trench (*Synonyms of the NT*, Cambridge, 1854, § xcii.) draws the following distinction:

'Whatever there may be implied in *κόσμιος*,¹ . . . something more is involved in *σεμνός*. If the *κόσμιος* orders himself well in that earthly *πολιτεία*, of which he is a support and an ornament, the *σεμνός* has a grace and dignity not lent him from earth; but which he owes to that higher citizenship which is also his,' etc.

Aquinas deals at length with the question of recreation, but says little as to the duty of moderation in work. This point is one which has its importance for us owing to the conditions of modern industrial life. It has been said of the Anglo-Saxon race that 'an excess of industry,' 'intemperate labour,' is one of its most prominent characteristics (A. Wylie, *Labour, Leisure, and Luxury*, new ed., London, 1887, p. 19). Christian moderation implies such self-restraint in the matter of labour as will give fair play to the faculties, spiritual and mental, which are not absorbed in the business of life (on this point W. Law writes suggestively in his *Serious Call*², London, 1772, ch. iv.). On the other hand, pleasure-worship is a more obvious peril of our time. In every class there are multitudes who are 'lovers of pleasures more than lovers of God' (2 Ti 3⁴), and the result is seen in a wide-spread enfeeblement of will and conscience. Recreation is, of course, a duty which we owe to our nature—a duty distinctly implied in the Fourth Commandment, and there is a virtue concerned with the due regulation of the natural desire for relief from labour.

'Ludendi etiam est quidam modus retinendus' (Cic. *de Off.* i. 29; cf. 34).

We can scarcely on this point improve upon the maxim of Aristotle that in determining the right mean in such matters tact alone (*ἐπιδεξιότης*) can decide, i.e. a sense of fitness trained by exercise and reflexion.² Aquinas points out that, as there can be sinful excess in the matter of amusement, so there may be a wrong defect, for a man in social intercourse must 'show himself friendly' (Pr 18²⁴).

'It is contrary to reason for a man to make himself irksome to others, taking no pains to please them and even hindering their pleasures' (*Summa*, ii. ii. 168. 4 resp.).

Still, since amusement is to be sought with a view to labour (Arist. *Eth. Nic.* x. 6. 6: *καί τινος σκοπούδ' ἔστι*), happiness does not consist in amusement, and to make a serious business of it is 'foolish and very childish' (*ib.*). Christian tact in these matters was what the Puritans of the 17th cent. lacked. They were credited with the opinion that 'no honest mirth or recreation is lawful or tolerable in our religion' (see the *Declaration* of Charles I. of 18th Oct. 1633, which may be found in H. Gee and W. J. Hardy, *Documents illustrative of Eng. Church Hist.*, London, 1896, p. 528 ff.). The Puritan, says J. R. Green, lacked 'all sense of measure and proportion in common matters.'³ John Bunyan's sin which 'he could not let go' was 'a love of hockey and of dancing on the village green.' It was in the midst of 'a game of cat' that the converting voice 'did suddenly dart' into his soul (Green, v. 103 f.).

(4) The virtue of moderation finally finds scope in the *minutiae* of external apparel, furniture, and other conveniences of life (cf. Cic. *de Off.* i. 39: 'eadem mediocritas ad omnem usum cultumque vitae transferenda est'; see also i. 35, and cf. Basil, *Hom. de Humilitate*, vii., and Ambrose, *de*

¹ Theodoret (on 1 Ti 3²) remarks that the word *κόσμιος* implies good behaviour in voice, appearance, and gait, *ὥστε καὶ διὰ τοῦ σώματος φαίνεσθαι τὴν τῆς ψυχῆς σωφροσύνην*.

² The virtue concerned with recreation, according to Aristotle, is *εὐπαιδεία*, for which *urbanitas* or *comitas* might be a fair Latin equivalent. As to the peculiarly Greek grace of *εὐπαιδεία* see *Eth. Nic.* iv. 8; cf. Thuc. i. 38, 41.

³ *Hist. of the English People*, London, 1895-96, v. 102; cf. Ambrose, *de Off. Min.* i. 16 [78], who derives *modestia* 'a modestiae quid deceret.'

Off. Min. i. 18). We may note that the word *κόσμος* is applied to the dress of women (1 Ti 2⁹), and a similar expression, *ἐν καταστάσει λεπτοπρεπείας*, is found in Tit 2³. The principle implied seems to be that a person's dress is to be proportioned to his station or office in life, or to the occupation in which he may chance to be engaged (work, or recreation, or worship).¹ Law goes to the root of the matter when he represents 'Paternus' as advising his son on these points:

'Let your dress be sober, clean, and modest, not to set out the beauty of your person, but to declare the sobriety of your mind, that your outward garb may resemble the inward plainness and simplicity of your heart. For it is highly reasonable, that you should be *one man*, all of a piece, and appear outwardly such as you are inwardly' (*Serious Call*, ch. xviii.).² As to the dress of women see what is said of 'Miranda' (ch. ix.).

It may be objected that this entire account of 'moderation' is somewhat arbitrary. The fact is that moralists have evidently found difficulty in distinguishing between the different spheres of action in behaviour which are regulated by moderation, sobriety, and temperance respectively. There is, however, practical convenience in following the line suggested by Aquinas. He may be criticized as over-systematic, but we need not suppose that his classification is intended to be exhaustive. The virtue which 'in minimis modum ponit' will be differently estimated according to the various circumstances in which men find themselves placed:

'Quaerendum etiam in omni actu quid personis, quid temporibus conveniat atque aestatibus, quid etiam singulorum ingenis sit accommodum. Saepe enim quod alterum decet, alterum non decet' (Ambrose, *de Off. Min.* i. 48 [212], speaking of moderation).

It remains to add that the word 'moderation' occurs in AV only in Ph 4⁸ (*τὸ ἐννεύκτες*). In RV the word is translated 'forbearance.' The grace which St. Paul has in mind—'considerateness' or 'reasonableness'—is, of course, a form of that beautiful 'moderation' which Wilson describes in 'Sacra Privata' (ed. Oxford, 1849, p. 41 [*Works*, v. 31]) as 'the way of an happy life':

'Lay nothing too much to heart; desire nothing too eagerly; rejoice not excessively; nor grieve too much for disasters; be not violently bent on any design; nor let any worldly cares hinder you from taking care of your soul; and remember, that it is necessary to be a Christian (that is, to govern one's self by motives of Christianity) in the most common actions of civil life.' This is essentially the spirit enjoined by St. Paul (1 Co 7²⁹⁻³¹). Cf. Ambrose, *de Off. Min.* i. 18 [70]:

'Magna igitur modestia, quae cum sit etiam sui juris remissior, nihil sibi usurpans, nihil vindicans, et quodammodo intra vires suas contractior, dives est apud Deum.'

MODERATISM.—See EVANGELICALISM.

MODERNISM.—Modernism is the name given by the papal encyclical which condemned it to a complex of movements within the Roman Communion, all alike inspired by a desire to bring the tradition of Christian belief and practice into closer relation with the intellectual habits and social aspirations of our own time. These movements arose spontaneously and, for the most part, in entire independence of one another during the last decade of the 19th century. Since they had thus a common inspiration and a common purpose, it was neither unnatural nor unfair that the authority which condemned them should unite them under a common designation in a common censure. Yet

¹ In classical writers sentiments of this kind occasionally occur: e.g. Hor. *Carm.* i. v. 5; Ter. *Heaut.* ii. iii. 47; Cic. *de Off.* i. 36: 'a forma removeatur omnis viro non dignus ornatus; et huc simile vitium in gestu motuque caveatur.'

² We are reminded of the advice of Polonius to Laertes in *Hamlet*, act i. sc. 3. Ambrose says strikingly (*de Off. Min.* i. 18 [71]): 'Vox quaedam est animi, corporis motus.'

it is necessary to insist that, in the earlier stages of their development, the various movements grouped together and logically correlated by the author of the encyclical *Pascendi* had little or no conscious connexion, and that it was only the external pressure of adversity that gradually forced them at a later period into mutual relations of a more intimate kind.

It may be well in the first place to sketch briefly the history of this complex movement as a whole, and then to give some account of the various forms which it has assumed. These may perhaps be treated most conveniently under the heads of (a) apologetic, (b) historical criticism, and (c) ecclesiastical and social reform.

1. History.—It must not be forgotten that the Vatican Decrees were the result of a liberal movement in the Church. For its founders, or at any rate for most of them, Ultramontanism was the vision of a Roman Catholicism freed from the entanglements of ancient dynastic contentions and in its new independence pledged to the spiritual leadership of the rising democracies. It was natural that the movement should find its fruitful seed-bed in the countries which had yielded most readily to the spell of the Revolution. Lamennais, Lacordaire, and Montalembert were its chief names in France; in Italy, Gioberti and Rosmini. But the hopes of the earlier Ultramontanism, open to all the winds of the century, perished in 1848. The consolidation of the spiritual empire of the papacy was to be achieved by other instruments and in another spirit. The Council of the Vatican seemed, both to the victors and to the vanquished, to be the definite reproof of the generous dreams which had made it possible. Its reactionary character was accentuated by contemporary happenings—the consolidation of the Italian kingdom at the expense of the temporal power, and the establishment of the Third Republic in France. Yet, in fact, a new era had dawned. Both in the intellectual and in the political spheres new and strange problems urgently demanded the attention of Roman Catholic scholars and thinkers. Many among them felt that the Church was in danger of being paralyzed by the Syllabus and the Vatican decrees, and were resolved that this danger must at all costs be averted. The accession of Leo XIII. in 1878 seemed to give them their opportunity. His numerous encyclicals, while conservative and traditional in tone and perhaps still more so in intention, were nevertheless so framed as to be capable of being turned to account by the progressives. Of these encyclicals, three may be specially recalled: *Aeterni Patris* (4th Aug. 1879), which enjoined a return to the traditional metaphysics of St. Thomas Aquinas as the necessary foundation for the demonstration of the chief points of Christian belief; *Rerum Novarum* (15th May 1891), which dealt with the condition of the working classes; and *Providentissimus Deus* (18th Nov. 1893), which expressly condemned 'disquieting tendencies' in Biblical interpretation 'which, if they prevailed, could not fail to destroy the inspired and supernatural character of the Bible.' The warnings and counsels contained in these documents were resumed and reinforced in a further encyclical, dated 8th September 1899, and addressed to the archbishops, bishops, and clergy of France. It may be said that the whole history of Leo XIII.'s pontificate, its success and its failure, is to be found in a comparison of the last of these documents with its three predecessors. Such a comparison reveals a growing alarm on the part of authority at the development both of those new tendencies in apologetic or exegesis which it had attempted to repress and of the social action of the clergy which it had encouraged.

That alarm was not without justification. It is in France, intellectually and politically the most highly developed country of the Roman Communion, that the reason for it can be most clearly traced. In 1875 the French episcopate secured from the government of the Third Republic the right to establish what were practically Roman Catholic universities free from all State control. Of the foundations thus authorized the most important was the Catholic Institute of Paris, which came into existence in 1878. Among its first professors was Louis Duchesne, a scholar who, though then only thirty-five years of age, had already achieved considerable reputation as an ecclesiastical historian of wide knowledge and independent judgment. Three years afterwards one of Duchesne's pupils, Alfred Loisy, a young priest belonging to the diocese of Châlons, was appointed to the chair of Hebrew at the Institute. Both scholars claimed the right to apply a rigorously scientific method to their respective spheres of research, the one to ecclesiastical history, the other to Biblical exegesis. Their contention was that it was not only possible, but necessary, to distinguish between the requirements of history and of faith. Duchesne's critical boldness in the treatment of ecclesiastical legend speedily aroused the hostility of the traditionalists, and in 1885 he was compelled to suspend for a year his course at the Institute. It was not till 1893 that Loisy was forced to resign his chair—a resignation which was followed by the condemnation, in the encyclical *Providentissimus*, of the principles of Biblical interpretation which he had upheld. During the decade of his connexion with the Institute, however, a group of scholars had been formed who, having become teachers in their turn, carried an enthusiasm for the critical method into the other Catholic Institutes and many of the diocesan seminaries.

The new movement towards a positive theology, as it was called, had its effect also upon the lay world. The beginning of the nineties was marked in intellectual France by what Brunetière described as 'the bankruptcy of science.' This meant that science had proved unequal to the needs of life, that man could not live by science alone, and that religion was coming into its own again. But, if it meant a revolt against scientific dogmatism, it meant equally a revolt against philosophic dogmatism. New tendencies in philosophy were beginning to appear which assigned to the will or to the total activity of the human spirit the principal rôle in determining truth. A young Roman Catholic philosopher, Maurice Blondel, turned these new tendencies to account in the interests of Christian apologetic in a thesis entitled *L'Action*, sustained before the Sorbonne for his doctor's degree on 7th June 1893. A year or two earlier, a group of young members of the university, attracted by the new spirit among the teaching clergy and prepared to find in it a promise of reconciliation between religion and contemporary knowledge and ways of thought, had founded a society which was to embrace those who desired to retain or regain religious belief without sacrifice of intellectual honesty. The society (its title, *L'Union pour l'action morale*, sufficiently indicated its object) had among its members religious free-thinkers, Roman Catholics, Protestants, and Jews. On the occasion of a congress of Roman Catholic youth, held at Grenoble in May 1892, Leo XIII. had written a letter to the bishop of Grenoble in which he declared that it was the part of Christian wisdom to promote the co-operation of all men of goodwill, whether believers or those who, while not believers, were yet *naturaliter Christiani*, in the pursuit of individual and social good. This declaration was received with enthusiasm by the

members of the new Union, and its president, Paul Desjardins, sought an interview with the pope and obtained from him the assurance of his entire sympathy with its aims. Meanwhile many of the younger clergy had found in the encyclical *Rerum Novarum* and in Leo XIII.'s advice to French Roman Catholics to rally to the Republic the long-awaited opportunity of religious action upon the democracy. Numerous Roman Catholic democratic journals were started, the democratic clergy were invited by many bishops to explain their views to the students of the diocesan seminaries, and public conferences were organized at which men of all shades of democratic opinion were welcomed.

Thus throughout the French Church a new era of intellectual and social activity seemed suddenly to have dawned under the immediate sanction of authority. Leo XIII.'s later pronouncement, it is true, aimed at keeping in check the various phases of the complex movement which his earlier encyclicals had been interpreted as in some degree encouraging. Yet up to the end of his pontificate no individual condemnation had taken place, and that though it was believed that determined efforts had been made to procure the condemnation of Loisy's first attempt to utilize the results of his critical studies for popular apologetic purposes in his little book *L'Évangile et l'Église*. This book, published towards the end of 1902, was afterwards described by its author as '(1) a historical sketch and explanatory account of the development of Christianity, and (2) a general philosophy of religion and an essay in the interpretation of dogmatic formulas, official Symbols, and conciliar definitions, with a view to bringing them into agreement, by the sacrifice of the letter to the spirit, with the data of history and contemporary ways of thinking' (*RHLR* xi. [1906] 570). It precipitated a ferment which had been slowly and silently working throughout the Roman Church during twenty years. In Italy, Germany, England, America, and even in Spain, Loisy was suddenly hailed as an interpreter of ideas which had long been more or less clearly present to many minds. His treatment of religion on its side of human growth had welded together the philosophical and the more strictly theological elements of the new apologetic method. His treatment of the nature of ecclesiastical authority in the *Autour d'un petit livre* (a sequel to *L'Évangile et l'Église*) served to demonstrate to the social reformers within the Church a close kinship between their own aims and methods and those of the theological reformers. Loisy had all unconsciously become the nucleating centre of a movement which knit together all the various elements of reform and extended its ramifications throughout large sections of the Roman Catholic world.

The election of Pius X. to the papal chair was an opportunity for stern dealing with this new threat to the fixity of Roman Catholic tradition. For some years before the death of his predecessor the peril of the new doctrines had been vehemently proclaimed by the traditional theologians, notably by C. F. Turinaz, the bishop of Nancy, and J. Fontaine of the Society of Jesus. Leo XIII. had probably nosympathy whatever with the attempted reconciliation between the Church and modern life, but he had himself aimed at some reconciliation, and he therefore shrank from direct condemnation. Pius X. had no such difficulty. Reconciliation implied that tradition was perfectible, which he could not admit. He hastened, within a few months of his election, to strike at both the theological and the social activities of the reformers. On 16th December 1903 five of Loisy's books were placed on the Index, and two days afterwards a *motu proprio* was issued which aimed at regulating

'popular Christian action.' The war, which was to be waged during the next four years, had been declared. A varied and continued literary activity, on the one side, was met by repeated condemnations, on the other. Loisy indeed made a formal submission, and devoted himself in silence to the preparation of his great work on the Synoptic Gospels. But Blondel's 'philosophy of action' was popularized by Lucien Laberthonnière, a priest of the Oratory, in a series of articles published for the most part in the *Annales de philosophie chrétienne*, and afterwards issued in two small volumes—*Essais de philosophie religieuse* and *Le Réalisme chrétien et l'idéalisme grec*. In the *Quinzaine*, a review edited by Georges Fonsegrive, a professor of the university, another university professor, Edouard Le Roy, inaugurated a discussion of the nature of religious dogma which provoked a considerable controversy. Le Roy afterwards published, in the form of a volume entitled *Dogme et critique*, a collection of replies to his critics, together with the original articles. In Italy Antonio Fogazzaro, the novelist, launched a programme of ecclesiastical reform, having for its object a general renewal of Christian life, in his novel *Il Santo* (Milan, 1906). In the same country Giovanni Semeria, a Barnabite, did much by his lectures on both the historical and the philosophical aspects of apologetics to disseminate the new ideas, while Romolo Murri, a secular priest of the diocese of Fermo, continued his crusade on behalf of Christian democratic action, undismayed by numerous manifestations of hostility on the part of authority. Among his chief supporters in this crusade was Salvatore Minocchi, a professor of Hebrew at Florence, who had also become known as a Biblical critic through his studies of the Psalms and of Isaiah. In England the movement was represented principally by the writings of George Tyrrell, a member of the Society of Jesus, and Friedrich von Hügel. The latter had read a paper on the progress of OT criticism as it concerned the Hexateuch at a Roman Catholic Congress held at Fribourg-in-Switzerland in 1897, which afforded ample evidence of his accurate scholarship and of the freedom of his critical method and conclusions. Since then he had been engaged on an important work on *The Mystical Element of Religion* (it was not published till 1908), which revealed his originality and depth as a thinker on all the problems connected with religion, while it gave further proof of his competence as a critical historian. Meanwhile he had contributed articles to the *Quinzaine*, *Il Rinascimento*, and other Modernist reviews, notably a reply to an article by Blondel which had impugned the right of criticism to a complete autonomy in the religious domain, and a defence of critical conclusions with regard to the Pentateuch against a judgment of the papal Biblical Commission affirming its Mosaic authorship (27th June 1906). Tyrrell was already widely known for his frank and bold handling of religious difficulties, but it was his acknowledgment of the authorship of *A Letter to a University Professor*, which had been privately circulated, and his consequent expulsion from the Society of Jesus (Feb. 1906), that brought him to the forefront of the Modernist movement and made him its universally acknowledged leader till his death in July 1909. In Germany the movement was for the most part confined to an agitation for ecclesiastical reform. Franz Xavier Kraus, a professor at Freiburg-im-Breisgau, was the determined opponent of Ultramontanism. An Ultramontane he defined as 'one who places the Church before religion, who identifies the pope with the Church, who is ready to sacrifice a clear decision of his own conscience to the sentence of an external authority'

('Kirchenpolitische Briefe,' ii., in *Allgemeine Zeitung*, Supplement, 1895, no. 211; the letters were signed 'Spektator,' one of the pseudonyms adopted by Kraus; see Schnitzer, *Der katholische Modernismus*, in the series *Die Klassiker der Religion*, p. 39, where the letter is given in full as the work of Kraus). Kraus, however, died in 1902, too early to be involved in the distinctively Modernist controversies. Hermann Schell, a professor in the Theological Faculty at Würzburg, had as early as 1896 published a book entitled *Katholizismus als Prinzip des Fortschritts*, which provoked long and bitter controversy. As a result certain bishops of Northern Germany forbade their priests to attend his lectures. Two years afterwards controversy was renewed over Schell's views on eternal punishment, and four of his books were placed on the Index. Schell made a formal submission after receiving an assurance from the bishop and the Theological Faculty of Würzburg that such submission did not imply any sacrifice of conviction on his part. But he withdrew none of the condemned books from circulation, and continued till his death in 1906 to be the leader of a strong liberal movement in German Roman Catholicism. Among his most influential disciples were Albert Ehrhard of Strassburg, Joseph Schnitzer of Munich, and Hugo Koch of Braunsberg.

Pius X. did not fail to reply to the growing menace of this movement. During the years 1905-06 he issued a series of encyclicals in condemnation of the Christian Democratic movement in Italy. Another series of decisions by the Biblical Commission which Leo XIII. had appointed in 1902 reproved the audacities of criticism in questioning accepted beliefs as to the authorship and authenticity of certain books of Scripture. In April 1906 the works of Laberthonnière and Fogazzaro's *Il Santo* were condemned by the Congregation of the Index. But it was not till the beginning of 1907 that the storm burst in its full fury. Murri was suspended 'a divinis' on 15th April. Two days later the pope delivered an allocution in which he denounced the new movement as 'the compendium and poisonous essence of all heresies,' and called upon the cardinals to aid him in eradicating these evils from the Church. At the end of the same month the Cardinal Prefect of the Index wrote to Cardinal Ferrari, archbishop of Milan, enjoining him to procure the suppression of *Il Rinascimento*, a Modernist review which had been launched at the beginning of the year. The Cardinal Prefect's letter was remarkable not only for the strong terms in which it denounced the review as 'notoriously opposed to Catholic spirit and teaching,' but also because it took the unusual course of expressly naming certain writers—Fogazzaro, Tyrrell, von Hügel, and Murri. In May the archbishop of Paris, inspired, no doubt, by similar action on the part of the Cardinal Vicar, prohibited the reading of Le Roy's *Dogme et critique*, and at the same time forbade any priest in his diocese to collaborate in Loisy's *Revue d'histoire et de littérature religieuses*. The professors of the Catholic Institute of Paris were at the same time forbidden by the bishops who controlled that seat of learning to contribute to *Demain*, a small Modernist weekly which had been founded at Lyons in 1905. In June Pius X., in a letter of felicitation to Ernst Commer, a professor at Vienna, who had written an attack upon the theology of Hermann Schell, described those who had projected a monument to Schell's memory as 'either ignorant of Catholicism or rebels against the authority of the Holy See,' though among them were the archbishop of Bamberg and the bishop of Passau.

By this long series of censures the way was

prepared for a more stringent and inclusive condemnation of all the various heresies, exegetic, apologetic, philosophical, and social, that were troubling the Roman Catholic world. That condemnation was pronounced in the decree of the Inquisition, *Lamentabili sane exitu*, dated 3rd July 1907, and the encyclical *Pascendi Dominici gregis*, of 8th September in the same year. The decree *Lamentabili* was a mere collection of sixty-five propositions which were to be condemned. No indication was given of the sources from which they had been derived, and no writer was condemned by name, but thirty-eight of the propositions were directly concerned with Biblical criticism, and Loisy, in some notes on the decree which he published at the beginning of the following year, accepted its condemnation as directed in large measure against himself. The encyclical *Pascendi* was a document of much greater importance, and was recognized as such by the leading Modernists. Tyrrell met it with vigorous criticism and open defiance in two articles which appeared in the *Times* on 30th September and 1st October, in the full knowledge that he was exposing himself to the severest censures of the Church. On 28th October a more detailed reply was published in Rome under the title *Il Programma dei modernisti*. The encyclical had deduced from an unsound philosophical principle all the various errors which it grouped together under the name of Modernism, and it maintained that the false conclusions of the Modernists with regard to history, dogma, and the Bible were all the necessary result of an erroneous philosophy. To this the *Programma* replied that it was, on the contrary, the undeniable results of historical criticism that had made necessary a new apologetic of some kind.

The attitude of Tyrrell and of the authors of the *Programma* revealed a determination to resist the action of authority. The watchword of this resistance was to be 'No schism.' Even if excommunicated, the Modernist leaders were resolved to claim their inalienable right of spiritual domicile within the Church. Authority might cut them off from its outward communion, but could not affect their inward communion with it. Tyrrell expounded the new policy in an article contributed to the *Grande Revue*, and remained till his death its most consistent adherent. But the difficulty of giving effect to the policy soon became apparent. The chief difficulty lay in the economic dependence of the Modernist clergy, which prevented their action in the open. On the morrow of the publication of the *Programma*, e.g., the reading of the book was forbidden to the faithful and its authors were excommunicated. But, as they still remained anonymous, the effect of their protest upon the outer world was largely discounted. Yet it was in Italy that resistance to the encyclical was most obstinate and prolonged. In spite of the assiduous suppression of Modernist journals, both scientific and social, new ones continually appeared in that country. Among these the most influential was *Nova et Vetera*, founded in January 1908, in which for the first time theological views of a decidedly negative character, such as found expression in the *Lettere di un prete modernista*, published at Rome in the same year, began to appear. Meanwhile condemnations were launched against the leaders who had appeared in the open. Loisy was formally excommunicated on 7th March 1908. The same sentence was pronounced against Murri, who had been elected as a deputy to the Italian Chamber, on 22nd March 1909. Tyrrell had been deprived of the sacraments on 22nd October 1907. The same fate befell Schnitzer at the beginning of February 1908. Minocchi was suspended 'a divinis' in January of the same year, and in the

following October voluntarily withdrew into secular life. This series of personal condemnations was followed up and completed by a blow aimed at the Christian Social movement in France. The *Sillon*, the organ of the movement, was formally condemned on 25th August 1910, and its promoters ordered to work henceforward for social reform under the direction of their respective bishops. Marc Sangnier, the lay leader of the movement, made his submission, but Pierre Dabry, its most prominent clerical representative, withdrew into secular life.

The various measures of repression set forth in the encyclical *Pascendi* having failed, after a lengthened trial, to produce the desired effect, Pius X. issued, on 1st September 1910, the *motu proprio Sacrorum Antistitum*, in which he enjoined the imposition of a special oath of adhesion 'to all the condemnations, declarations, and prescriptions contained in the encyclical *Pascendi* and the decree *Lamentabili* upon all professors of seminaries and Roman Catholic universities and institutes on admission to their office and upon all ordinands. It fell, however, not to a priest or even to a layman, but to a woman, to make a protest against what she conceived to be a violation of Christian liberty. Maude Petre, the biographer of Tyrrell, having been called upon by the bishop of the diocese in which she resided to subscribe to the condemnations contained in the encyclical *Pascendi* and the decree *Lamentabili* as a condition of her admission to the sacraments, refused to do so on the ground that such subscription would imply a readiness to defend, if necessary with her life, every word of those documents as being equally important for faith with the Apostles' Creed itself. About the same time an anonymous document, purporting to represent the views of a numerous group of ecclesiastics belonging to all the French dioceses, appeared in a Parisian newspaper, the *Siecle*. It contained a declaration that its authors desired, before taking the oath under constraint, to protest before God and the Church that they did not regard their act of submission as in any way binding upon their consciences or as implying any modification of their opinions. Whether with this reservation or not, the anti-Modernist oath was generally taken by most of those suspected of being Modernists, and the history of Modernism as an open movement in the Roman Catholic Church had come to an end.

2. Forms.—(a) Apologetic of immanence.—It was the aim of the philosophic Modernists, notably of Laberthonniere, to establish the cardinal points of Christian belief by the aid of the modern evolutionary or dynamic view of the universe. That involved a departure from the traditional scholastic method of apologetic. But they did not abandon scholasticism arbitrarily, simply because it was old. On the contrary, it was their sincere belief that the Aristotelian metaphysic and logic utilized by the scholastic theologians provided a less perfect instrument for the illustration and defence of specifically Christian belief than the more modern conceptions of life. It is, e.g., an essential part of Christian belief that God is personal and that He is Creator. But it is only in the light of a dynamic conception of the universe that the full significance of these affirmations is disclosed. The God of Aristotle was a logical abstraction, the ultimate Idea. Creation was but the logical derivation of the divine Idea in specific forms towards a passively receptive matter. It was in no sense a productive effort realizing new life. But that is just what the Christian belief demands. For it God is the sovereign source of power, and that power goes forth, must by its very

nature go forth, in a real creative effort issuing in new life independent of and yet closely united with its source. And the very essence of that new life is again real creative action. For action is always creative, an extension of life beyond itself, its prolongation into another life, not itself, of which it remains the constitutive principle. Thus creation is God's transcendent reality introducing itself into the world and becoming immanent in it. And this act of creation is the act of the divine love by which God is eternally pledged to His world, by which His world, becoming self-conscious in man, needs and can receive His grace. Again, as Laberthonnière points out, it is just because God is not the 'pure act' of Aristotle, but the power which by His own nature acts continually, that we can conceive of a plurality, a society engendered within the unity of His own Being. The doctrine of the Trinity assumes a vital and not a merely formal character.

Thus the reality which we assign to life, because we already feel it there, is itself the motive of our belief in the personality of God. That personality is not a mere idea to which we attain by logical inference. It is a vital inference from our total experience of life as free creative action. That experience implies a more or less conscious communion of each separate creative unit with an original infinite source of creative life, and of all the units with one another in and through that life. All the terms which this essentially religious experience has formulated to express itself—communion, inspiration, revelation, faith, judgment—imply a concretely personal character in God. On the other hand, these terms, when interpreted to us and by us through the logical abstractions of the Aristotelian metaphysic, lose much of their distinctively religious significance. The conception of faith, *e.g.*, as an assent of the intelligence to the truth acquired extrinsically, by the teaching of a divinely deputed authority, fails to do justice to its concrete reality. That concrete reality of faith is an immediate response of the whole personal nature to the personal divine action upon it, a response in virtue of which it recognizes authority and the measure in which authority mediates the divine action to it. The intellectual element in faith exists, but it exists as a derivative from some profounder and more vital action of faith. So, again, revelation, when conceived as the final and imperfectible deposit of truth-statements to be imposed upon the intellect from without, is shorn of much of its religious character. Assent to such a revelation need not be religious at all. The real concrete revelation of God is to the whole personal nature apprehending His action upon it. And the perfect instruments of that revelation are Christ, the Incarnate Word, and the life of His Church in so far as it is a real extension of His life. The thought of the Church, its dogmas, its truth-statements, are but the partial and ever-perfectible translation in terms of one aspect of man's activity, his power of intellectually apprehending reality, of its living apprehension of God in Christ. Thus even the Gospels themselves are not a completed revelation. They indeed enshrine the perfect revelation of the Christ-life. But that revelation can be apprehended only in proportion as it is lived, and by those by whom it is lived. The Gospels were but the earliest attempt of those who had lived it to read and interpret its mysteries. Thus history is not of merely accidental importance to Christianity, but is, on the contrary, of its essence. As Laberthonnière frequently puts it, Christianity has dared to conceive of God *sub specie temporis*. God condescends to weave the texture of His vast designs with human hands. The divine inspiration of each individual life is

a free product of the total inspiration of past humanity and a contribution towards all future inspiration. So tradition acquires a vital, and not a merely formal, value.

(b) *Historical criticism*.—It was the aim of the philosophical Modernist to vindicate the Church as the supreme organ of the vital religious tradition of mankind. The historical Modernist sought to do the same thing in his own special field of study. The orthodox apologist, grounding himself on the closed character of revelation as imperfectible truth-statement, had to prove the practically formal identity of the dogmatic statements of the Church to-day with the Scriptural revelation. For the historian, however, the admission of such formal identity was impossible. The development of dogma from the most general to the most exact forms of statement, from the simplest to the most complex and detailed forms, was a fact of history. As a historian, the Modernist had merely to trace the development and expose its character. But, as a Christian apologist (the rôle which alone constituted him a Modernist), he had to undertake the much more difficult task of reconciling this development of dogma with its permanent truth-value. This he attempted to do by distinguishing between the spirit and the form of each dogmatic statement, ascribing to the former an absolute and permanent, to the latter a merely relative, instrumental, and mutable value. By the spirit of a dogma such apologists meant its witness to some aspect of religious experience which was necessary to the reality of the religious life, and therefore universal or capable of becoming universal. But that witness could pass current between mind and mind only by the aid of some intellectual symbol capable of suggesting the actually experienced reality. Such symbols, necessarily shaped by the intellectual methods and habits of their period of growth, were clearly perfectible. But the growth of dogma was something more, and more truly organic, than the adaptation, as it were consciously and from without, of more perfect thought-forms to a constant experience. For thought reacts upon life, the clear perception of an experience upon the experience itself, enlarging and deepening its import. And so many of the Modernist apologists were ready to find in the more developed forms of dogma a fuller expression of its spirit, the experienced reality actually deepened by the more adequate form of the witness to it. A similar method of treatment was applied by the Modernist historian to the growth of ecclesiastical government and institutions and all the formal aspects of the Church's life. As a historian, he had to deny the orthodox contention that the actual fabric of Church order had been instituted by Christ Himself. But he claimed that the Church as a society had grown out of the spirit of Christ, and that each stage in the evolution of its order could be shown to have been the necessary means, under the circumstances of its particular historical moment, of preserving or extending the operation of that spirit.

(c) *Ecclesiastical and social reform*.—Yet the movement did not propose simply to divinize the existing Church. Her actual institutions came into existence in a distant past in response to the needs of the spirit then operating within her. But to-day those institutions may be suffocating her true life. They may even, as Fogazzaro's saint suggests, be introducing false and destructive spirits into her system—'the spirit of falsehood, the spirit of clerical domination, the spirit of avarice, the spirit of immobility' (*Il Santo*, pp. 336-342). Yet none of the chief Modernist writers can be said to have put forward any definite programme of ecclesiastical reform. They urge rather

that Church authority should remember of what spirit it is, what spirit it exists to serve and extend.

'The Church is the hierarchy with its traditional concepts, and it is the world with its continuous hold upon reality, with its continuous reaction upon tradition; the Church is official theology, and the inexhaustible treasure of Divine truth which reacts upon official theology; the Church does not die, the Church does not grow old, the Church has in its heart more than on its lips the Living Christ, the Church is a laboratory of truth in continuous action' (*ib.* p. 293).

Only when possessed by such a conception of her character and mission will the Church discover what reforms she needs to make her equal to both in the profoundly changed circumstances of contemporary life. It is the conception which has inspired the Modernist social reformer also. He has aimed at making Christianity the leaven of national, political, social, and economic life, and therefore the principle of a larger and humaner life which may embrace and harmonize all these. He has conceived of the Church as an instrument of world-civilization rather than of world-renunciation, and of world-renunciation only in so far as it is involved in and necessary to a genuine world-civilization. And so he has tried to understand sympathetically and to co-operate with all the generous hopes and endeavours of the modern democratic movement, whether among Churchmen or among those who are outside the Church's pale. It has been perhaps the chief burden of his offence in the eyes of authority. The Modernist social reformer has been at one with the Modernist ecclesiastical reformer in thinking that the Church needs especially to be saved from the danger of becoming increasingly a clerical autocracy, exacting from the laity as the sum of their duty a passive submission to its decrees. It may be said in conclusion that the one purpose which was common to all the allied but independent movements grouped together under the name of Modernism was the self-reform of the Church, a reform inspired by belief in life, in the totality of human action, as itself most likely to provoke man's need of God and to ensure a genuine satisfaction of that need—a reform, therefore, which was to be sought along the lines of contemporary thought and action. It was a generous purpose, arising out of a genuine revival of intelligent religious faith. Though authority, taking a different view of the religious needs of the time and of the method of their due satisfaction, has succeeded in suppressing the open activity of the movement, it is as yet impossible to predict its ultimate success or failure. One thing, however, may with some confidence be asserted, viz. that its apparent failure for the moment has been due less to the action of authority than to the prevailing lack of interest among the Latin peoples in thought about or discussion of religious questions. If that interest should ever be revived, it is certain that it will demand and procure throughout the Latin churches reforms similar in inspiration, in range, and in effect to those for which the Modernist leaders contended during the last decade of the 19th cent. and the first decade of the 20th.

LITERATURE.—For the history of Modernism the following books are the most important: A. Houtin, *Histoire du modernisme catholique*, Paris, 1912, *La Question biblique chez les catholiques de France au XIX^e siècle*, do. 1902, and *La Question biblique au XX^e siècle*, do. 1906; J. Schnitzer, 'Der katholische Modernismus', in *Zeitschrift für Politik*, v. 1 [1911]; J. Kübel, *Geschichte der katholischen Modernismus*, Tübingen, 1909; M. Peire, *Autobiography and Life of George Tyrrell*, London, 1912; A. Loisy, *Choses passées*, Paris, 1913. Among the chief Modernist documents are: A. Loisy, *L'Evangile et l'Eglise*, Paris, 1902, *Autour d'un petit livre*, do. 1903, *Simple réflexions*, do. 1908, and *Quelques Lettres*, do. 1908; G. Tyrrell, *A Much-Abused Letter*, London, 1906, *Les Grands*, do. 1904, *Les Crédents*, do. 1907, *Through Scylla and Charybdis*, do. 1907, *Medievalism*, do. 1908, *Christianity at the Cross-Roads*, do. 1909; L. Laberthonnière, *Essais de philosophie religieuse*, Paris, 1903, *Le Réalisme chrétien et l'Idéalisme grec*, do. 1904;

E. Le Roy, *Dogme et critique*, do. 1907; F. von Hügel, *The Mystical Element of Religion*, London, 1908; G. Semeria, *Scienza e fede*, Rome, 1903, *Dogma, gerarchia, e culto*, do. 1902; R. Murri, *La Vita religiosa nel Cristianesimo*, do. 1907, *Della Religione, della chiesa, e dello stato*, Milan, 1910; U. Fracassini, *Che cos'è la Bibbia*, Rome, 1910, *Il Programma dei modernisti*, do. 1907, Eng. tr., London, 1908. To these may be added an excellent anthology, representative of the chief Modernist writers of Germany, France, Italy, and England, selected by J. Schnitzer, and published under the title *Der katholische Modernismus* in the series *Dre Klassiker der Religion*, Berlin, 1912. Unfortunately this anthology bears the same title as the same author's critical study of Modernism mentioned above. The chief pontifical condemnations are conveniently given in Denzinger¹, nos. 1701-80 ('Syllabus errorum'), 2001-66 ('Lamentabili'), 2071-2109 ('Pascendi'), 2145-47 ('anti-Modernist oath'); and all the documents are collected by A. Vermeersch, *De Modernismo tractatus*, Bruges, 1910 (cf. also his art. 'Modernism,' in *OE x.* [1911] 415-421).

A. L. LILLEY.

MOGGALLĀNA.—Moggallāna was one of the two chief disciples of the Buddha. He was a Brāhman by birth, and his mother's name is given in the *Divyāvadāna* (p. 52) as Bhadrakanyā. Nothing is known of his youth, but in a very early document¹ we are told the story of his conversion.

There was a Wanderer (or Sophist) at Rājagṛhanamed Sañjaya² Moggallāna and a friend of his, another young Brāhman from a neighbouring village, had become 'Wanderers' (*paribbhāgā*) under Sañjaya. Each had given his word to the other that the first to find 'ambrosia' should tell the other. One day his friend, Sāriputta, saw Assaji, another Wanderer, passing through Rājagṛha on his round for alms. Struck by Assaji's dignified demeanour, Sāriputta followed him to his hermitage and, after compliments had been exchanged, asked him who was his teacher and what was the doctrine he professed, seeing that his mien was so serene, his countenance so bright and clear. 'There is a great man of religion, one of the sons of the Sākyaas, who has gone forth from the Sākya clan. He is my teacher; it is his doctrine I profess,' was the reply. 'Well, what is the doctrine?' asked Sāriputta. 'I am but a novice, only lately gone forth. In detail I can not explain, but I can tell you the meaning of it in brief.' Sāriputta told him that that was just what he wanted—the spirit, not the letter, of the doctrine. Then Assaji quoted a verse:

'Of all phenomena sprung from a cause
The Teacher the cause hath told;
And he tells, too, how each shall come to its end,
For such is the word of the Sage.'

On hearing this verse Sāriputta obtained 'the pure eye for the truth'; that is, the knowledge that whatsoever is subject to the condition of having an origin is subject also to the condition of passing away. (This is the stock phrase in the early Buddhist books for conversion.) He at once acknowledged that this was the doctrine that he had sought for so long a time in vain. He went immediately to Moggallāna, and told him that he had found the ambrosia, and, when he explained how this was, Moggallāna agreed with him in the view that he had taken, and they both went to the Buddha and were admitted into his order.

The story here summarized is repeated, in almost identical terms, in various commentaries.³ It is curious in two ways. In the first place, who, on being asked to give the spirit of the Buddhist doctrine in a few words, would choose the words of Assaji's verse? One may search in vain most manuals of Buddhism to find any mention of the point raised in the verse;⁴ and yet the verse has been so frequently found on tablets and monuments in India that Anglo-Indians are wont to call it, somewhat extravagantly, 'the Buddhist creed.' The Buddhists, of course, have no creed in the European sense of that word, but any one who should draw up one for them ought to include in it a clause on this matter of causation. The quotation may very well have made a special impression upon Sāriputta and Moggallāna. They had already renounced the sacrifice as a satisfactory solution of the problems of life, and were seeking for something more satisfactory than the vague hints now to be found only in later passages, such as *Isā* 14, where the ambrosia is brought into a mystic connexion with cause and with passing

¹ *Vinaya*, ed. H. Oldenberg, i. 39-44; translated in Rhys Davids and H. Oldenberg, *Vinaya Texts*, i. 144-151.

² It is not stated that he was the same as the Sañjaya of *Digha*, i. 58, the famous 'eel-wriggler'.

away. Here, in this new theory of causation, was a quite different view of things, which seemed to these inquirers to meet the case.

It is also, at first sight, curious that they should have called this particular doctrine 'ambrosia' (*amata*). Though this expression was no doubt first used of the drink that preserved the gods from death, it must before the rise of Buddhism have acquired, among the Wanderers, the secondary meaning of salvation as being the ineffably sweet.¹ It is true that the other idea of salvation, as being a deliverance (from evil, or from the eternal round of rebirths and redeaths), is also found in pre-Buddhist works (see *MOKṢA*). But it was natural, in the beginnings of speculation, to have varying attempts at the expression in words of so complicated a conception; and it is improbable that the early Buddhists invented such a phrase as ambrosia, connoting, as it does, so much of the earlier polytheism.

Moggallāna is frequently mentioned in the canon, and usually with the epithet Mahā ('the Great'). A number of verses ascribed to him, including one long poem and several shorter ones, are preserved in the anthology called *Theragāthā* ('Psalms of the Brethren').² The *Dīgha* is curiously silent about him; but a whole book is assigned to him in the *Sāmyutta*; and about two score of passages in the *Majjhima* and the *Ānguttara*, and elsewhere in the *Sāmyutta*, record acts done or words spoken by him.³ We need not give the details of these passages. The general result of them is that he was considered by the men who composed them to have been a master of the philosophy and of the psychological ethics, and especially of the deeper and more mystical sides, of the teaching. There is, e.g., an interesting passage where the Buddha compares Sāriputta with Moggallāna:

'Like a woman who gives birth to a son, brethren, is Sāriputta to a young disciple, like a master who trains a boy so is Moggallāna. Sāriputta leads him on to conversion, Moggallāna to the highest truth. But Sāriputta can set forth the four Aryan Truths and teach them, and make others understand them and stand firm in them, he can expound and elucidate them.'⁴

In one characteristic Moggallāna is stated to have been supreme over all the other disciples. This is in the power of *iddhi* ('potency').⁵ Both word and idea are older than the rise of Buddhism; and the meaning is vague.⁶ The early Buddhists, trying, as they often did, to pour new wine into the old bottles, distinguished two kinds of *iddhi*—the one lower, intoxicating, ignoble; the other higher, temperate, religious.⁷ The former has preserved for us the belief common among the people, the latter the modification which the Buddhists sought to make in it. The former reminds us of the *mana* of the South Seas, or the *orenda* of some American tribes, or sometimes of the strange accomplishments of a spiritualistic medium. Birds have *iddhi*, with especial reference to their mysterious power of flight.⁸ Kings have *iddhi*⁹ of four kinds (differently explained at *Dīgha*, ii. 177 and *Jātaka*, iii. 454). It is by the *iddhi* of a hunter that he succeeds in the chase.¹⁰ *Iddhi* is the explanation of the luxury and prosperity of a young chief.¹¹ By *iddhi* one may have the faculty

of levitation, or of projecting an image of oneself to a distant spot, or of becoming invisible, or of walking on water, or of passing through walls, or of visiting the gods in their various heavens.¹ All these are worldly *iddhi*, the *iddhi* of an unconverted man. That of the converted, awakened man is self-mastery, equanimity.² Both these kinds of potency were regarded as natural, that is, neither of them was, according to Indian thought, what we should call supernatural. And neither of them, in Buddhist thought, was animistic, that is, either dependent upon or involving the belief in a soul as existing within the human body.

In both these respects of *iddhi*, the worldly and the spiritual, Moggallāna, in the oldest records, is regarded as pre-eminent. An amusing and edifying story is preserved of the way in which, like an ancient St. Dunstan, he outwits the Evil One.³ We are also told how, in order to attract the attention of the gods to the very elementary exposition of ethics that he thought suitable to their intelligence, he shook with his great toe the pinnacles of the palaces of heaven.⁴ Other instances of Moggallāna's instructing the gods are given in the *Moggallāna Sāmyutta* referred to above, and in the *Ānguttara* (iii. 331, iv. 85), while two anthologies, probably the latest and certainly the most dreary books in the canon, the *Vimāna Vatthu* and the *Peta Vatthu*, consist entirely of short poems describing interviews which Moggallāna is supposed to have had with spirits in the various heavens and purgatories.

Most of the episodes in which Moggallāna figures are localized, that is, the place where the incident or conversation took place is mentioned by name. The names are very varied, and it is clear that no one place could be regarded as his permanent residence.

Tradition has preserved no further account of his life, but the manner of his death is explained in two commentaries, the two accounts being nearly identical.⁵ Both Sāriputta and Moggallāna died in the November of the year before the Buddha's death, just before the Buddha started on his last journey.⁶ Sāriputta died a natural death; Moggallāna, it is said, was murdered, at the instigation of certain jealous Jain monks, by a bandit named Samana-guttaka, at the Black Rock cave on the Isigili Hill near Rājagaha.

When Cunningham opened the topes (memorial mounds) at Sānchi, he found in one of them two boxes containing fragments of bone and inscribed respectively 'Of Sāriputta' and 'Of Moggallāna the Great' in Pāli letters of Aśoka's time.⁷ A similar discovery was made in the neighbouring group of topes at Satdhāra.⁸ It is evident that more than two centuries after their death the memory of the two chief disciples had not yet died out in the community, and that the Buddhist laity who erected these monuments considered it suitable that their supposed relics should be enshrined in the same tomb.

The name Moggallāna was occasionally adopted as their name in religion by candidates for the order until the 12th cent. of our era. The belief that the power of *iddhi* had been actually exercised by Moggallāna the Great and others in the ancient days is still held by those of the orthodox who adhere to the ancient tradition, though, except as practised long ago, the belief in it soon died out. There is no evidence, later than the canon, of any

T. W. RHYS DAVIDS.

MOKṢA (Skr., also *mukṭi*) and **VIMUTTI** (Pāli, also *(vi)mo(h)kha*).—These terms, other prefixes being sometimes substituted, are all derivatives from *mucḥ*, 'to let go', 'discharge', 'release', and, with varying import, are identical in primary meaning with our 'deliverance', 'emancipation', 'freedom', 'liberty', 'release'. Whichever equivalent be selected, the inquirer may start with two general way-marks. In the first place, the concept in question has a negative side, viz. a having got loose from, or rid of, and a positive side, viz. the coenasthesis, or general sense of expanded outlook, calm, security, attainment, power to be and do, without which the 'getting freed from' were in some cases too costly a gain. If these two aspects be held together in the mind, then the common terms for them, stated above, may—and this is the second way-mark—be considered as, more perhaps than any other idea, the pith and kernel of the religious faiths of India, and as coming nearer to the Christian 'salvation' than any other. It should, however, be added that the concept grew within those faiths, and that it was by no means always and everywhere given this paramount emphasis and importance. Awareness of emancipation as such, or of its absence and desirability, is not patent in the earliest recorded expressions of the Indian mind. The vital importance of solidarity, either with tribal custom and convention or with the decrees and the very life of his gods, is far more pressing on the man of primitive culture than is any revolt or self-exclusion from, or independence of, any order or destiny, socially or divinely imposed on all. Moreover, the particular deliverances or riddances that came in time to be generalized under a common notion varied in kind.

Before making good these general considerations by analysis, it may be well to guard the reader of translations from Indian literature against gaining an inaccurate idea of the frequency of allusions to 'freedom,' etc. Perhaps no language is as rich in privative or negative inflexions as is that of the Indian classics, whether it be Vedic, Prakrit, Pāli, or Sanskrit. We have ourselves a few terms where the negative form exceeds, in inspiring emphasis, the positive form—e.g., independence, infinite, immortality, etc. Such terms are very numerous in Indian literature, and it often happens, notably in translations by Max Müller and Fausbøll, that, to give the force or elegance of the originals, words with a negative prefix—*a*, *nī*, *vi*—are rendered by 'free from,' and even 'freedom from.'

Thus we find such renderings as 'free from evil,' *a-pāpa*; 'free from fear,' *a-bhaya*; 'free from grief,' *vi-śoka*; 'free from desire,' *nīṣkāma*; 'free from the body,' *a-śarīra*; 'free from decay,' *vi-jara*, *vi-mṛtya*, *a-mṛta*; and many others, notably, 'being freed from good and freed from evil,' *vi-sukṛta*, *vi-duṣkṛta*, i.e. 'sundered from (vi) the well-done and the ill-done,' in other words, rid of the effects of his actions or *karma* (*Kaṣṭhaki Upaniṣad*, i. 4).

Many other 'liberties' taken by the lavish use of 'free from' go to swell this misconception. The phrase just quoted occurs in an archaic account of *samsāra*, or transmigration. Now, it is true that the *mukṭi*, or *mokṣa*, concept-centres in the release of the soul or self, not only from this body, but also from all

future bodies. But the only term expressive of release here is in the translation. 'All who depart from this world go to the moon . . . if a man make reply (on arriving) to the moon, it passes him on' (*atisṛjate*), i.e. he does not return to be reborn on earth. This is translated, in SBE, 'sets him free.' Further on, in ii. 7, in an ancient sun-hymn occurs the unique appellation *varga*, 'twister' or 'turner': 'Thou art the twister! twist thou the sinning of me' (*vargo 'si pāpmānaḥ me vṛdhāḥ*). This is translated (*ib.*): 'Thou art the deliverer, deliver me from sin.' In the *Taittirīya Upaniṣad*, ii. 9: 'he frees himself' is, literally, *apṛate*, 'he saves himself.' In the *Bṛhadāraṇyaka Upaniṣad*, iv. iv. 23, Regnaud renders *uparatas* (M. Müller: 'satisfied,' Deussen: 'entsagend') by 'libre de tout désir.' In the *Chhândogya Upaniṣad*, viii. 1. 6, the words rendered 'freedom in all the worlds' are, literally rendered, 'faring as they list' (*kāmachāra*); and in *Maṇḍūkya Upaniṣad*, i. 2, 'had obtained freedom from all desires' (M. Müller) is, in the original, 'had turned to renunciation' (Deussen).

It is very possible that the translators were encouraged in this habit by consulting the mediæval commentaries of Śaṅkara, in whose philosophy *mokṣa* was a well-evolved concept, and who uses it liberally in his paraphrases.

For instance, in *Kāṭha Upaniṣad*, n. vi. 18—'Nachiketa became free from passion (*vi-rajā*) and obtained Brahman'—the last clause is explained as 'became freed' (*mukto 'bhavad*).

In being thus advised to discount much factitious emphasis laid in these ancient works on a notion that was evolving in them, the reader may contend that most at least of the translations criticized render only what is really implicit in the various riddances referred to, namely, a liberty emerging through the abandonment of this or that. It is true that the Indian mind did indeed work its way to a positive concept of *mokṣa* or *vimutti* chiefly through an austere elimination viewed as the getting relieved of discarded burdens. Even a Buddhist commentator of probably the 5th cent. A.D. chose to define *vimokṣa* as so-called 'because of the being set free (*vimucchanato*) from opposing things' (*Puggala-Paṭṭhānti Com.*). But the state of emancipation, as a conscious assurance, belongs none the less to that more evolved and positive side of its psychology which, in the West, is usually associated with political autonomy and social or personal self-congratulation. The freedom in which the Indian gloried was spiritual:

'O free indeed! O gloriously free am I
In freedom from three crooked things . . .
Ay, but I'm free from rebirth and from death,
And all that dragged me back is hurled away'

(*Psalms of the Sisters*, 11).

'Henceforth in the real (or true) Brahman he becomes perfected and another. His fruit is the *untying of bonds*; without desires he attains to bliss imperishable, immeasurable, and therein abides' (*Maitrāyaṇa Upaniṣad*, vi. 30).

And *Kāṭha-vatthu*, ix. 1, is intended to bring out the fact that, whereas one enters on 'the Path' to salvation, full of a sense of dangers to be got rid of, the gradual putting off of 'fetters' converts this consciousness into expectation of the bliss of perfected deliverance, i.e. of Nibbāna.

For *vimutti* is 'comparable to' Nibbāna, and 'the holy life is planted on, and leads to and culminates in Nibbāna' (*Majjhima*, i. 304; *Saṃyutta*, v. 218).

There is but the faintest anticipation of this in the Vedas. The only 'setting free' in those pages is the resting-place (*vimochana*) where horses are eased for a while from harness. Gods are called upon to deliver from sin—but it is such 'as clings to our bodies' (*Rigveda*, vi. lxxiv. 3; cf. i. xxiv. 9, viii. xviii. 12, *mañchātām*)—and to let the enemy catch snares and be slain (vii. lix. 8). But such a prayer as 'May I be detached from death like a gourd from its stem, but not from the immortal [*amṛta*]' (*ib.* 12) is the precursor of the later thought. Beyond such expressions the vocabulary of freedom was, it would appear, unborn.¹ The Brāhmanas give, in the elaborate ritual of the altar-building, a rite to be chanted while laying the 'bricks of saving' (*apṛtaḥ*), that is, from evil

¹ *Mukṭi* is said in O. Böhtlingk and R. Roth (*Sanskrit-Wörterbuch*, Petrograd, 1855-75, v. 801) to occur once in the *Satapatha Brāhmaṇa*, but it is a faulty reference, and the present writer cannot trace it.

and from death (*Śatapatha Brāhmaṇa*, VIII. iv. 2), but elsewhere (XI. iii. 3) it is said that none but a *brahmachārīn* or *religieux* is exempted by Brahman from death, and only on the condition that he daily tends the sacred fire. Not here any more than in the Vedas does the grasp and realization of an emancipated consciousness appear. It is still apparently only inchoate in the Upaniṣads ranked as the oldest. Of these the *Kena Upaniṣad* is silent on the matter. In the *Aitareya Aranyaka*, an ancient mystic nature-monologue, there are hymns prescribed for rites proficiency in which brings the compassing of 'all desires.' These desires are enunciated—long life, luck, wealth, fame, etc.—but 'liberty' is not among them. Progress in spirituality is revealed in the *Taittirīya* and *Chhāndogya Upaniṣads*, but the emancipation-spirit is still immature. The former shows the growth of it at the end of the second part:

'He who knows the bliss of that Brahman whence speech, whence mind turn back, not finding it, . . . tortures not himself with: "What good have I left undone? What evil have I done?" He, knowing this, saves himself.'

The latter (*Chhāndogya*, VI. xiv. 2) shows a parallel growth in the parable of the man brought blindfold from his Gaṇḍhāra home into the desert, and thence, with sight restored, directed how to get home again; even so does one who has gained true knowledge through his teacher know that

'I shall only so long belong to this [system of rebirth] till I am emancipated (*vimokṣye*); then I shall go home' (so Deussen).

And in the closing section occurs the favourite simile for deliverance:

'Freeing myself from the body, as the moon frees himself from Rāhu's jaws, I go into the world of Brahman.'

The same simile is hinted at in the *Kaṭha Upaniṣad*:

'He who has perceived the soundless, the intangible . . . the eternal . . . the unchangeable, is freed from the jaws of death' (I. iii. 15).

But in the following passage (*ib.* II. v. 1) we see how the idea is finding expanded expression:

'There is a town with eleven gates of the Unborn, of thought infuquate. Whoso approaches (Deussen: 'honours') it, he grieves no more and, emancipated, is set free (*vimuktas cha vimukhyate*). Verily this is that.'

From what 'set free' is not unambiguous (M. Müller: bonds of ignorance; Deussen: the body), but 'liberty' is becoming realized as an ideal.

Turning now to the long *Bṛhadāranyaka Upaniṣad*, we come at length to an emphatic designation of certain attainments as constituting 'liberty' (III. i. 3 ff.). The priest asks the Veda-teacher how he who institutes a sacrifice may be freed from the influence and thralldom of death, of day and night, and of the waxing and waning moon, and how the bright worlds shall be reached up a stairless sky. By this or that celebrant priest are given the several replies, and to each reply is added: 'That is liberty, that is utter liberty (*sā muktīḥ sā atimuktīḥ*).' These are then termed the *atimokṣas*.

It is noteworthy that, while these four 'liberations' are alone so emphasized, aspiration does not (in the adjacent section) stop at heaven. Urged by another interlocutor, a Kṣatriya, again and again, with proffered largess, to 'speak of that higher thing which avails for emancipation,' Yājñavalkya, the Veda-teacher, finally discourses of the soul and of beholding the soul as God.

'Scarce visible and old there lies a path
That reaches into me, was found by me.
Thereon the wise whose is the Brahma-love
Fare onward to the world of light, and thence
O'erpassing that are utterly released'
(*utkrāmya svargān lokān ito vimuktāḥ*).

'As the slough of a snake lies on an anthill dead and cast away, there lies this body, but that disembodied, that immortal, that life, is Brahman only, only light' (IV. iv. 8, 7).

This with its context is not designated as *atimokṣa*, or as *mukti*. When we find again the snake-skin simile, in the *Prasna Upaniṣad*, v. 5,

where the emancipation described is that of spiritual ecstasy rather than of a disembodied spiritual unity, or full realization of the same, the freedness, on the one hand, is made more explicit, and, on the other, the liberation is described as 'from evil.' But, whether emancipation be from the power of the body during life or from the body itself and from all subsequent bodies at final death, the main positive consciousness, realized in this early stage of Vedāntist *mokṣa*, is, intellectually, discernment of the identity between the Absolute, Brahman or Atman, and the soul located in man, and, emotionally, the sense of security and assurance resulting therefrom. For the individual becomes invested with the powers, negatively expressed, of the Absolute Being: undecaying, imperishable, unattached, unbound, unlimited, unsuffering, etc. (*Bṛhadāranyaka Upaniṣad*, IV. ii. 4).

'If a man clearly beholds this self as lord of all that is and will be, . . . who has entered into this patched-together hiding-place, he is creator, maker of all, his is the world, he is the world . . . then is he no more afraid' (*ib.* IV. iv. 13, 15).

Proceeding to the less ancient Upaniṣads, such as may have been influenced by Buddhist and other developments, we find in the 'Upaniṣad of the Shavelings' (*Mundaka*) the compound *parimukhyanti* (III. ii. 6), 'completely freed':

'They who have grasped the sense of Veda-love,

All anchorites, their inmost being purged

In earnest resignation, at the final death

In Brahma-heaven become immortal, wholly freed.'

But in the *Svetāsvatara Upaniṣad*, and the allied but perhaps still later *Maitrāyaṇa Upaniṣad*, the reader finds himself among new ideas jostling against the older ones. These are yet present—soul and Brahman, release from life and death, and knowledge as giving release—but the current has widened, if not deepened. The theism of Yoga, the theory of separate souls and their self-emancipation from conditioned, mutable concomitants of the Sāṅkhya system, the critical, scientific attitude of Buddhism, and the tragic earnestness of the two former and of Jainism—all these have caused a revolution in outlook that strikes a new note at the very first words:

'Om! The Brahman teachers say: What is the primal cause, what Brahman? Whence are we?' (*Svetāsvatara Upaniṣad*, I. 1).

Through it all the *mokṣa*-idea appears as the work of a creator:

'The Deva' or *Iśvara* ('Lord'), 'himself self-caused, is the condition (the cause) of the maintenance and the movement (*sthiti, saṁsāra*), the bondage and the liberation (*bandha, mokṣa*) of the world' (*ib.* VI. 16). To know him, to 'see, making his own being a lamp, the being of the Lord,' is to have 'all fetters fall away, all sufferings destroyed, and the ceasing of birth and death come to pass' (*ib.* I. 11, II. 16). 'I, seeking for freedom, take in him my refuge, supreme Causeway to that which-is-not-dead (*amṛtasya parāṁ setum*), fire that burneth where no fuel is' (*ib.* VI. 18 f.).

'As soon as man might wrap the atmosphere

About himself like any cloak, as reach

The end of suffering, not knowing God' (*ib.* VI. 20).

Yet both here and in the *Maitrāyaṇa Upaniṣad* the Atmanistic monism is none the less maintained, and all personal deities are recognized as names of the self (IV. v. f., VI. v. 8).

Much, it is true, is made of a disparate 'element-soul' or self, bound by the fetters of the fruits of good and evil, crippled, and as one in prison, till 'by knowledge, by *tapas* (austerities), by meditation he is freed from those things by which he was filled and overcomes, and obtains union with the Atman' (IV. II. 4).

Yet this concept no longer satisfies:

'Having seen his own self as the Self (or soul), he becomes selfless (*nirātman*); and, in virtue of selflessness he is to be conceived as immeasurable, unconditioned. This is the highest mystery, betokening emancipation . . . through selflessness he has no part in pleasure or pain, but attains absoluteness (*kevalatva*)' (VI. xx. f.).

a wondrous blend of Buddhist and Sāṅkhya concepts.

Yet another new term reveals a fresh and notable development of the *mokṣa*-consciousness, that

of 'autonomous,' or independent—*svatantra* (v. xxviii. 38):

'Independent, standing on his own greatness, he contemplates the cycle of rebirth as it were a rolling chariot-wheel' (that has ceased to convey him). Of the 'autonomy' prescribed in and vital for Buddhism (*Digha Nikāya*, ii. 100, and elsewhere).

The psychology also of the process of self-liberation has attained an interesting development (*Mātrāyāna Upaniṣad*, vi. xxxiv.). *Manas* (i.e. the mental mechanism of sense-cognition, a narrower concept than 'mind') is, like Īśvara himself, called 'the cause of bondage and of liberty.' And to bring it to its right anchorage, to bring it, in fact, 'to an end in the heart' (the seat of the soul) — 'that is knowledge, that is *mokṣa* . . . that man is wholly freed (*parimucyate*).' Nor does this austere discipline, nor does the evolving power of introspection dull the rapture associated in the earlier books with this setting free. With a poet's licence, or through theistic influence, the poet pictures the Absolute soul (Brahman) as reciprocally 'longing for a true (or real) man' (ib. vi. xxx.).

That the yet later Upaniṣads could use *mokṣa* as practically synonymous with religion appears in the *Mukṣi Upaniṣad*, which recommends him who seeks for *mokṣa* to study the *Māṇḍūkya Upaniṣad*, and, if that suffice not, certain others, and so on till all are included. The one named consists in a concise effort to define the essence (*sāra*) of the soul or Brahman. More pertinent is the definition of *mokṣa* in another of the aforesaid Upaniṣads, the *Sarva-sāra*, as the destruction of the illusion that the material body, or any other factor of the phenomenal self, is the Ātman ('soul'), who is God. The illusion is the bond, ignorance its cause. (This illusion is the first of the 'Ten Fetters' of Buddhism.)

Mokṣa as the supreme aspiration runs through that best known portion of the *Mahābhārata* epic called the *Bhagavad-Gītā*. The allusions occur almost entirely in the parts judged by R. Garbe to be older (see BHAGAVAD-GĪTĀ). We find *mokṣa* applied to liberation from evil (iv. 16), from the body (v. 23), from lusts and anger (v. 26), from decay and death (vii. 29), from works (ix. 28), from the illusion of opposites (xv. 5). But, however the bondage be conceived, release is effected, here also, by a spiritual union with Brahman, conceived as, or as behind, Īśvara, lover of the human soul, who invites his utter self-surrender, and bestows on him, in virtue of that surrender, release from this or that form of limitation (cf. ix. 26 f., xii., xiii. 9 f.). Another section of the epic is called 'the *mokṣa*-doctrine'; yet it is in the *Anugītā* section that the complete picture of the emancipated individual occurs (*Adhyāya*, 19). In this we see him contemplating Ātman, attaining Brahman, sunken in this one goal, oblivious as to the past, freed from results, heedless of 'this' or 'that.' Yet he is a friend to all, suffering all, master of sense and self, fearless, wrathless, meek, upright, treating all creatures as if they were he, indifferent to opposites, lost to social and domestic ties, wanting naught, cleaving to naught, detached. 'He is in every sense free.' All classes, the trader and the labourer, too, may enter on this upward way, and even women, but much more the Brāhman and the Kṣatriya who study, joy in their duty, and hold the Brahma world as highest; for the fruit of achievement is liberty, and the utter abatement of ill. Beyond that lies no greater bliss.

This notable climax is in complete harmony with Buddhist thought. It is more than probable that, before the epic attained its final form, the influence of Buddhist culture had made itself deeply felt, and that to it is largely due the breaking down of class and sex disability to attain the highest, the humaneness of the lonely saint, and the crucial emphasis on the ending of suffering. *Dukkha* ('ill')

is not, of course, absent from the earlier Vedāntic literature, but it attains emphasis only in that which must have felt the impress of Buddhism, to say nothing of Jainist and Sāṅkhyan influence. Now, in the doctrine of Arahantship, or the release from continued deaths and rebirths by the perfected character, *vimutti* is not only dominant to the same extent as is *mukṣi* (*mokṣa*) in Vedānta, but the treatment of it is more consistent and therefore, perhaps, simpler. In it *vimutti*, *vimutta*, 'freedom,' 'freed,' express the actual and consciously realized achievements; *vimokṣa* (*kha*) nearly always refers to certain prescribed courses of rapt mentality, whereby such a state might be sooner acquired, or, if acquired independently, quickened — a sort of morning sacrament (*Digha Nikāya*, ii. 112; *Puggala-Paññatti Com.* [JPTS, 1914, p. 177]):

'He who before he breaks his fast can touch
Mental emancipation's eight degrees,
In grade ascending and so back again'

(*Psalm of the Brethren*, 1172).

Hence the terms 'freed by understanding,' 'freed-both-ways,' meaning emancipated by the work of understanding only, or emancipated both thus and by the eight *vimokṣas* or similar exercise in *samādhi* (cf. *Majjhima Nikāya*, i. 477).

Moreover, *vimutti*, as expressing final achievement, with the rapturous assurance of it, was at the heart of the Buddhist Dhamma from the first. In that which is recorded as his second sermon — the *Anatta-lakkhaṇa Sutta* (*Vinaya Texts*, i. 101; cf. 107) — Gotama Buddha stated how emancipation grew out of the rejection of the cosmic soul as immanent in and identical with the sense of individual personality ('self' being only an abstract idea inseparable from bodily and mental factors). Perception of the absence of Ātman-qualities (permanence, omniscience, bliss) in these denuded them of factitious attraction. Craving to renew them in future lives fell away. The freed individual knew that he was free, and thenceforth needed only to await the final hour in quieted but blissful well-being and righteous living. Again, in sending forth his first missionaries, the Buddha named as his and their supremely adequate qualification:

'I am freed from all snares human and divine; ye are freed from all snares human and divine . . . Go ye now . . . for the welfare of the many . . .' (*Vinaya Texts*, i. 1121).

The subjective awareness of the freed state, held to be also valid objectively, is further enhanced by the use of such terms as 'realizing,' 'touching,' 'tasting' (*Digha Nikāya*, iii. 230; *Majjhima Nikāya*, i. 477; *Anguttara Nikāya*, ii. 244, i. 36, iv. 203, etc.).

'Wherefore thus must ye study: "more and ever more striving our very best shall we realize supreme emancipation"' (*Anguttara Nikāya*, iii. 218).

'Having liberated his mind with respect to things that should be let go he touches perfect liberty' (ib. ii. 196; cf. 244).

'The eight deliverances (*vimokṣā*) are to be realized by personal contact' (*Digha Nikāya*, iii. 230).

'Few are they who obtain the taste of liberty' (*Anguttara Nikāya*, i. 36).

'As the ocean has but one taste, that of salt, so has Nibbāna but one taste, that of emancipation' (ib. iv. 203; *Vinaya Texts*, iii. 804).

Awareness of full attainment was realized as a timeless moment of ecstatic consciousness (*Kathāvatthu*, iii. 4), but the reverberations formed an abiding joy:

'Gladness springs up within him, and rapture thereto; the thoughts of his enraptured consciousness become tranquilized; thus tranquilized he knows bliss; and in that bliss his consciousness is stayed' (*Digha Nikāya*, iii. 241. 'The five occasions of emancipation'; cf. i. 73).

Imagination plays about the term:

'He with fair flowers of Liberty enwreathed,
Sane and immune, shall reach the perfect peace'

(*Psalm of the Brethren*, 100).

'Above the rolling chariot of this earthly life spreads the silken canopy of emancipation' (*Samyutta Nikāya*, iv. 293).

And in the later *Questions of King Milinda*:

'As the ocean is all in blossom with the innumerable . . . ripple of its waves, so is Nibbāna all in blossom, as it were, with

the innumerable, diverse, delicate flowers of purity, knowledge, emancipation' (iv. viii. 69)

Arahantship, again (*ib.* v. 17), is called 'the Exalted One's jewel of emancipation (*vimutti-ratana*), chief diadem of all'

The three terms here brought together—Nibbāna, Arahantship, emancipation—are largely, though not wholly, coincident in range, presenting different aspects of the ideal, Nibbāna: the having eliminated 'the fires' of evil and of craving for continued life human or divine; the contemplation of an Ātman-less Absolute; Arahantship: supreme positive attainment in life on earth; Vimutti: the subjective aspect of both, the negative force in it never far off:

'Let go (*muṭṭha*) that which has been, let go what will be,
Let go what thou art midst of, thou that dost
Transcend Becoming! On every side freed-minded
Thou'lt not again come toward birth and dying'

(*Dhammapāda*, 348).

But the self-knowledge that he is free is a clause in the formula confessing Arahantship:

'Emancipated by right (or perfect) gnosis (*sammadaññā-vimutta*): 'in him thus set free there arises the knowledge "freed"! . . . (Nikāyas, *passim*; *Dialogues*, i. 93).

And the unity connecting the negative and positive aspects may be discerned in the *Sutta Nipāta* verses:

'In whom no sense-desires do dwell,
For whom no craving doth exist,
Who hath crossed o'er [the sea of] doubt:—
What sort of freedom [waits] for him?
No other freedom [waits] for him' (1089 f.).

In the Nikāyas *vimutti* and Nibbāna are declared to be 'comparable' one with another (in the same thought-category, *Majjhima*, i. 304). But in the *Dhamma-saṅgaṇi vimutti* is distinguished into higher mental freedom and Nibbāna (p. 234; cf. *Digha Nikāya*, i. 174).

As the subject of a distinct group (*khandha*) of religious experience, *vimutti* is ranked in the *Suttas* fourth with the groups 'ethics' (*sīla*), concentrative studies (*samādhi*), and insight (*paññā*, *Majjhima*, i. 214; *Anguttara Nikāya*, i. 125, *passim*), while for the Arahant a fifth was reckoned: knowledge and intuition of *vimutti* (*vimutti-ñāna-darsana*, *ib.* i. 182, etc.). Closely associated with the fourfold path to Arahantship, and called, later, modes of progress, avenues, or channels to *vimutti*, are the studies in 'Emptiness,' 'the Signless,' 'the Not-hankered-after' (*Digha Nikāya*, iii. 219; *Samyutta*, iv. 295-297; *Dhamma-saṅgaṇi*, 344 f., and *Compendium of Philosophy*, London, 1910, p. 216).

A very frequent allusion to emancipation in the Nikāyas is that of *chetovimutti paññāvimutti*, corresponding fairly well to emancipation of heart and head. The systematic expansion of ethical emotion was not peculiar to Buddhism (see LOVE [Buddhist]). But the founder of Buddhism is represented (*Samyutta*, v. 118) as claiming that he alone inculcated in such exercises emancipation of the heart.

In this way, in suffusing the idea of more and more beings with (1) love—'let all beings be void of enmity and malevolence,' (2) pity—'let all be set free from suffering,' (3) sympathy—'let all be happy and fortunate,' (4) equanimity—'all are the owners, the heirs of their deeds,' these mental exercises, if fully practised, result in a thorough self-mastery through complete emancipation from the respectively opposed moods of (1) enmity, (2) harmfulness, (3) antipathy, (4) passion (Ledi Sadaṃ, Mahāthera, in a letter to the writer).

Taken alone, apart from that supreme enfranchisement from all the conditions for rebirth, they constituted the best way to Brahma-heavens.

'*Sāriputta*: This, I told Dhānañjani, is the way to share existence with the Brahma gods.

The *Buddha*: Why did you establish Dhānañjani in that inferior Brahma-world, when there was more to be done?

'*Sāriputta*: I judged, lord, that these Brāhmins preferred that heaven' (*Majjhima*, ii. 195).

'All other bases of meritorious acts which are stuff for rebirth (*opādāka*) are not to be compared to the emancipation of the heart by love. That takes all those up into itself, as the moon outshines the stars, the sun the mink, the morning star the night, shining in radiance and in splendour' (*Iti-vuttaka*, 19-21).

But to be emancipated by intuition or insight is to have broken all the ten 'fetters' by the four successive stages of the Ariyan Path—Stream-winning, Once-Returning, Never-Returning, Arahantship—and to have reached the going-out of all fevered desires as to lives on earth or in the heavens (*Digha Nikāya*, iii. 108).

'For not by the slothful nor the fool, the undiscerning, is that Nibbāna to be reached which is the *untying of all knots*' (*Iti-vuttaka*, 102).

The mountain ranges of *vimutti* were the haunts of those who, 'with the world well lost,' had developed the symptoms of life's culminating in its final end. Hence it is in the two works containing the legacies of such matured creatures—the *Sutta-Nipāta* and the anthologies of *Theras* and *Theris*—that the theme of emancipation is maintained most steadily:

'Come now, let us see Gotama, who lion-like
Doth roam alone . . . and let us ask of him

How can we be set free from snare of death?
Declare to us who ask as to the way
How may a man from sorrow be set free'

(*Sutta-Nipāta*, 164 f.).

'Passed he away fraught with the seed of rebirth,
Or as one wholly free? That would we know'
(*Psalms of the Brethren*, 1274).

'And as the sun rose up out of the dawn
Lo! then my heart was set at liberty' (*ib.* 477).

'Whose range is in the Void and the Unmarked
And Liberty:—as flight of birds in air
So hard is it to track the trail of him' (*ib.* 92).

'And see, O Master! Sundari who comes
To tell thee of Emancipation won
And of the night no more to be reborn;
Who hath herself from passion freed (*vīlaraṇā*),
Unyoked from bondage' (*Psalms of the Sisters*, 334).

'Tho' I be suffering and weak and all
My youthful spring be gone, yet have I come,
Leaning upon my staff, and clomb aloft
The mountain peak. My cloak thrown off,
My little bowl o'erturned: so sit I here
Upon the rock. And o'er my spirit sweeps
The breath of Liberty!' (*ib.* 29, 30)

'Passion abandoned, hatred and illusion,
Shattered the bonds, nor is there any trembling
In that the springs of life are wholly withered:—
Like the rhinoceros let him wander lonely'
(*Sutta-Nipāta*, 74).

'E'en as a fish that breaks its net in ocean,
E'en as a fire that turns not back to burnt stuff:—
Like the rhinoceros let him wander lonely' (*ib.* 62).

'Dwelling in love, in pity, and in freedom,
In friendly joy, in balance, each in season,
Nought in the world disturbing his composure:—
Like the rhinoceros let him wander lonely' (*ib.* 73).

The evolution of *mukti*, or *mokṣa*, in Jainism cannot be adequately dealt with till its early literature is more fully accessible. As evolved, the idea is clearly presented above (art. JAINISM, vol. vii. pp. 468, 470).

Similarly the (*vi*)*mokṣa*, or *apavarga*, concept of Sāṅkhyan thought, which survives in medieval commentaries, and which, even in the aphorisms on which these are based, shows a later and a more habile metaphysic than such as the foregoing discussions reveal, will be dealt with in art. SĀṆKHYA. In those aphorisms (*Sūtras*) the individual soul, called *puruṣa*, is conceived as 'neither bound, nor liberated, nor migrating' (lxii.), as is the rest of man's nature, physical and mental. Emancipation consists in having discerned the 'subtle difference between this [dual] nature (*pradhāna*) and the soul' (xxxvii.). 'By knowledge is liberation (*jñānena chāpavargo*), by the opposite is bondage' (xliv.). With this knowledge the work of good and evil is done; the union of soul and organism may 'go on like the potter's wheel revolving from the effect [of his impact]' (lxvii.) after the finished pot is removed, but, when nature thereupon ceases to act, the soul obtains absoluteness (*kaivalyam āpmoti*) (lxviii.).

LITERATURE.—Works quoted from: *The Upanishads*, tr. Max Müller, *SBE* i. [1879], xv. [1884]; P. Deussen, *Sechzig Upanishads des Veda*, Leipzig, 1897; P. Regnaud, *Matériaux pour servir à l'histoire de la philosophie de l'Inde*, Paris, 1876-79 (translates many selections, giving the original as well); P. Deussen, *Vier philosophische Texte des Mahābhārata*, Leipzig, 1906, *Allgemeine Geschichte der Philosophie*, i. pt. 3, iv. 6, do. 1908; *Vinaya Texts*, tr. T. W. Rhys Davids and H. Oldenberg, 3 vols., *SBE* xiii., xvii., xx. [1881-86]; *Questions of King Mūṇḍa*, tr. T. W. Rhys Davids, *SBE* xxxv.-xxxvi. [1890-94]; the four *Nikāyas*, *Dhammapadam*, *Sutta-Nipāta*, and other Pāli works: publications of the PTS, London, 1882 f. (the two last tr. Max Müller and V. Fausboll, *SBE* x.3 [1898]); *Psalms of the Early Buddhists*, 2 vols., and *Points of Controversy* (*Kathāvatthu*), *PTS*; *Dialogues of the Buddha*, tr. of Dīpa Nīkāya, i. (in *SBE*, ii., iii.). The blend of theism and 'ānānism' handed down from the stage of Vedāntist thought indicated in the *Maṭrayāna* and *Svetāsvatara Upanishads*, and developed in the *Bhagavad-Gītā*, may be studied in P. Narasimha's description of *mukti* in 'The Vedāntic Good,' *Mind*, Jan. 1915. Another interesting account of *mokṣa*, with a criticism on P. Deussen's treatment of the place of moral considerations in the doctrine, is by Dvijadas Datta, 'Mokṣa, or the Vedāntic Release,' *JRAS* xx. pt. 4 [1887-88], p. 513.

C. A. F. RHYS DAVIDS.

MOLINISM.—There is no problem in theology more difficult than that which has reference to the knowledge and causality of God, on the one hand, and the liberty and eternal destiny of human beings, on the other. The problem includes three difficulties: (1) How is it possible to reconcile God's foreknowledge with the freedom of the human will? (2) If the entire physical reality of our free acts proceeds from God as the First Cause, how is it possible for our will to be a free cause, or for evil actions to be imputed to us? (3) Given the sincere will of God to save all men, how account for the terrible fact that many die without the light of faith and never attain to eternal salvation?

The endeavours of theologians to throw light on these difficulties have brought forth two systems: Thomism and Molinism. The doctrine of the Thomists, which is the old traditional doctrine of St. Augustine and St. Thomas Aquinas (*q.v.*), was attacked by Molina at the close of the 16th cent.; since then an unending controversy has raged in Roman Catholic schools of theology.

I. **HISTORY OF THE CONTROVERSY.**—In the 13th cent. St. Thomas Aquinas, a Dominican, synthesized the sum of human knowledge with regard to God as the First Cause and Final End of all things in a work called the *Summa Theologica*. Herein is contained all that the human mind, aided by revelation, can know concerning God's providence, universal causality, grace, etc. So great became the renown of St. Thomas for the solidity and sublimity of his doctrine that at the Council of Trent the *Summa Theologica*, alone of all theological treatises, was thought fit to be used in consultation with the sacred Scriptures. The Order of St. Dominic is sworn to love and defend the doctrines of St. Thomas as by hereditary right; and it is their loyalty to these doctrines that has earned them the well-merited name of Thomists.

At the close of the 16th cent. the Jesuit Luis de Molina (1535-1600) published a new doctrine on predestination, grace, free will, etc. The basis of the whole system is the so-called *scientia media*, a theory borrowed by Molina from his master, Pedro da Fonseca, who, knowing it to be entirely new and against the traditional doctrine, had not dared to publish it. Molina's book was published at Lisbon in 1588 and is entitled: *Concordia liberi arbitrii cum gratia donis, divina præscientia, providentia, prædestinatione et reprobatione*. Had this theory been known, says Molina, Pelagianism would never have existed, Luther would not have denied free will, and Semi-Pelagianism would easily have been stamped out. Molina further adds that St. Augustine and the other Fathers would have unanimously approved of this theory of predestina-

tion and this manner of conciliating free will with the foreknowledge and providence of God, if it had been propounded to them (*Concordia*, ed. Paris, 1876, p. 548). This new doctrine, however, did not arrest the teachings of Michael Baius, nor did it prevent the rise of Jansenism (*q.v.*), but was itself the cause of an unending and bitter controversy which has lasted for centuries between Thomists and Molinists. The above assertions of Molina aroused the indignation of the followers of St. Augustine and St. Thomas. Dominic Bafies vigorously attacked the new theory, and so great was the dissension caused by the ensuing controversy that in 1594 the matter came before Pope Clement VIII., who, in 1598, instituted a special board of inquiry, known as the 'Congregatio de Auxiliis.' There were, in all, 181 assemblies of this congregation, which debated the doctrines under discussion. Three condemnations in succession were drawn up by the consultors against Molina. On 13th March 1598 they declared that the *Concordia* and the doctrine of Molina must be unreservedly condemned. On 19th Dec. 1601 they condemned 20 propositions taken from the *Concordia*. At the assembly of the Cardinals (8th March 1606) it was decided to give orders to the consultors to draw up a bull for the condemnation of 42 propositions taken from the *Concordia*. The bull was actually prepared for publication, but on 28th Aug. 1607 Paul v. held a congregation of cardinals in which it was decided to postpone the condemnation. The result of the 'Congregatio de Auxiliis' was, then, a moral defeat for Molinism. So forcibly was this brought home to Acquaviva (the General of the Jesuits) and his counsellors that the Congruism of F. Suarez was substituted for Molinism and imposed upon the Society by Acquaviva by his decree of 14th Dec. 1613. For more than 200 years Congruism (see below, p. 776^b) was taught by the Jesuits in obedience to the decree of Acquaviva, but pure Molinism has now been revived by some Jesuit theologians.

In this matter an important point to be noted is the declaration of Paul v. that both Molinism and Thomism agree in substance with Catholic truth, but differ only as regards the mode of explaining the efficacy of grace, both of which opinions may be held. Innocent XII., in reply to the University of Louvain (7th Feb. 1694), and Benedict XIII., in a brief (*Demissas preces*, 6th Nov. 1724), vindicated the Thomistic doctrine of the efficacy of grace *ab intrinseco* and the gratuity of predestination. Lest, however, the words uttered by Benedict XIII. should be understood to minimize the doctrines of Molinism, Clement XII. said (2nd Oct. 1733):

'We do not wish the eulogies (which we iterate, approve, and confirm) of our predecessors (Clement xi. and Benedict xiii.) in praise of the Thomistic school to detract in any way from the authority of other Catholic schools' (*Bullarium Ord. Præd.* viii. 291).

Since the encyclical *Aeterni Patris* of Leo XIII. (4th Aug. 1879), Roman Catholic schools of theology have done their utmost to claim as their own not only the doctrine, but the very name of St. Thomas Aquinas. In spite of the remonstrances of Thomists, Molinists have endeavoured to drag St. Thomas to their side, and even to impose on St. Thomas the theory of *scientia media*, which, before Molina, was not even dreamed of ('ne per somnium quidem'), as C. Tiphanius, himself a Jesuit, declares.¹ The first crossing of swords took place between R. P. Beaudoin and C. Mazzella. Not long after, G. Schneemann published a work in 1881, in refutation of which A. M. Dummermuth published a work at Paris in 1886, which contains a complete demonstration of the mind of St. Thomas. In 1893 V. Frins essayed a reply, and in refutation of this Dummermuth published another work in

¹ *De ordine deque priori et posteriori*, 24.

1895. Since then there have been many minor publications, chiefly in theological and philosophical Reviews.

II. ESSENCE OF MOLINISM.—I. Natural order.

—(1) *God's foreknowledge and free will.*—The knowledge of God, considered in itself, is one and indivisible; considered with reference to objects which are the term of His knowledge, it is divided according to the diversity of objects into speculative and practical, into necessary and free, etc. The division which concerns us now is that into the knowledge of vision (*scientia visionis*) and the knowledge of simple understanding (*scientia simplicis intelligentiae*). The former has reference to things which have existed, exist, or will exist; the latter has reference to the purely possible, i.e. to objects which have not existed, do not, and will not exist (cf. *Summa Theol.* I. qu. 14, art. 9). Now, if this division is adequate, God must know a future free act by the 'knowledge of vision.' But, according to St. Thomas (I. qu. 14, art. 8, and art. 9 ad tertium), this knowledge necessarily implies an act of God's will or a divine decree. Hence a future free act is known by God by virtue of, in fact *in*, His decree, and therefore no future free act can exist unless God decrees its existence. This is the doctrine of the Thomists.

For Molina this is subversive of the freedom of the human will. Hence, he says, a means must be found whereby God knows a future free act before, and independently of, the divine decree. Now there is a third kind of object, continues Molina, which neither is purely possible nor yet belongs to the category of those objects which, in some difference of time, have actual existence. There is the future event which would exist if certain conditions were realized, which, however, will *not* be realized. Under this head are to be classed all those free acts which, though never destined actually to exist, would exist if certain conditions were fulfilled. These are called conditioned future events (*futura conditionata*, or *futurabilia*); and God knows these by the *scientia media*, a knowledge which is midway, as it were, between that of vision and that of simple understanding. Although a future conditioned event is that which will never come to existence, because the condition on which it depends will never be fulfilled, the *scientia media*, as such, abstracts from the realization or non-realization of such a condition; hence, by the *scientia media*, God explores and knows, with infallible certainty, what the human free will will infallibly do by its own innate liberty (consent or dissent, do this act or that, etc.) if it be placed in such or such circumstances. God, if He wishes, e.g., Peter to consent, to do this act, etc., decrees to put Peter in these or those circumstances, and decrees conditionally to grant His help or concurrence for the particular action determined upon by Peter's free will (see below, 'simultaneous concurrence'). In this decree, which follows the foreknowledge of the future free act, Molinists say God knows the absolute future consent without prejudice to the free will; but the certitude of His knowledge is due, not to the intrinsic efficacy of the decree, but to the *scientia media*, which sees the consent before the decree.

The unanimity among Molinists is mainly negative, namely, that God does not know future free acts in any absolute, actual decree of His will; but, as regards the medium in which God sees a future free act, *quod homines, tot sententiae*.

(a) Molina and, after him, R. Bellarmine, M. Becanus, etc., teach that God knows the future free act in the super-comprehension of the free will; i.e., God's knowledge penetrates into the innermost recesses of the will and sees there what

it will infallibly do in such and such circumstances. This is the direct denial of free will, for the certain knowledge of an effect in its cause is the knowledge of a necessary effect. (b) Therefore Suarez taught that God knows the future free act in His decree foreseen as future. But it is impossible even to conceive of a future decree in God: the divine decrees are eternal, and are therefore neither past nor future. Unable to answer this, Suarez had recourse to another medium: (c) God knows future acts in their truth, which is either formal or objective. The reality of the future free act is the objective truth; the proposition expressing that reality is the formal truth. Some Molinists (G. Vasquez, M. Liberatori, H. Kilber, D. Palmieri, etc.) hold to the formal truth, asserting that of two contradictory propositions expressing a future contingent event one is determinately true, the other determinately false from all eternity, and this independently of God's will; but God knows all truth; therefore . . . This medium is rejected, not only by all Thomists, but by many Molinists, by Billot, G. Lahousse, etc. Others (F. Suarez, J. B. Franzelin, Mazzella, etc.) hold to the objective truth, since the truth of a proposition expressing the future depends on the objective truth of a future event. This medium is rejected by other Molinists—by Lahousse, who says that God sees future free acts, not in their truth, as such, but in their reality (*in ipsismet*). Billot, among others, refutes this. Others—J. Kleutgen, P. Carnoldi, T. de Régnon—failing to find a medium which does not involve absurdities, admit the *scientia media*, but acknowledge their ignorance as to its process of operation. Hence, the *scientia media*, invented to explain a difficulty, is the greatest difficulty of all.

(2) *God's causality and free will.*—God is the First Cause; therefore no being or mode of being can escape His causality. Thomists teach that in virtue of the divine decree the human will is physically, i.e. efficiently, predetermined by God to produce a free act. This divine influx precedes the action of the will by a priority of nature and causality, and applies the will to act (i.e., makes the will pass from the state of not acting to the state of acting), thus rendering the will *in actu primo* capable of freely determining itself *in actu secundo*. The free will infallibly consents to that to which it is premoved; i.e., the premotion is efficacious; yet the power to dissent remains with the will, for the premotion, divinely efficacious, effects that, although the will has the power to dissent, it infallibly consents and does not dissent. According to pure Molinism, the divine influx does not precede the action of the free will, but simultaneously co-operates with it, helping, as a partial cause, to produce the same action and the same effect. This divine action, called 'simultaneous concurrence,' is, therefore, not received into the will, but is rather alongside of it, and is received immediately into the action and effect of the will. In order to safeguard the universal causality of God, it is said that, although God and the free will are partial causes of the free act, nevertheless the effect is wholly produced by God as the First Cause, and wholly by the will as the secondary cause. The simultaneous concurrence is not efficacious, but is, of its very nature, indifferent, and is modified or determined by the free will, and hence can be used for volition or nolition, for this act or that act, indiscriminately, according to the determination of the free will. Other Molinists reject this simultaneous concurrence, and admit a kind of premotion, i.e. a physical influx received into the faculty of the will previous to the determination (action) of the will. By this influx the will is moved and determined to general or universal good,

but of itself the influx is indifferent and inefficacious for this or that particular good: without any further influx from God, the will determines itself to act, not to act, to do this, or to do that.

Thomists are accused of making God the cause of sin by the physical premotion which is efficacious, but the difficulty of sin has to be solved by Molinists also. Physical premotion effects, it is true, that the will cannot but infallibly do that to which it is premoved, but no Thomist allows that God predetermines to sin *qua* sin (see THOMISM): the simultaneous concurrence of the Molinists is a co-operation of God with the will, not indeed to produce the sinful action as sinful, but to produce the physical reality of the action. It is a lesser evil to co-operate than to make another commit a sin; Molinists have chosen a lesser evil, but have not solved the difficulty.

Against the two theories of Molinism with regard to the divine influx Thomists object that neither safeguards the universal causality of God. The self-determination of the will is not nothing; it is a reality, which, therefore, cannot escape God's causality. To argue, as does a recent Molinist (Lahousse, *Theol. Nat.*, Louvain, 1888, cap. 9, art. 3, no. 502), that there seems no reason why this quality (*i.e.* the determination of the will whereby it makes itself pass from the state of not willing to the state of willing) cannot be efficiently produced by a created being is not only to beg the question, but manifestly to deny, in very words, God's universal causality.

2. Supernatural order.—(1) *Grace and free will.*—Against Pelagians both Thomists and Molinists defend the necessity of grace for the production of a salutary act. Against Semi-Pelagianism both defend the necessity for the very beginnings of faith, and for the desire to do a salutary work. Both teach the absolute gratuity of actual grace, even for the very beginnings (*prima gratia vocans*) of justification. Against Calvin, Luther, and Jansen both teach that sufficient grace is given to all without exception, and that, under the influence of efficacious grace, the freedom of the will remains intact. The first point of difference between Thomism and Molinism concerns the nature of sufficient and efficacious grace, which both agree to be a division of actual grace. For the Thomist efficacious grace is entitatively, *i.e.* intrinsically (*ab intrinseco*), different from sufficient grace. Sufficient grace gives the proximate power of producing a salutary act; it raises the will to a supernatural level, and constitutes it *in actu primo* capable of performing a salutary act; but in order to produce that act *de facto* an efficacious grace (which is a physical premotion in the supernatural order) is necessary. Hence sufficient grace in Thomism gives the *posse*, efficacious grace the *agere* (see THOMISM). For the Molinist the same grace can be sufficient or efficacious; it remains sufficient if the will resists; it becomes efficacious if the will consents. Grace, therefore, is efficacious, not intrinsically or of its very nature, but extrinsically, by the consent of the will (*gratia efficax ab extrinseco*). In the natural order, as said above, the divine indifferent concurrence is not received into the will, nor does it precede the action of the will, but in the supernatural order it precedes (owing to which it is called *gratia preveniens*) the action of the will, and is received into it, thus elevating and making the will the principle *in actu primo* of the salutary act (this saves Molinism from Semi-Pelagianism). Preventing grace is a physical reality produced by God in the soul moving it (owing to which it is called *gratia excitans*) morally (not physically, *i.e.* efficiently) to consent; it co-operates (owing to which it is called *gratia co-operans*) with the will

to elicit a salutary act; but the consent does not follow infallibly, because this grace is not of its very nature, or intrinsically, efficacious (cf. Molina, *Concordia*, qu. 14, art. 13, disp. 41). According to this doctrine, one and the same grace can be merely sufficient for one individual and efficacious for another; further, a lesser grace can be efficacious for one person, while a greater grace can remain merely sufficient for another. Nevertheless, an efficacious grace is a greater boon than a grace merely sufficient. Thus, God from all eternity foresaw (by the *scientia media*) that, if He gave grace A to Peter, he would consent, but, if He gave grace B, Peter would not consent. When, therefore, God gives to Peter grace A, which He foresees will be efficacious, that grace is a greater gift than grace B, which He foresees would be merely sufficient (Molina, L. Lessius, Mazzella, H. Hurter, Palmieri, P. Tepe, etc.).

Bellarmino, Suarez, Vasquez, etc., modified this doctrine, and held what is called Congruism. In this form of Molinism sufficient grace is not indeed intrinsically different from efficacious grace, but differs only as regards the manner in which it affects the will. Efficacious grace (called *gratia congrua*) is that which is so accommodated to man's temperament and to the circumstances of time and place that the will infallibly, but freely, consents; sufficient grace (*gratia incongrua*) is that which is not so perfectly adapted to a man's character and to the circumstances of time and place, etc., and hence the will *de facto* resists. If, therefore, God wishes Peter to consent to grace, He decrees to give him congruous grace—*i.e.* a grace perfectly adapted to Peter's character—to put him in the most fitting circumstances, etc.

(2) *Predestination.*—According to the two theories of grace in the Molinist system, there are two theories of predestination: predestination due to foreseen merits (*post prævisa merita*) and gratuitous predestination (*ante prævisa merita*).

(a) *Predestination due to foreseen merits.*—God truly and sincerely wishes all to be saved (the salvific will of God); to all He gives sufficient grace. Foreseeing, by the *scientia media*, who will consent to grace and persevere in it, God predestines them to glory. In this opinion predestination to glory presupposes the good use of grace and is therefore not gratuitous (Lessius, Vasquez, Becanus, Franzelin, H. Tournely, etc.). As is evident, this theory entails all the insoluble difficulties of the *scientia media*. Moreover, all that man has he receives from God, according to St. Paul (Ro 11^{8st} 'Who hath first given to him, and it shall be recompensed unto him again? For of him, and through him, and unto him, are all things'; cf. 1 Co 4⁷ 'What hast thou that thou didst not receive? but if thou didst receive it, why dost thou glory, as if thou hadst not received it?'). Now Pelagians, Semi-Pelagians, and Molinists deny the gratuity of predestination, for no other reason than because they presuppose something on man's part which is the reason why God predestines some to glory and not others. The Pelagians presuppose good works, the Semi-Pelagians the beginning of good works, and Molinists the good use of grace. But, if all these things are from God, He cannot look for or await them in order to predestine some and not others; on the contrary, He gives even the good use of grace to some because he pre-elected them to glory. In accordance, then, with the teaching of St. Paul, with the doctrine of St. Augustine and St. Thomas, Thomists, and some Molinists of high repute, teach the absolute gratuity of predestination, *i.e.* irrespective of foreseen merits.

(b) *Gratuitous predestination.*—God wishes all to be saved; to all He gives sufficient grace. By a

special act of love and mercy He elects some to glory in preference to others, without any other reason than that of His own divine will. To the chosen He gives graces by which they will infallibly reach heaven (Suarez, Bellarmine, J. de Lugo, Billot, etc., and all Thomists, after St. Augustine and St. Thomas). On this point there is practically no difference between Thomists and this group of Molinists; the difference between them has reference to another question treated above, namely, the origin of the efficacy of grace. Some Congruists teach that God gratuitously elects certain ones, not to glory, but to congruous grace, to which they will infallibly consent, and in which they will persevere. Foreseeing this consent by the *scientia media*, God predestines them to glory. Against the latter opinion Thomists object, in particular, that God is made to act in a manner that implies the denial of an axiom received as true not only by all schools of philosophy but by common sense. In the order of actual realization the means must necessarily precede the end; but in the order of intention the end must precede the means, for it is impossible to choose and adapt means to an end without a preconception of the end. Now, since God must act as an intellectual being, He must (according to this axiom) first of all conceive the end, then choose the means for obtaining that end. But grace, good use of grace, merit, are the means, and glory is the end. Therefore He must first predestine to glory before He predestines to congruous grace. In the Congruist theory He does exactly the opposite. To this simple and irrefragable argument no Congruist has ever essayed a reply that is not suicidal. Molina also teaches the gratuity of predestination (*Concordia*, qu. 22, art. 4, 5, disp. I, membr. xi.), but his explanation is very different from that of the majority of those who follow him. In eternity God knows all possible universes, infinite in number; in each universe or order there is a series of free acts, all of which God knows by the *scientia media* independently of any act of His will. In each of these possible orders certain people are predestined, not, indeed, through the efficacy of a divine decree (which as yet has not intervened), but through grace made efficacious by the consent of the human will, in which the will perseveres unto the end. The omniscient God knows all this by the *scientia media*. By His own free will, without any regard whatsoever to foreseen merits, He gratuitously decrees to bring one of these orders to existence. The difference between Molina and Suarez on this point comes to this, that the former teaches predestination to glory before a prevision of absolute future merits, but after the prevision of conditioned future merits, whereas the latter teaches predestination to glory before prevision of future merits, whether absolute or conditioned. Molina explains his own theory in a manner more subtle and more profound than any of his followers. But, apart from the insuperable difficulty of the *scientia media*, there are difficulties in this explanation which absolutely destroy free will. We deny absolutely that a free act can be connected with any one order; it is the denial in very words of the freedom of the act. It is absolutely false that a free act is connected with any circumstances whatever, in the sense that, given the circumstances, a particular free act must follow. All those possible universes are contradictions, and have therefore no reality or conceivability; God, therefore, could not conceive them.

(3) *Reprobation*.—It is a defined doctrine of Catholic faith that no one is destined by God to eternal damnation except after a prevision of demerits; this is called 'positive reprobation.' In the theory of gratuitous predestination, by the

very fact that God gratuitously elects some and not others, those not chosen will infallibly not be saved; hence a reprobation of some sort is concomitant with the predestination of some to glory; this is called 'negative reprobation.' The difficulty is to conciliate negative reprobation with the universal salvific will of God. Suarez and his followers say it is a 'positive act of nolition to elect'; some Thomists (as J. B. Gonet, V. Contenson, etc.) that it is a 'direct exclusion from glory'; others (as A. Goudin, C. R. Billuart, etc.) that it is the 'omission of an effectual election' to heaven. It is, however, very difficult to safeguard the salvific will of God if negative reprobation be a positive act on God's part. Why not say, therefore, that it is the entire absence of any act of the divine will, whether of volition or nolition? It is the mere absence of the act of assumption.

ÆLRED WHITACRE.

MOMENTARY GODS.—'Momentary gods' (*Augenblicksgötter*) is an expression coined by H. Usener (*Götternamen*, Bonn, 1896, p. 279), and one whose credentials are open to question. It must certainly be admitted that the phenomena which Usener brings under the term are of very diverse kinds. It is true, of course, that human beings whose minds are dominated by fetishistic and animistic ideas may, under the influence of a momentary impression, ascribe to objects or occurrences a divine or dæmonic character; but the question is whether it is worth while to differentiate such procedure from the general mass of fetishistic and animistic phenomena by the use of a special term. Thus we frequently meet with the practice of worshipping the lance or other weapon (L. Deubner, *ARW* viii. [1905], Beiheft, p. 71), such being often invoked to witness an oath (*Æsch. Sept.* 529; schol. *Apoll. Rhod.* i. 57); but these facts in reality furnish reasons for doubting whether the weapon was only then deified, and suggest rather that it was thought of as permanently possessed of divine qualities. Thus, too, while Vergil makes Mezentius say: 'dextra mihi deus et telum quod missile libro,'¹ and is imitated in this artifice by later epic authors (Silii Ital. v. 118, vi. 137; Statius, *Theb.* iii. 615, ix. 548), such poetic fancies throw no light whatever upon primitive religious feeling. The lightning-flash smiting down upon

¹ *Æn.* x. 778.

the earth is regarded everywhere with a religious dread, and Greeks and Romans alike avoided all contact with the spot where it had struck, this being for the former a consecrated place (*ἁλίσσιον*, *ἐνὶ ἁλίσσιον*), and for the latter a *bidental*, which is explained by the phrase 'fulgur conditum'.¹ Thus the lightning-flash actually came to be regarded as a divine being: some of the Diadochi adopted the name Keraunos; in Seleucia Seleucus Nicator instituted a cult of the *κεραυνός* (Appian, *de Rebus Syr.* 58), the existence of which is attested by numerous coins; and there is an Orphic hymn dedicated to this deity. Keraunos is often represented as subordinate to Zeus, who in this capacity is called Keraunios, Kataibates, and Kappotas, just as Jupiter Fulgur is designated Fulgurator and Fulminator (Usener, *Kleine Schriften*, iv. Leipzig, 1913, p. 471). The natural phenomenon here involved is, of course, one of relatively rare occurrence, and but seldom arrests special attention by leaving visible traces of its action, but the worship of lightning, in its essential features, cannot be separated from that of winds and meteoric stones. Quite a different case, again, is presented by the worship of the last sheaf, or of the harvest-wreath (Gr. *ἐλπεύων*), and by other practices which have been explained by W. Mannhardt;² the harvest-wreath, which was wound round with white and red woollen threads, and for the year remained hanging at the door as an amulet for the house, is unmistakably a fetish, i.e. a sacred object fashioned and consecrated by human beings (R. M. Meyer, *ARW* xi. [1908] 320); in the last sheaf, however, and things of similar formation, is concealed the corn-spirit which, according to animistic ideas, renews the life of the corn, but, while it is only at harvest-time that the spirit becomes in a manner manifest to sight, it is in reality always present, and is therefore not a 'momentary god' in the proper sense. Usener likewise adduces the conceptions of the *δαίμων* and the *genius* of the individual. It is very difficult to come to a definite conclusion regarding the ultimate origin of these conceptions; they have undoubtedly been influenced in part by ideas of the soul, and, in the case of the *δαίμων*, by the notion of 'possession' (J. Tambornino, *De antiquorum demonismo*, Giessen, 1909), while the snake-form of the *genius* seems to point in quite a different direction (W. F. Otto, in Pauly-Wissowa, vii. 1155 ff.). In any case, the present writer can see no rational grounds for bringing *δαίμων* and *genius* under the category of 'momentary gods'.

While, however, the conception of 'momentary gods' is thus in part a rather indeterminate one, and in part of limited significance, the introduction of the term 'special gods' (Germ. *Sondergötter*) has proved to be of real advantage. This term, too, we owe to Usener, who framed it on the suggestion of E. Lehmann in connexion with Varro's *di certi*; like the latter, the special gods are deities with a clearly defined sphere of action, and thus closely allied to the momentary gods. Usener has shown that in the development of religion—so far, at least, as Greece was concerned—they are anterior to the great deities, and this result might, no doubt, be very widely generalized. Unmistakable examples are found in Greek heroes like Euodos (G. Kaibel, *Epigrammata Graeca*, Berlin, 1873, no. 825), Myiagros (Paus. viii. xxvi. 7), Teichophylax (Hesych. s.v.), or Horophylax (*JHS* viii. [1887] 236), who never had more than a local significance and a narrow sphere of action. Other beings of this type were absorbed by the great Olympian (i.e. Homeric) deities; thus Kourotrophos (also in plur., *Ephem. Arch.*, 1899, p. 143) was originally an independent

deity who at length became a mere epithet of Ge, Artemis, Demeter, etc., and Zeus Erechtheus, Athene Hygieia, etc., are to be interpreted in the same way. We may even venture to say that the displacement of these special deities by the Olympians was one of the most important processes in the development of Greek religion within historical times.¹ Among the Romans such special deities are found more especially in the Indigitamenta (*q.v.*), in which every particular operation—e.g., in agriculture—was assigned a distinct tutelary spirit—Vervactor, Redarator, Imporcitor, Insitor, Obarator, Occator, Sarritor, Subruncinator, Messor, Convector, Conditor, Promitor. It is said, indeed, that even the *lupanaria*, *culinae*, and *carceres* had each their special deity (Tertull. *ad. Nat.* ii. 15).² From this, however, we derive but scanty information as to the earlier state of things which had been disturbed by the incursion of the Greek religion; even in Varro's lists of these gods we already find many names of extraneous origin, and we are quite unable to say what degree of importance attached to the individual deities.

Very valuable data are furnished by the accounts of the Lithuanian special gods, as critically discussed by Usener (*Göttermamen*, p. 79; cf. Deubner, *ARW* ix. [1906] 284; O. Schrader, *ERE* ii. 31 f.); here we find Austheia, the goddess of bees, Babilos, the honey-god, Budintia, the goddess who arouses from sleep, Kiauliukruke and Kremata, the swine-gods, Meletele, the goddess of the colour blue, Rangupatis, who causes the fermentation of beer, and Wejopatis, the lord of the wind. Kindred figures are found among the Letts.

As regards the existence of such special deities in other religions—with the exception, however, of the heathenism that was not wholly submerged by the Roman Catholic Church (see below)—our knowledge is at fault, partly from lack of materials and partly from lack of research. We may unhesitatingly take for granted, however, that, e.g., the pantheons of the Vedas and the Avesta³ correspond with that of Homer in presenting various types of deities, and that the place of the great gods who hold sway in these literary monuments was, among the people, i.e. in the living religion, taken by a multitude of less imposing beings, of whom, it is true, our knowledge is most imperfect. The Phœnician religion provides an instructive example; here it was not, strictly speaking, a single self-identical Baal to whom divine honours were paid; on the contrary, each several tribe and city had its own special Baal, and worshipped him as a tribal or tutelary deity. The data which lie most readily to hand are found in countries where residual elements of heathen views still co-exist with or underlie the Roman Catholic religion in the practice of saint-worship, and have to some extent been countenanced by the Church (D. H. Kerler, *Die Patronate der Heiligen*, Ulm, 1905). Thus, e.g., among the Zamaïtes of Prussia, St. Agatha took care of the household fire and St. Nicholas was the guardian of boatmen, St. Apollonia cured toothache and St. Laurentius rheumatic pains, St. Crispin was the patron of shoemakers and St. Goar of potters.⁴ In the Vosges St. Abdon is believed to drive away fleas, St. Catherine to secure husbands for maidens, St. Sabina to

¹ Cf., however, the criticism by L. R. Farnell, 'The Place of the "Sonder-Götter" in Greek Polytheism,' in *Anthropological Essays presented to . . . Tylor*, Oxford, 1907, pp. 81-100.

² The necessary corrections of Usener's statements in this connexion will be found in G. Wissowa, *Gesammelte Abhandlungen zur rom. Rel.- und Stadtgesch.*, Munich, 1904, p. 304, and W. F. Otto, *Rhesn. Mus.* lxxv. [1909] 449, 468.

³ On Iranian 'special gods' cf. the remarks of J. H. Moulton, *Early Zoroastrianism*, London, 1913, pp. 69-71, 105, 150. A notable instance is Verethraghna, 'Victory.'

⁴ On the saints who exercised an official function Deubner, *De Incubatione*, Leipzig, 1900, is well worth consulting.

¹ Amm. Marcell. xxiii. 5.18: 'hoc modo [i.e. fulmine] contacta loca nec intueri nec calcari debere fulgurales pronuntiant libri.'

² Antike Wald- und Feldkulte, Berlin, 1877.

allay the pangs of love, and so on. A number of these tutelary offices of saints are universally recognized by the Roman Catholic Church, and are entered in the *Diario Romano*, in which we are told, for instance, that St. Blasius cures sore throat and St. Liberius pains due to calculus, and that St. Martha protects from epidemics. Almost every district has its own particular patron saint, and in many cases clings to him with marked tenacity.

LITERATURE.—This has been sufficiently indicated in the article
W. KROLL.

MONADISM.—See LEIBNIZ.

MONARCHIANISM.—Monarchianism is a term generally used to designate the views of those heretics who, to safeguard the Divine unity (*monarchia*), so refined away the distinction of the Divine Persons as to destroy the Trinity. Hippolytus has left us a summary account of their origin. A certain Noetus, so he tells us, was the protagonist of these ideas; they were upheld by his disciple, Epigonus, and further propagated by the latter's disciple, Cleomenes.¹ From Epiphanius we gather that Noetus must have died shortly before A.D. 250.² But Hippolytus, who appears to have been martyred about A.D. 240, and who composed his *Philosophumena* between the years 230 and 235,³ says in his *Tractate against Noetus*, i., that he 'died not very long since.'⁴ And this seems more probable; for Cleomenes, the disciple of Noetus's disciple Epigonus, according to the *Philosophumena*,⁵ caused much trouble during the pontificates of Zephyrinus and Callistus, viz. 198–222.⁶

Hippolytus endeavours to show that Noetus's views were in reality only those of the philosopher Heraclitus the Obscure, who held that 'the Father is an unbegotten creature who is creator.'⁷

Noetus and his disciples hold, says Hippolytus, these Heraclitean tenets, for they say 'that one and the same God is the Creator and Father of all things; and that when it pleased Him, He appeared.'⁸ And again: 'When the Father had not been born, He [yet] was justly styled Father; and when it pleased Him to undergo generation, having been begotten, He Himself became His own Son, not another.'⁹ 'In this manner,' adds Hippolytus, 'he thinks to establish the sovereignty [of God], alleging that Father and Son, [so] called, are one and the same [substance], not one individual produced from a different one, but Himself from Himself; and that He is styled by name Father and Son, according to vicissitude of times.'¹⁰

Hippolytus, as we have seen, says that Noetus set forth his views as a means of upholding the Divine sovereignty, but, as a fact, the term *monarchia* (*μοναρχία*) was ambiguous and could be used as the watchword of both parties. Thus Eusebius tells us¹¹ that St. Irenaeus wrote a work, *de Monarchia*, against those who held that God was the author of evil. Similarly Justin Martyr has left a treatise, *de Monarchia*, to prove that God is the sole governor against paganism;¹² see also Athenagoras, *Legatio* viii.¹³ But, as was only natural, the Apologists previous to the Council of Nicæa were faced with the grave difficulty that, while combating polytheism, they had to maintain the divinity of Christ without impairing the Divine unity. And

¹ Phil. ix. 2. ² Hæc. lvi. 1 (PG xli. 994 t.).

⁵ ix. ii. vi. f.

⁶ Zephyrinus was pope, A.D. 198–217; Callistus reigned only five years, 217–222; cf. HE v. xxviii. 8 and vi. xxi. 1, with McGiffert's notes.

⁷ Phil. ix. 4.

⁸ Ib. ix. 5.

⁹ Ib.

¹⁰ HE v. xx. 1.

¹¹ I Epl. Θεοῦ Μοναρχίας, tr. in *Ante-Nicene Fathers*, ii. [1892] 829 ff. (PG vi. 311), but probably not the work referred to by Eusebius, HE iv. xvii. 4., and note Orgen, *Com. in Ep. ad Titum* (PG xv. 1304): 'philarchia morbo languentes dogmata statuerunt.'

¹² Athenagoras, Περὶ σεβείας (PG vi. 903; *Ante-Nicene Fathers*, ii. 375 ff.).

it must be acknowledged that, in insisting upon the divinity of Christ, they often, through lack of precision in their choice of terms, laid themselves open to the charge of ditheism. Thus Hippolytus says that Callistus reproached the opponents of Noetianism with being ditheists;¹ and Pope Dionysius felt himself compelled to point out that in opposing Sabellius many 'divide and cut to pieces and destroy that most sacred doctrine of the Church of God, the Divine monarchy, making it as it were three powers and partitive subsistences and god-heads three.'² An example of this unintentional vagueness may be found in Justin, *Dial.* cxxix., and, what is even more remarkable, in those who most strenuously resisted the Noetians and their successors, the Sabellians. Thus Novatian, while insisting on the divinity of Christ and urging the precision with which Christ Himself says 'I and the Father are one' (ἐγώ, 'one,' that is, in the neuter, and consequently not in person, but in substance or nature), yet offers no explanation of how this can be. The retort was obvious: Then you hold that there are *two* Gods!³ Even Tertullian, in spite of his lawyer-like precision of terms and his undoubted orthodoxy on this point—even in his Montanist days—has some most misleading expressions which the post-Nicene writers would have avoided at all costs.⁴ Yet these things are inevitable, and it is by such discussions, with occasional lapses from exactitude on either side, that the Church can come to a full knowledge of the deposit of truth.⁵

A remarkable exception to this prevailing vagueness is furnished by Athenagoras, who, in his *Legatio*, says:

'The Son of God is the Logos of the Father, in idea and in operation; for after the pattern of Him and by Him were all things made, the Father and the Son being one. And, the Son being in the Father and the Father in the Son, in oneness and power of spirit, the understanding and reason (νοῦς καὶ λόγος) of the Father is the Son of God. But if, in your surpassing intelligence, it occurs to you to inquire what is meant by the Son, I will state briefly that He is the first product of the Father, not as having been brought into existence (for from the beginning, God, who is the eternal mind [νοῦς], had the Logos in Himself, being from eternity instinct with Logos [λογικός]); but inasmuch as He came forth to be the idea and energizing power of all material things.'⁶

Nor is it surprising that these so-called Monarchians should have had a strong following. God is One. For this monotheism the prophets had fought and prevailed. But, if God is One, then, though there may be diversity of actions *ad extra*,

¹ Phil. ix. 7. Much capital has been made out of Hippolytus's violent attacks on the orthodoxy, and, indeed, on the personal character, of Popes Zephyrinus and Callistus. But Hippolytus himself says (Phil. ix. 7) that Callistus excommunicated Sabellius, though he maintains that Callistus did so out of fear of himself, Hippolytus. Perhaps the best commentary on Hippolytus's diatribes is furnished by the absolute silence of all other writers of the period.

² Quoted by Athanasius, *Epistle in Defence of the Nicene Definition*, 26 (PG xxv. 463); J. H. Newman, *Athenagoras*, Oxford Library of the Fathers, 1842–44, i. 45; also *Ante-Nicene Fathers*, xviii. [1895], 'Tertullian,' iii. 385–387, a fragment of an epistle or treatise of Dionysius, bishop of Rome, against the Sabellians; cf. also Dionysius of Alexandria, *adv. Sabellium*, given in Eusebius, *Præp. Evang.* viii. 19 (PG x. 1370); Mansi, *Concilia*, i. col. 1011.

³ Novatian, *de Trinitate*, xi–xviii., xxvii.

⁴ Thus in *adv. Prax.* iii. (PL ii. 158) he speaks of the angels as being 'members of the Father's own substance,' and in iv. (ib. 159) of the *monarchia* as 'committed' by the Father to the Son.

⁵ Cf. St. Augustine's remark apropos of the re-baptism controversy: 'Quomodo enim potuit ista res tantis alleracionum nebulis involuta, ad plenam concilii luculentam illustrationem confirmationemque perducī, nisi primo diutius per orbis terrarum regiones multis hinc atque hinc disputationibus et collationibus episcoporum pertractata constaret? Hoc autem facit sanitas pacis, ut, cum diutius aliquis obscuriora quaruntur et, propter invenienti difficultatem, diversas pariant in fraterna disceptatione sententias, donec ad verum liquidum perveniat, vinoulum permanens unitatis, ne in parte præcisâ remaneat insanabile vulnus erroris' (*de Baptismo et Donatistas*, ii. 6) [PL xlii. 129]; the whole passage is worth reading in this connection.

⁶ Athenagoras, Περὶ σεβείας, x. (PG vii. 907; *Ante-Nicene Fathers*, ii. 385); cf. xxiv. (PG vii. 946).

there can be no such diversity of action *ad intra* as shall imply distinction of Persons. But Christ is God, and Christ suffered upon the Cross. Therefore the Father suffered!¹ The conclusion seemed compelling; but the Noetians and Sabellians shrank from it and endeavoured to explain that this suffering of the Father was in some sense not really His.² Theirs was a strong position. They seemed to be the advocates of orthodoxy against the orthodox themselves. It was in vain that the latter rejoined: Then, according to your argument, it is the Father who sits at His own right hand! For, while the NT as a whole clearly taught the divinity of the Son and the distinction of Persons, yet there were certain texts which, while maintaining the former, seemed expressly to deny the latter. Thus Praxeas insisted on 'I and the Father are one' (Jn 10³⁰); this it was easy to explain in a monotheistic sense, as Tertullian does.³ But it was not so easy to explain 'He that hath seen me hath seen the Father; and I am in the Father, and the Father in me' (Jn 14⁹). Tertullian treats this passage at considerable length,⁴ but it can hardly be said that his answer precludes the retort: Then there are two Gods!

It is only when we turn to such an analysis of these passages as is furnished by Athanasius (e.g., on Jn 14⁹, in *Orat.* iii. 23) and Augustine (*Tract.* xix. 13, xxi. 4, xxii. 14) that we realize the distinction between ante- and post-Nicene clearness of expression when handling the questions ventilated by the Noetians and their successors. St. Phœbadus († c. A.D. 393) puts the dilemma clearly:

'If we speak of one God in the singular, excluding the word "Second Person," we thereby approve that mad heresy which says that the Father Himself suffered. If, on the other hand, we admit of number combined with division, then we join hands with the Arians who hold that God was made from God, and who say that He fashioned a new substance out of nothing. We must, then, hold to the rule which confesses that the Father is in the Son and the Son in the Father, to the rule which while preserving the oneness of substance acknowledges an economy (*dispositionem*) in the Divinity.'⁵

Both sides, then, claimed to be the sole upholders of a true conception of the Divine monarchy:

'Marcellus and Photinus,' says Athanasius, 'negative Christ's existence before ages, and His Godhead and unending Kingdom, upon pretence of supporting the divine monarchy.'⁶ Tertullian states the case in his usual pithy manner:

'We, say they, maintain the monarchy. . . . Yes, but while the Latins take pains to pronounce *monarchia*, the Greeks refuse to understand *oconomia*. . . . for, extolling the *monarchia* at the expense of the *oconomia*, they contend for the identity of Father, Son, and Spirit.'⁷

And then he puts his finger on the real difficulty which the Noetians had to face:

'Praxeas put to flight the Paraclete, and he crucified the Father!'⁸

Hence the opprobrious nickname for the so-called Monarchians—Patripassians,⁹ i.e. 'those who made

¹ Tert. *adv. Prax.* xxix. (PL II. 194).

² Philos. ix. 5; cf. x. 28.

³ *Adv. Prax.* xxii. (PL II. 183).

⁴ *Id.* xxiv.; cf. Novat. *de Trin.* xxviii. (PL III. 940-942).

⁵ *Liber c. Arianos*, xxii. (*PL* xx. 291.); cf. also Zaccchæus, *Consultationes*, II. 15 (ib. 1185).

⁶ Athanasius, *De Synodis*, 26 (vi.) (PG xxvi. 731); Newman, *Athanasius*, I. 114.

⁷ *Adv. Prax.* iii. (PL II. 153), and ix. (ib. 164). Tertullian's use of the term *oconomia* is unusual. In the NT it generally refers to the ministry of the Word of God (e.g., 1 Co 9¹⁷); also to the divine counsel as fulfilled in the Incarnation (Eph 1¹⁰). And thus it is used by the Greek Fathers of the mystery of the Incarnation (cf. J. O. Suicer, *Theol. eccles.*, Amsterdam, 1728, s.v.). But here Tertullian uses it of the relationship of the Three Persons of the Trinity, a usage of which Suicer takes no notice.

⁸ *Id.* I. (PL II. 156). Of Praxeas himself very little is known. Hippolytus apparently knows nothing of him, though, if we are to argue from his silence, we could equally well argue from Tertullian's silence regarding Noetus, Cleomenes, and Sabellius. For some of the views which have been held regarding his identity see DCS, s.v. 'Praxeas.'

⁹ Cf. Augustine, *Tract.* xxxvi. 8, in *Joan.*; cf. xxxvii. 6, lxx. 2, lxxi. 2 (PL xxxv. 1907, 1872, 1819, 1820); and Origen, *Com. in Ep. ad Titum* (PG xiv. 1804).

the Father suffer' in the person of the Son. Methodius († c. 312), commenting on Rev 12¹⁻⁶, likens those who have gone astray with regard to one of the Three Persons in the Trinity to the third part of the stars that fell:

'As when they say, like Sabellius, that the Almighty Person of the Father Himself suffered.'¹

It is of interest to note how these heresies shaded off into one another. Thus Sabellius apparently denied that he was a Patripassian; but, in order to do so, he seems to have held that our Lord came into being only on His human birth.² The Arians, on the contrary, said 'before the ages,' thus agreeing, so it would seem, with the Patripassians. Again we note that, whereas Sabellius claimed to rank as a Monarchian, yet the Arian bishops, writing to Alexander, say:

'We do not do as did Sabellius who, dividing the One, speaks of a Son-Father.'³

Thus their ground of complaint against Sabellius was precisely that on which he plumed himself on not doing, viz. separating the Divine *monarchia*. Similarly Athanasius says:

'Sabellius supposed the Son to have no real subsistence, and the Holy Spirit to be non-existent; he charged his opponents with dividing the Godhead.'⁴ And once more: 'Sabellius, dreading the division invented by Arius, fell into the error which destroys the Personal distinctions.'⁵

It must, however, be remembered that no one can at this date say what precisely were Sabellius's opinions, partly because of the inevitable fluctuations through which he passed, partly, and chiefly, because history is apt to confuse him with his disciples, as in the passage last quoted from Athanasius.⁶

How grievous were the ravages worked by these Monarchian views can be seen by the frequent condemnations of them in the shape of Sabellianism. Thus Pope Damasus condemned them in the Council held at Rome in 380 (or [?] 382):

'We anathematize those also who follow the error of Sabellius in saying that the Father is the same as the Son.'⁷

Similarly, in the ecumenical Council of Constantinople (A.D. 381) the first canon is directed against various shades of Arianism, and finally against the Sabellians, Marcellians, Photinians, and Apollinarists.⁸ By the time of the provincial Council of Braga (561) we see how these Monarchian principles have verged into Priscillianism and are tainted with Manicheism.⁹ The same comprehensive condemnation was repeated in the Lateran Council of 649 (can. xviii.).¹⁰ Lastly, Eugenius IV. found it necessary to remind the Jacobites, in his decree dated 4th Feb. 1441, that the Church 'condemns Sabellius for confusing the Persons and for thus altogether doing away with the real distinction between them.'¹¹

The subsequent ramifications of the Monarchian tenets do not concern us here. Suffice it to say that they spread very widely, though in forms which varied considerably from those originally set forth. Thus Eusebius mentions that Beryllus, bishop of Bostra, 'deserted the ecclesiastical standard,' i.e. the Rule of Faith, and asserted that Christ did not pre-exist in a distinct form of His own, neither did He possess a divinity of His own, but only that of the Father dwelling in Him.¹² This is clearly a derived form of Monarchianism. The most prominent, perhaps, among the later

Monarchians were the Priscillianists. They are of interest by reason of the strange influence which they had on the Latin text of the Gospels¹—e.g., indirectly on 1 Jn 5⁷. To them are due the Monarchian *Prologues* which have attracted so much attention in later years.²

It is usual to embrace under the heading Monarchianism the so-called Adoptianist heresies. But, while it is true that the Adoptianists may be regarded as the legitimate outcome of the Monarchians, yet they approach the question from an entirely different standpoint. For Adoptianism is a Christological heresy, whereas Monarchianism, at least in its original form as Patripassianism, concerns the Father rather than the Son. To embrace the two heresies under one heading is to obscure the issue. See art. ADOPTIANISM.

Tixeront, *Histoire des dogmes*², i. Paris, 1905, ch. viii.

HUGH POPE.

MONASTICISM.—I. ETYMOLOGY; DEFINITION.—The word 'monasticism' is derived from the Gr. word *μόνος*, 'alone,' 'solitary,' from which a whole family of words has been formed: *μονή* and *μοναστήριον*, 'monastery'; *μοναχός*, 'monk' or 'solitary'; *μονάζειν*, 'to lead the solitary life'; *μονάζοντες*, 'solitaries'; *μονάστρια*, 'nun'; *μοναδικός*, *μοναχικός*, *μοναστικός*, *μονήρης*, 'monastic'; *μονάζουσα*, *μοναχούσα*, *μοναχή*, 'nun'; *τὸ μοναχικόν*, 'monasticism'; *μοναστικῶς*, 'monastically'; *μοναχισμός*, 'monachism.'³

In Latin this word has given *monachus* and its derivatives, *monacha*, *monachatus*, *monachare*, *monachizare*, *monachismus*, *monachatio*, *monasterium*, and a few other words.⁴

'Interpretare vocabulum monachi, hoc est nomen tuum: quid facis in turba qui solus es?' (Jerome, *Ep.* xiv. [PL xxii. 850]). 'Sin autem cupis esse quod diceris, monachus, id est solus, quid facis in uribus, quae utique non sunt solorum habitacula sed multorum?' (*Ep.* lx. [PL xxii. 583]).

All these words, derived as they are from the same root, indicate the idea of solitude, of isolation. This solitude must not, however, be interpreted as implying absolute isolation—such as that of the hermit in the desert. As we shall see, the term 'monk' has come to be applied to men living the same life in common—a life in which they are indeed separated from the world, but not from one another.

In common usage the word 'monasticism' is often incorrectly extended to embrace the idea of the religious state in general, comprising even those religious orders which cannot be regarded as belonging to this category—such, e.g., as the Dominicans and Franciscans, the Jesuits and other clerks regular. Strictly speaking, the term should be reserved for the form of religious life led by those who, having separated themselves entirely from the world, live in solitude—as, in fact, the etymology of the words 'monk,' 'monastery,' etc., clearly indicates. We shall see below (§ III.) in what the special characteristics of the monk properly so called consist, the special conditions of the monastic life, and its various types. The monks,

¹ Thus note canon xvii. of the Council of Braga (A.D. 561): 'If any one reads the Scriptures which Priscillian corrupted in accordance with his own erroneous views . . . let him be anathema' (Mansi, ix. 774).

² John Chapman, *Notes on the Early History of the Vulgate Gospels*, Oxford, 1908, chs. xii.–xv.

³ J. O. Snider, *Theatrum ecclesiasticum*, Amsterdam, 1728, s.v.; E. A. Sophocles, *Greek Lexicon of the Roman and Byzantine Periods*, Boston, 1870, s.v.

⁴ C. du F. du Cange, *Glossarium*, ed. L. Favre, 10 vols., Niort, 1885–87, s.v.

in fact, form a class apart among what are known as the 'religious orders'; they must be distinguished from those that are commonly termed the 'mendicant orders' or 'friars'—e.g., Dominicans, Franciscans, or Carmelites—from the clerks regular, such as the Jesuits, and from other forms of the religious life and religious congregations—e.g., the Redemptorists, Oratorians, Sulpicians, etc. (see art. RELIGIOUS ORDERS).

At the present day monks are represented in the Catholic Church by the Basilians and other monks of the East; by the Benedictines, Cistercians, Camaldolese, Olivetans, Carthusians, and other religious families of less importance. They must be distinguished from the ascetics who existed in the early ages of the Church, and who were simply Christians living a more austere life in the world. Nevertheless, after the monastic life properly so called had been instituted, many of these ascetics of both sexes entered the monasteries; hence we find the name 'ascetic' applied sometimes to the monks also (see, e.g., the *Peregrinatio Etheriae*; cf. art. ASCETICISM, vol. ii. p. 63f.). The canons regular and the military orders should also be distinguished from the monks, although there were many points of contact between them. We are not, however, concerned with them here.

II. MONASTICISM OUTSIDE OF CHRISTIANITY.—Monasticism cannot be regarded as an institution belonging exclusively to Christianity, although it is chiefly in that religion that its full development is to be sought. Examples occur in the non-Christian religions as well, and we shall see in what relation these stand to Christian monasticism.

1. Worship of Sarapis.—In recent years it has become the fashion to see in the *κάρωχοι*—pagan recluses who lived in the temples of Sarapis and their dependencies—the authentic ancestors of the Christian monks. Weingarten, to whom this theory owes its origin, has even maintained that St. Pachomius, the founder of Christian cenobitism, not only drew a large part of his Rule from the usages of these *κάρωχοι*, but had been himself a *κάρωχος* of Sarapis, before his conversion to Christianity, at the Sarapeum of Chenoboscium. This theory, however, rests on a series of unverified hypotheses. Pachomius was never a *κάρωχος*. All that can be gathered from the most ancient life of this saint is that he withdrew to an abandoned temple of Sarapis, and that, while there, he had a vision of God—not, however, of the pagan divinity, but of the God of the Christians. Moreover, the analogies that have been drawn between these *hierodouloi* and the cenobites of Christianity are only apparent.¹

2. Neo-Platonism.—The Alexandrian school of philosophy in the 2nd and 3rd centuries taught a kind of mysticism, more philosophical than religious, in which moral ideas and ascetic practices occupied an important place. The attempt has been made to find in this mystic philosophy the source of Christian asceticism. The latter, however, was in existence before this date, and under a very different form. Moreover, it seems difficult to avoid the conclusion that the Alexandrian philo-

¹ With regard to this question of *κάρωχοι* and cenobites cf. H. Weingarten, 'Der Ursprung des Mönchtums im nachkonstantinischen Zeitalter,' in *ZKGL* [1877] 1 ff.; E. Preuschen, *Mönchtum und Sarapis-kult: eine religionsgeschichtliche Abhandlung*, Giessen, 1903; E. Revillout, 'Le Reclus du Sérapéum, sa bibliothèque et ses occupations mystiques,' in *REy* i. [1880] 180, also *Rapport sur une mission en Italie*, Paris, 1878, p. 88; P. Ladeuze, *Étude sur le cénobitisme pachomien*, Louvain, 1898, p. 37; J. Mayer, *Die christliche Ascese*, Freiburg, 1894, p. 87; Brunet de Presle [O. M. Wladimir], 'Mémoire sur le Sérapéum,' in *Mémoires présentés par divers savants*, i. ii. [1852] 576; A. Bouché-Leclercq, 'Les Reclus du Sérapéum de Memphis,' in *Mélanges Perrot: Recueil de mémoires concernant l'archéologie classique, la littérature et l'histoire anciennes*, Paris, 1903, p. 211; A. Busch, *De Sarapide et Iside in Graecia cultis*, Berlin, 1907; Leclercq, art. 'Cénobitisme,' *DACL* ii. 2 8053–8056.

sophy, far from influencing Christianity, was itself deeply imbued with Christian ideas (cf. ASCETICISM, vol. ii. p. 65¹).

3. **Druidical communities.**—It will be enough to mention the theory of Alexandre Bertrand, who saw in the druids the ancestors of the Christian cenobites. This theory, which regards the monks not only as the imitators, but as even the legitimate descendants of the communities and brotherhoods of the old Celtic religion, has no solid foundation, and has been unanimously rejected by specialists; hence we need not discuss it in detail.²

4. **Orphic communities.**—Orphism, which had so much in common with Pythagoreanism, had, like it, a certain resemblance to Platonism and Neo-Platonism; it counselled practices of asceticism, some of which resemble those of Christianity. It imposed on the 'pure' and the 'holy' a rigorous system of penances and privations, among which were the practice of vegetarianism and numerous purifications. Although our information regarding these *thiasoi*, or Orphic societies, is not very extensive, we know that they were not only spread throughout Greece, but were also found in Italy, Africa, Gaul, and the whole of the Western world. Lactantius alludes to these confraternities (*de Div. Instit.* i. 22 [PL vi. 242 f.]). There were rites of initiation, mysteries, prayers, hymns, and unbloody sacrifices, which were celebrated during the night. But the doctrines and mysteries of Orphism have a very special character of their own and very little in common with those of the Christian religion.³

5. **Buddhist asceticism.**—Both Buddhism and Brahmanism possess institutions that have certain characteristics analogous to those of Christian monasticism. In the sacred books of the Hindus mention is made of hermits forming colonies and dedicating their lives to the study of the Vedas and to the contemplation of Brahman. They are vegetarians, and practise mortification in all its forms. While in Brahmanism the monastic life has preserved its eremitic character, in Buddhism we find it, on the contrary, in the cenobitic form. The monks live together in monasteries, in the practice of poverty—as mendicants, in fact—and celibacy. Such monasteries are still to be found in Japan, Korea, China, India, and Ceylon.

The lamaseries of Tibet are the most curious examples of this form of monasticism. The monastic capital of Tibet (*q.v.*) is Lhāsa, and of the 30,000 inhabitants of this city 10,000 are monks, who are divided among 2500 monasteries. In the provinces of China there are also monasteries of this kind, some of which contain from 300 to 400 bonzes. They have the head shaven, and spend their time reciting prayers and performing ceremonies before the statue of Buddha. Many of them condemn themselves to a life of absolute silence, others to complete immobility.

The *faqirs* of India offer another variety of the life of mortification and renunciation. A. Hilgenfeld and other writers have tried to establish the influence of these institutions on Christian monasticism. But it is easy to show, with the advance of scholarship, that it is the contrary that is true, and

that certain practices of Buddhist monasticism owe their inspiration to Christian influence.¹

6. **Monasticism among Jews and Muhammadans.**—(a) *Essenes.*—The Essenes (*q.v.*) may be regarded as one of the most striking examples of the monastic life outside of Christianity. Whether they be looked on as a sect, as a tribe, or as a religious community, the Essenes (150 B.C.) offer all the principal characteristics of the cenobitic life—community of goods, practice of poverty and mortification, prayer, and work, meals and religious exercises in common, silence, celibacy, etc. Although there is no direct relationship between them, it is nevertheless true that both Essenian and Christian asceticism derived much of their practice from the same source, viz. the Jewish religion.

(b) *Therapeutæ.*—The Therapeutæ (*q.v.*), whose very existence has been disputed, are described by Philo (*de Vita Contemplativa*) as cenobites, leading a life almost identical with that of the Christian cenobites. This description bears so striking a resemblance to the life led by Christian monks that more than one writer has been led to deny its authenticity as a work of Philo and to uphold the opinion that it is a Christian compilation undertaken with the view of providing a venerable ancestry for the Christian cenobites. Renunciation of the world, prayer, life in common in real monasteries, vigils, chants carried out by alternate choirs, the practice of fasting and other mortification—such are the chief characteristics of the life of the Therapeutæ. Nevertheless, they do not seem to have exercised any direct influence on Christian monasticism.²

(c) *Nazirites.*—The Nazirites (*q.v.*) were men who lived an austere life, abstained from wine and all fermented liquors, never cut their hair, avoided scrupulously all legal impurities, and took a vow to consecrate their lives to God. They had certain practices in common with the monks, although their ideal was not the same. Regarding such resemblances we may point out that, as in the case of the Essenes, since Christianity itself had its ancestor in Judaism, it is not astonishing that there should be certain resemblances between their respective institutions on many points.³

(d) *Rechabites.*—Some (cf. T. K. Cheyne, *EBi* iv. [1903] 4019) regard the Rechabites as forming 'a sort of religious order, analogous to the Nazirites,' and St. Jerome himself saw in them the precursors of the monks (*Ep.* lviii., 'ad Paulin.,' 5 [PL xxii. 583]). But such analogies should not be pressed too far. The Rechabites were distinguished by certain special observances, such as abstinence from wine, the prohibition against building houses, and the obligation to live in tents, but it is difficult to see in them anything more than a tribe of Bedawi such as still exist in these days and observe the customs of their ancestors with such zeal.⁴

(e) *Muhammadans.*—Muhammadanism has given birth to several 'religious orders,' the chief of which are the Qādirī, the Maulavī, the Baqtāshī, the Rūfā'ī, etc. The monks are called Dervishes ('poor'); they live together, 20, 30, or 40 at a time,

¹ T. Keim derives Christian asceticism from this source (*Aus dem Urchristenthum*, Zurich, 1878, p. 204 f.). Against this theory cf. D. Völter, *Der Ursprung des Monachthums*, Freiburg, 1900, p. 89, and G. Grutzmacher, 'Monchthum,' in *PRE³* xiii. 217.

² A. Bertrand, *Nos Origines*, iv. *La Religion des Gaulois: Les Druides et la druidisme*, Paris, 1897, pp. 417–424, appendix J, 'Les grandes Abbayes chrétiennes d'Irlande, d'Ecosse, et du Pays de Galles, héritières des communautés druidiques de ces contrées'; cf. G. Boissier, in *Journal des Savants*, 1898, pp. 578–680; G. Dottin, 'La Religion des Gaulois,' in *RHR* xxxvii. [1898] 151 f.

³ Cf. E. Zeller, *Die Philosophie der Griechen*, Tübingen, 1844–62, i. 88; L. F. A. Maury, *Hist. des religions de la Grèce antique*, Paris, 1857–59, iii. 800; O. Gruppe, *Die griech. Culte und Mythen*, Leipzig, 1887; E. W. T. Maass, *Orpheus*, Munich, 1896.

² On the Therapeutæ and the question of the authenticity of the famous treatise of Philo, cf. Leclercq, in *DACL* n. 2 8068. Since the works of H. Massébeau and F. C. Conybeare on the subject, the authenticity of the treatise would seem to be solidly established.

³ Cf. G. Less, *De Nazireatu*, Göttingen, 1789; J. B. Withmüller, *Die Nazirer*, Batisbon, 1864; B. Duhm, *Die Götterwesen in der alttestamentl. Religion*, Tübingen, 1905.

⁴ Cf. A. Calmet, 'Dissertation sur des Rechabites,' in *Commentaire littéral (Jérémie)*, Paris, 1724–26, pp. xlii–lii; *HDB* iv. 203.

in a monastery under a head (*shaiikh*). The Der-vishes wear a long robe of coarse stuff. Reception into their order is preceded by a time of probation, which lasts sometimes 1001 days. As regards their religious practices, these Muhammadan monks have prayers, sacred dances, and sometimes penances, such as the privation of sleep, immobility (ensured by fetters on the feet), fasting, and solitude (see art. DERVISH). Many of them are also mendicants. Some of the orders claim to go back to the time of the Prophet himself, although he had said 'In Islām there are no monks,' and although no mention of the monastic life is to be found in the Qur'an. Even during the lifetime of Muhammad, however, the Sūfis gave themselves up to certain practices of monasticism and lived together in community (see art. SŪFISM). Abū Bakr and 'Alī, contemporaries of the Prophet, formed, with his approval, communities of the same kind. Other orders were founded on the same model in Egypt, Arabia, Persia, and Turkey. There were no fewer than 27 monasteries in the island of Crete alone. One of the most celebrated of Muhammadan monasteries, that of Konia in Asia Minor, possessed 500 cells.¹

III. CHRISTIAN MONASTICISM.—Is Christian monasticism derived from one or other of these sources, or is it an original institution? This is a question that has often been discussed. On account of certain undeniable resemblances between Christian monasticism and the various forms just described, some writers have not hesitated to regard the one as the child of the other. But in this case, as in that of the history of all institutions, however striking such resemblances may appear at first sight, they are not sufficient of themselves to establish a relationship. This is a principle now accepted by all serious students of history. To prove relationship between the institutions of Christianity and those of other religions, it is necessary to produce facts clearly demonstrating that one institution has been derived from the other. This, however, still remains to be done. We shall therefore regard Christian monasticism as a plant that has grown up on Christian soil, nourished exclusively on the principles of Christianity. This seems, for the moment at least, to be the only theory that can safely be maintained.²

I. PRINCIPAL CHARACTERISTICS.—Christian monasticism possesses certain characteristics all of which are not equally essential, but which, nevertheless, when taken together, are necessary to constitute a monk.

1. Poverty, chastity, humility, and obedience.—The first monks, after the example of the Christian ascetics, practised poverty, chastity, and humility—virtues which, along with obedience, soon came to be regarded as essential to the monastic life. In order to carry out the evangelical counsels and to imitate the life led by Christ Himself and, after Him, by the apostles and first disciples, it was necessary to give oneself up to these virtues:

'Beati pauperes spiritu' (Mt 5³); 'si vis perfectus esse, vade, vende quae habes, et da pauperibus' (Mt 19²¹); 'non potestis Deo servire et Mammonae . . . ne solliciti sitis animae vestrae quid manducetis, neque corpori vestro quid induamini,' etc. (Mt 6²⁴). 'Sunt eunuchi qui seipsos castraverunt propter regnum coelorum. Qui potest capere, capiat' (Mt 19¹²). Cf. St. Paul (1 Co 7¹, 32-35). 'Si quis vult post me venire, abneget semetipsum, et tollat crucem suam, et sequatur me' (Mt 16²⁴; cf. 10³⁸).

The first monks, like the ascetics before them, took these words of the gospel literally and aban-

¹ Heimbucher, i. 51 f.; art. 'Dervish,' in *Kath. Lexicon*, iii. 1527 f.

² It should be remarked that this is the conclusion now reached by writers of very different opinions, such as Berlière, *L'Ordre monastique*, Leclercq, *loc. cit.*, Grützmacher, *loc. cit.*, and Workman, *The Evolution of the Monastic Ideal*, p. 86 f. An exception must be made, as we have already pointed out, for certain Jewish institutions, since between Jews and Christians many principles and religious ideas are held in common.

doned all that they had in order to live in poverty and by the labour of their hands. They practised chastity under the form of complete celibacy and perfect continence. The practice of obedience consisted in following in the footsteps of Jesus Christ, recognizing Him as their Master, and in submission to those who represent Him here below. In the case of the cenobites this obedience was the result of their very life itself. The moment that many monks united to live together, they were obliged to adopt a rule of life which would be the same for all, and to submit to the authority of a head. This, again, was but to obey Christ, by showing obedience to the Rule or to him who was its guardian. Schenoudi of Atripe obliged his monks to make a profession of obedience to the Rule of the monastery. This profession was a written and signed engagement, and was preserved in the archives of the monastery.¹ The greater number of monasteries had the same custom under one form or another. These virtues were taught and practised by all the early monks, and, as soon as monastic customs began to be drawn up and codified, we find severe laws laid down to ensure their practice.

2. Mortification (fasting, etc.).—Along with these virtues we find others which in reality flow from them or complete them, and which were always practised by the monks and prescribed by the different Rules. Mortification is essential to the practice of asceticism; it takes the form of the renunciation of the pleasures of sense (chastity, celibacy, fasting, etc.); work, silence, prayer even, may all be considered forms of mortification. As in all schools of asceticism (Neo-Platonist, Buddhist, etc.), fasting is considered one of the essential exercises of the Christian 'athlete'; Jesus taught it to His disciples and practised it Himself; and it was regarded by the monks as one of the most efficacious of all exercises of mortification. The history of the early solitaries tells of intrepid fasters who passed two, three, and even five days without touching food. The custom of taking food only once during the week from Monday to Saturday which was observed by those known as 'Hebdomadarii' was common.² There is, in fact, no monastic Rule in which restraint in matters of food and drink is not arranged for.

It is chiefly in the monasteries of the East (Syria, Palestine, Asia Minor) that one comes across extraordinary forms of mortification; though these must be regarded as exceptional cases, they cannot be passed over in silence. There were, first of all, the Stylites and the Dendrites, who condemned themselves to perpetual immobility, the former on their columns, the latter on the branch of a tree. Then there were the *βουκολ*, or 'Browsers,' mentioned by Sozomen. These were solitaries of Mesopotamia, and were so called because they lived on grass like cattle. Others, again, chained themselves to a rock, or bore on their shoulders a species of cangue, or yoke. Sozomen also speaks of a Syrian monk who abstained from eating bread during eighty years.³ All these are exceptional cases, and are even regarded by some as mere eccentricities, recalling the practices of the *fagirs* of India. It should be noted carefully that the monastic Rules not only never prescribe such feats of strength, but even condemn them.⁴

3. **Work.**—Certain fanatics, such as the Mes-salians or Euchites (*q.v.*), maintained that the life of a monk should be entirely given up to prayer; hence they condemned all work or other forms of activity. This tendency was early reprobated by the Church; all monastic founders or legislators realized the danger of such exaggerations; and one and all signalized the vice of idleness as the one most to be dreaded in the monastic life. St. Augustine, in his treatise *de Labore Monachorum*, condemns this error, and shows the real necessity of work for those who follow the monastic vocation. Already in the East, during the 4th cent., it was an established principle that the monk should live by the labour of his hands. The work of the monk was of two kinds: (a) manual, and (b) intellectual.

(a) *Manual.*—The manual labour of the early monks consisted chiefly in the weaving of mats or the cultivation of the soil. These occupations had as their principal motive not so much interest or gain as mortification in addition to all the mortifications already forming part of their existence, and especially the avoidance of idleness. The proceeds of their work were usually handed over by the monks to the poor or to the prisoners, or else they served to sustain the community itself (Cassian, *de Cenobiorum institutis*, x. 22 [*PL* xlix. 388 f.]). In the case of the monks of the West this manual work was carried out in so orderly and methodical a manner that it resulted in the clearing of a large part of the waste-land of Europe.¹

The various arts and crafts had also their place in monastic activity, but in the West rather than in the East. A monastery came, in course of time, to form a little city in itself. Founded, as most monasteries then were, far from the towns and centres of worldly activity, they were obliged to provide for themselves, and, besides cultivating the soil, the monks had to give themselves to the exercise of the various trades necessary for their wants—*e.g.*, baking, carpentry, weaving, etc. In addition to the arts of drawing and miniature painting, architecture, sculpture, and the fine arts were cultivated with great success.

(b) *Intellectual.*—The intellectual work of the monks consisted chiefly in the *lectio divina*, *i.e.* the reading and study of the sacred Scripture and other holy writings. In the West this part of the monastic curriculum underwent a great development. More and more time was given to intellectual work. The copying of ancient MSS in the scriptorium of the monastery became one of the principal occupations of the monk, and it is to this fact that we owe the preservation of the greater part of the works of classical antiquity. The arts of calligraphy, drawing, painting, and the illumination of MSS soon followed as a natural consequence, and some monasteries had attached to them studies, from which came forth works of art that are now among the most precious possessions of the libraries of Europe.²

(c) *External work; the sacred ministry.*—The monks, especially in the East, retired from the world into solitude, there to lead lives of prayer and labour apart from all intercourse with it. They took part in the external ministry of the Church only on rare occasions and by force of special circumstances. A number of monasteries, however, received 'oblates,' *i.e.* children conse-

crated from an early age by their parents to the monastic state. These it was necessary to instruct; hence schools were established in the monasteries, some of which became famous and were attended by secular students as well.¹

In the West the monks were led in time to take up in certain countries—*e.g.*, England and Germany—the work of evangelizing the people. They thus became missionaries, and had, in fact, a large part in bringing about the conversion of Europe.

4. **Prayer.**—But it was always clearly understood that neither work nor any other occupation should absorb the whole of the monk's activity. A considerable part of his time was always devoted to prayer. In substance this prayer consisted in meditation on, or recitation of, the Psalter, which was distributed according to the days of the week or the hours of each day. It was organized more methodically when regular monasteries began to be established in greater numbers; and from it has evolved the divine office as we now have it, with its different 'Hours' for the night and the day—Matins, Lauds, Prime, Tierce, Sext, None, Vespers, and Compline.²

5. **Silence.**—Silence, recommended by philosophers as a necessary condition for meditation or intellectual research, was one of the practices most rigorously enforced in the monastic life. In the case of the hermits, living in complete isolation, silence was practically absolute, and rare were the occasions on which they could indulge in conversation. They did, however, occasionally visit one another, and sometimes returned to their monasteries for a certain length of time. For the cenobites talking was naturally of more frequent occurrence, but severe regulations were established on this point in the greater number of monasteries.

6. **Solitude.**—Solitude, as in the case of silence, was interpreted in a more or less wide sense. For the anchorites, hermits, and Stylites, living in their caves, in their tombs, or on their pillars, solitude was absolute and complete. For the cenobites it consisted rather in their separation from the world, in the practice of silence, and in certain restraints. It is this need of solitude that may be said to have given to monastic architecture its principal characteristics and the disposition of its various parts. The monastery was enclosed by walls; one gate alone gave access to it. Communication with the outside world was subject to strict control, and, to render the necessity less frequent, the monastery, like a little city, was to be self-contained. There were exercised all the different trades and crafts demanded by the needs of the community.

7. **Stability.**—Stability, *i.e.* the engagement undertaken by a monk to remain all his life in the same monastery, was only an accidental condition of the monastic state, and was not established everywhere. In certain regions a monk could, without any breach of his vows, pass from one monastery to another. The abuse of this custom, as seen in the wandering monks, or 'Gyrovagi' (see below, iii. 6), and other considerations as well, led to the establishment of stability as a law of the monastic state, which little by little became general. St. Caesarius of Arles imposes it in his Rule, and also St. Benedict.³

ii. CUSTOMS, ORGANIZATION, HIERARCHY, CONSTITUTIONS OF THE MONASTERY, RULES, COSTUME. —The hermits and anchorites lived separate and alone in the desert; hence they were their own masters. It often happened, however, that the hermit, sensible of the dangers resulting from this independence, would submit himself to the direction of another, whom he regarded as his spiritual father. Sometimes colonies of hermits were formed under the direction of a head, to whom the others rendered obedience. Again, we find hermits living near a monastery of cenobites, to which they were obliged to return at certain times, generally on Saturday and Sunday and on feast-days. With regard to the monastic hierarchy and the organization of authority among the cenobites, great variation is to be observed in primitive ages. It was generally, however, fairly simple in character. At the head of the monastery was a superior, at once spiritual father and temporal administrator, who was known by the various titles of archimandrite (*ἀρχιμανδρίτης*), hegumenos (*ἡγεμὸν*, *ἡγεμονεύς*, *ἡγούμενος*), abbot (*ἀββᾶς* and *ἄμμια*),¹ *προεστώς*, *praepositus*, or provost, etc. This superior governed the community, sometimes with the help of an assistant and other officials who fulfilled various charges, such as cellarer, porter, etc. He was generally assisted also by a council composed of the older members of the community (*seniores*). The office of the seniors, who were nominated by the superior himself, expired at the end of the year. The government of these monastic societies was a monarchy rather than an oligarchy; often it was even an absolute monarchy.² The cellarer (*κελλαρίης*, whence *cellerarius*, 'cellarer'), the official who had charge of the stores of the monastery, had, as a rule, very wide powers over the temporal affairs of the monastery. Sometimes the abbot, as already mentioned, was assisted in his office by an official who ranked second after himself in the monastery; sometimes there was a third as well (prior and superior).

The monasteries thus constituted usually enjoyed complete autonomy. There was nothing resembling the modern order or congregation, in which the different religious houses are united under a superior-in-chief or 'general,' and depend upon one house, which is the mother-house of the whole congregation. In the West it was not till the time of St. Benedict of Aniane that the idea of grouping monasteries together under a central authority was actually realized. For example, St. Basil in his Rule, which was the law everywhere in the East, contents himself with giving a few general principles as to the choice of the superior and the exercise of authority. In certain monastic colonies, too, the organization was very rudimentary in character. St. Anthony and St. Hilarion, e.g., were the spiritual and temporal heads of the communities founded by them, and unity and order were maintained by visiting the various houses subject to them (*Vita S. Hilarionis*, ch. iii.).

Nevertheless, even in the early age of monasticism, we have instances of the attempt to group certain monasteries together under a central authority. Pachomius, e.g., formed his monasteries into a real 'congregation.' He visited each house in turn; he assembled the superiors together four times a year in what closely resembled the general chapters of later days. In these assem-

bles the interests and affairs of the various communities were discussed and settled. Pachomius himself nominated the superiors of the different houses, and a 'procurator-general' for the whole confederation. Tabenna, the head-house of this congregation, was an almost military organization. The monks were divided into companies, often under an official called the dean; ten companies formed a further division, at the head of which was another official. At an early period the Rules, or constitutions, of the various monasteries came to be written down. A great number of these exist, some of which can be safely attributed to the most ancient masters of the monastic life. We shall speak only of the principal ones.

The *Regula Antonii* cannot be regarded as the work of St. Anthony himself, but it is extremely ancient.³ This collection of maxims on the monastic life was brought together in Egypt, in the course of the 4th cent., but there is nothing against the belief that many of them are authentic and of much earlier date than the collection itself.⁴ The same may be said of the authenticity and age of the *Regula ad Monachos Macarii Alex.* (PG xxxiv. 967-970), and the *Regula ad Monachos Serapionis, Macarii, Paphnutii et aliorum Macarii* (PG xxxiv. 971-978).

The Rule of St. Basil (*Ὅροι κατὰ πλάτος, Regulae fursus tractatae*; *Ὅροι κατ' ἐντομήν, Regulae brevis tractatae* [PG xxxi. 889-1052, 1080-1305], tr. Rußnus, in L. Holste, *Codex Regularum*, Paris, 1861, i. 67 f.; cf. C. T. G. Schoenemann, *Bibl. Patr. Latina*, Leipzig, 1792-94, i. 619 ff.) has had a wide influence on Oriental monasticism, and is at the present day practically the only Rule existing. Even in the West its influence was considerable, as may be seen—to cite but one example—from the reference made to it in the Rule of St. Benedict. A long letter, written by St. Basil to St. Gregory of Nazianzus before the drawing up of his Rule, may be regarded as an outline or rough draft of the latter.⁵

The Rules attributed to St. Pachomius and to Shenoudi, although not authentic in the same sense as the Rule of St. Basil, are, nevertheless, substantially their work in spite of later retouching and additions.⁶ The Rule of Pachomius, written originally in Coptic, was translated into Greek and Latin (Ladeuze, p. 272). There are three texts of the Rule of Shenoudi (cf. *Monuments de la mission archéologique française au Caire*, iv. 235 f., and Leclercq, in *DACL* ii. 2 311).

The *Book of the Governors* of Thomas of Marga, of the 6th cent., describes the life led by the cenobites and anchorites of the Nestorian monastery of Beth-Abhe in Mesopotamia.⁷

In the West, besides Cassian, whose two works exercised the widest influence on monasticism in that part of the world,⁸ we must mention the Rule of St. Benedict, *Regula S. Patris Benedicti*.⁹

Other Rules are: the *Regula incerti auctoris*, later than the works of Cassian, but earlier than the Rule of St. Benedict (Holste, *Codex Regularum*, ed. M. Brockie, Augsburg, 1759, i. 187 f.), the *Regula Sanctorum Pauli et Stephani*, almost contemporary with that of St. Benedict (ib. i. 188 f.), the Rule for nuns attributed to St. Augustine, *Ep. cxxi.* (ib. i. 141). For this Rule and those of SS. Fructuosus and Isidore, see, further, v. iii. 1 (d) below.

Several Rules written for the Celtic monks are in existence. The Rule written in verse, and attributed to St. Allbe, is not, strictly speaking, a Rule. That attributed to St. Columba is a short collection of prescriptions and maxims of asceticism, and was written for the use of solitaries. There are also other documents of the same character, attributed with more or less likelihood to St. Congall of Bangor and others. The Rule of

¹ Cf. B. Contzen, *Die Regel des heil. Antonius*, Mettengymnasialprogramm, 1895-96; *Apophthegmata Patrum* (PG lxxv. 71-440); *Verba Seniorum* (PL lxxviii. 789-810); and J. B. Cotelier, *Écoles Græco-Monastiques*, Paris, 1877-86, i. 424.

⁶ E. A. W. Budge, *The Book of the Governors: Historia Monastica of Thomas, Bishop of Marga*, A.D. 840, ed. from Syriac MSS. 2 vols., London, 1893.

⁷ See below, v. iii. 1 (b).

⁸ On the Rule of St. Benedict, the authenticity of which is incontestable, and its various edd. see below, p. 792 f., note 1.

¹ The word 'abbot' did not originally designate the superior (cf. J. M. Besse, *Les Moines d'Orient*, Paris, 1901, p. 188; also art. 'Ama,' *DACL* i. 2 1306-1323).

² Monastic government has even been presented as a kind of 'spiritual democracy' (Workman, p. 132). This is true, in a sense, but the monastic form of government cannot in reality be ranged under any very definite category. It possesses the characteristics alike of monarchy, oligarchy, and democracy.

St. Columban, his Penitentiary, and that of St. Cummian, are the only ones the authentic character of which is really established.¹ At an early date collections were made of all these monastic Rules.²

The question of monastic costume is one with regard to which the different Rules show a bewildering variety. It is also, from the archaeological point of view, one of the least clear. It seems that there was originally no special dress for monks. The only rule on this point seems to have been that the monk in his character of ascetic should, like certain ancient philosophers, show in his costume the outward sign of the poverty and humility of his state of life and of his detachment from the things of this world. Even St. Benedict, at a time when monasticism already had customs and traditions both numerous and of long-established date, does not seem to have given much importance to the form, colour, or quality of the habit worn by his monks (*Regula*, ch. lv.). Nevertheless, at an early date certain garments worn by the monks, and borrowed in all probability from the peasant population among whom they lived, came to be regarded as traditional, and in time even had a mystic meaning attached to them, as in the case of the liturgical vestments. In spite of this the monastic habit must always be carefully distinguished from the latter category.

We may now enter into greater detail regarding the various garments worn by the ancient monks both in the East and in the West. Many of these garments are still in use among their descendants.

The ancients did not know the use of linen. The tunic of wool was their only under-garment (*λεβρίον, κόλοβη, colobium*). The monks adopted this. It had short sleeves or was sleeveless. The anchorites often wore the tunic made of goatskin or camel's hair, which acted as a veritable hair-shirt (Cassian, *Instit.* i. 8 [*PL* xix. 74]). The tunic was girded by a cincture, which recalled that worn by John the Baptist ('zona pellicea circa lumbos suos,' Mt 34), and which soon became an essential part of the monk's habit. It was usually made of leather (*ornatura, zona, ζώνη, balteus, cingulum*, etc.).³ The hood and the scapular are also characteristic of the monastic habit. The first (*cucullus, cucullo*) was originally merely a covering for the head. It was, in fact, the ordinary head-covering of peasants, and is found in both East and West. It protected the head against the heat or the cold, and could be thrown back at will on the shoulders.⁴ The hood came in time to be attached to a garment covering the shoulders and breast to protect them against the weather, and finally developed, after various transformations, into the cowl—an ample vestment falling in wide folds to the feet and with large sleeves. The cowl is the distinctive choir-habit of the monk. The scapular (*scapulare*) seems to be peculiar to Benedictine monks, since there is no mention of it before the time of St. Benedict. Still it is evident, from the text of his Rule, that it was not his own invention. By some it has been compared to an analogous garment worn by Eastern monks; but it is more probable that it was originally a kind of blouse or smock-trook with hood attached, such as was worn by peasants in the neighbourhood of Monte Cassino. St. Benedict prescribes it as a working dress—'scapulare propter opera.' It was worn to protect the rest of the habit, and replaced the cowl. Its etymology indicates that it covered the shoulders.⁵

The Eastern monks usually went barefooted. St. Pachomius, however, gave his monks sandals, and St. Benedict speaks of

'pedules et caligae,' which seem to have been a kind of stocking, or sock, and sandals. Archaeologists have disputed at length as to the exact meaning of these terms and also regarding the other parts of the monastic habit.¹

iii. DIFFERENT TYPES OF MONKS.—The monks may be divided into various classes.

1. Hermits.—The hermits (*ἐρημίται*, from *ἐρημος*, 'desert') lived in solitude in the desert; St. John the Baptist, and later St. Paul the Hermit and St. Anthony, were the first of these.

2. Anachorites or anchorites (*ἀναχωρηταί*, from *ἀναχώρημα*, 'retreat').—This title is synonymous with the first, and indicates those monks who practised the solitary life. This form of the monastic life is the most ancient; it spread, first of all, in Egypt, then in Palestine and Syria, through the whole of the Eastern world, and, finally, in the West.² In course of time the Camaldolese, Carthusians, Hermits of St. Augustine, and certain other institutions of like character arose. These may be grouped under the class of anchorites or hermits, since they have preserved, along with the cenobitic element in their lives, many of the characteristics of the eremitic state.

3. Recluses and Stylites.—With the hermits and anchorites must be classed the recluses and Stylites, who, on account of their relatively small number, may be regarded as exceptional cases. The former lived enclosed in cells, sometimes completely walled up and communicating with the exterior only by means of a small window. The latter, who are found almost exclusively in the East, lived on the top of a pillar, more or less elevated from the ground.³

4. Dendrites.—The Dendrites (from *δένδρον*, 'tree') lived in trees.

5. Cenobites (from *κοινός*, 'one who lives in common with others').—This was the general term for all monks living together in community. During the primitive period the comparative advantages and excellence of the solitary and cenobitic forms of monastic life formed the subject of frequent discussions. St. Basil stoutly maintains his preference for the cenobitic life over the eremitic life, and his preference is shared by St. Benedict. It is undeniable that in early days the eremitic life had the greater number of adherents; but in course of time it declined, even in the East, while, in the West, it cannot be said ever to have existed except as an exceptional state of things. After the 16th cent. it almost completely disappeared.⁴

6. Sarabaites and Gyrovagi, or Circumcelliones.—Among the other monastic types, ancient authors draw attention to the Sarabaites and the Gyrovagi, who were regarded as an evil kind of monks. The first, mentioned by St. Jerome under their Syriac name of 'Remoboth' (*Ep.* xxii. 34 [*PL* xxii. 419]), lived together in twos and threes in a monastery, in order to live a life without

¹ Holste gives two other Rules attributed to SS. Comgall and Columba. For this question see L. Gougaud, 'Inventaire des règles monastiques irlandaises,' in *Revue Bénédictine*, xxv. [1908] 167-184, 321-338; O. Seebass, *Ueber Columba von Luxeuil Klosterregel*, Dresden, 1888; Leclercq, in *DAOL* ii. 2 3212 f.

² The earliest and most celebrated of these collections is that made by St. Benedict of Aniane († 821), entitled *Concordia Regularum (Concordia Regularum nunc primum edita ex Bibliotheca Moriacensis Monasterii, notisque et observationibus illustrata ad H. Menard O.S.B., Paris, 1895 [= PL ciii. 701-1890])*; cf. L. Traube, 'Bibliotheca Goerresiana,' in *Neues Archiv für ältere deutsche Geschichtskunde*, xcvi. [1902] 787 f. For other attempts of this kind see J. Trithemius, Aubert Le Mire, etc.; cf. also Heimbucher, i. 76. Of more recent date: L. Holste, *Codex Regularum Monasticarum et Canoniarum*, 6 vols., Rome, 1861, completed by Brockie, *Holstenii Cod. regular. etc. nunc auctus, amplificatus et observ. criticis historiis illustratus*, Augsburg, 1769 (*PL* ciii. 898-700).

² Cf. Heimbucher, i. 41.

³ For the recluses cf. *Hist. Laus.* 43; Theodoret, *Hist. rel.* 29, 80, etc. (*PG* lxxxi. 1490-1494); R. M. Clay, 'The Hermits and Anchorites of England,' in *The Antiquary's Book*, London, 1914; Heimbucher, i. 145, note; for the Stylites, all quotations in H. Delehaye, *Les Stylites*, Brussels, 1895; Vailhé, 'Les Stylites de Constantinople,' in *Revue d'Orient*, 1898; for the different classes of monks cf. Besse, p. 19 f.

⁴ Cf. Synod of Vannes, 465, canon 7; Synod of Agde, 506, canon 98; G. D. Mansi, *Concilia*, Paris reprint, 1901-13, vii. 954, viii. 881.

either rule or law, following no other rule than that of their own will or caprice. The Gyrovagi or Circumcelliones ('vagabonds') went from monastery to monastery, demanding a lodging for a few days, and scandalizing all true Christians by their excesses.¹

7. *Catenati*.—As the name indicates, these monks loaded themselves with chains. They took no care of their bodies, allowed their hair and beards to grow neglected and untrimmed, went barefooted, and wore a black cloak (Leclercq, in *DACL* ii.² 3218).

8. *Apotactites* (from ἀποτάσσειν, 'to renounce'; cf. Lk 14³³).—These formed a class intermediary between the earlier ascetics and the monks properly so called. They are found in Jerusalem, in the East, and in Asia Minor. Some of them followed the example of the Gyrovagi, and spent their life wandering about, and some fell into the heresy of the Encratites.²

IV. HISTORY OF MONASTICISM.—I. ORIGIN OF THE MONASTIC LIFE; THE ASCETICS.—The ascetics of early Christianity may be regarded as the ancestors of the monks. The greater number of the characteristics of which we have already spoken as belonging to the essence of the monastic life are found among the ascetics—poverty, celibacy, the practice of mortification, fasting, silence, prayer, etc. The ascetics were, in fact, simply monks living in the world.

'Asceticism and cenobitism are inseparable. Asceticism is an individual phenomenon, cenobitism is a social institution.'³ It was but natural that, as Christians gradually became more worldly, the ascetics should retire from their midst and betake themselves to the desert; and here we have the origin of true monasticism—the first monks were ascetics living retired from the world in the desert.

This is not the place to enter upon a detailed history of these Christian ascetics (see art. ASCETICISM). But it may be remarked, in passing, that Christian asceticism, while recognizing among some of the prophets and just men of the Old Law (such as Isaiah, Jeremiah, and John the Baptist) its ancestors or forerunners, claims, above all, as its source and foundation the doctrine of Jesus Christ, who taught renunciation under all its forms. Not to mention certain texts occurring in the writings of the Apostolic Fathers—in those, e.g., of Tertullian, Origen, and Clement of Alexandria, whose 'true Gnosticism' offers many characteristics of asceticism—one may consult certain documents that will give assistance in arriving at a knowledge of this movement precursory of monasticism, especially the *Epistles* of pseudo-Clement 'To Virgins' and the work of pseudo-Cyprian, *de Singularitate Clericorum*.⁴

ii. MONASTICISM IN THE EAST.—I. Sources.—The question of the authenticity and truthfulness of the documents on which the history of the early years of Eastern monasticism is founded has given rise, in recent years, to lengthy and impassioned disputes.

¹ For these different kinds of monks cf. Cassian, *Collationes*, xviii. ch. iv f. (*PL* xlix. 1098 f.), and *Institutiones*, v. 36, with the notes by A. Gazée (*PL* xlix. 256); *Regula S. Benedicti*, i.; *Regula Magistri*, i., St. Jerome, *Ep.* xxii. 'ad Eustochium' (*PL* xxi. 419 f.); St. Augustine, *de Opere Monachorum*, 28 (*PL* xl. 675 f.).

² Cf. art. 'Apotactiques, Apotaxamènes,' in *DACL* i.² 2604 f.; Cahrol, *Étude sur la Pérégrination Silvica*, p. 185 f.

³ Leclercq, in *DACL* ii.² 8048 f.; cf. Zöckler, *Askese und Monachum*.

⁴ Cf. Leclercq, in *DACL* ii.² 8078-8090; Heimbucher, *II*. 86 f.; N. M. Antonelli, 'Dissertatio de Ascetis,' in *Sancti Patris Jacobi Episcopi Nubeni sermones, cum præfatione, notis, etc.*, Rome, 1766; S. Schliewitz, 'Vorgeschichte des Mönchtums oder das Ascetentum der drei ersten christl. Jahrh.,' in *Archiv für kath. Kirchenrecht*, i. [1898] 81 f., ii. 808 f.; and especially F. Martínez, 'L'Ascétisme chrétien pendant les trois premiers siècles de l'Eglise,' in *Les Études de théologie historique de l'Institut Catholique de Paris*, Paris, 1914.

(a) *Vita Pauli*.—The *Vita Pauli*, written by St. Jerome, is sometimes considered to have no serious historical basis. The first of the hermits withdrew to the desert not before the middle of the 3rd cent., and, towards the end of his life, would have made the acquaintance of St. Anthony.¹

(b) *Vita Antonii*.—If the authentic character of St. Jerome's life of Paul the first hermit be denied, it is St. Anthony who must be regarded as the father of the eremitic life. The *Vita Antonii*, attributed to St. Athanasius, has serious historical foundation, despite the discussions of which it also has been the subject.² In it St. Athanasius describes the life of a man whom he has himself known, and who died between 356 and 362. According to this life, Anthony was born at Coma, or Comon, in the middle of Egypt. At the age of 20, on hearing the passage in the Gospel of St. Matthew regarding the rich young man (19^{12a}), he sold his belongings and put himself under the direction of an ascetic in order to learn the practice of Christian renunciation. Then he retired to the desert and led the life of a hermit for twenty years, a number of disciples gathering round him. During the persecution of Maximian, he went to Alexandria to fortify his brethren in the faith, returning there again, later on, to refute Arius. Living retired in his desert, he visited from time to time the colonies of hermits who had been his disciples and who peopled the desert. He died in 356 (or 362), at the age of 105. We have already seen what is to be thought of his Rule. The letters and sermons attributed to him are not more authentic in character (*PG* xl. 963-1066).

(c) *Lausiac History of Palladius*.—Another document which has been much disputed is the *Lausiac History of Palladius* (*PRE³* xlii. 219); it recounts the origins of monasticism. Weingarten and Lucius see in it nothing more than a romance, and Amélineau has further complicated the question by the unjustifiable use of the Coptic sources. Butler, in his excellent work on the subject, *The Lausiac History of Palladius* (Cambridge, 1898-1904, i. 257-277), has re-established the real text and demonstrated its importance from the historical point of view.³

(d) *Rufinus*.—Rufinus of Aquileia († 410) travelled through Egypt in order to visit the most celebrated solitaries, and his *Historia Monachorum* furnishes interesting details on the monastic life in that country.⁴

(e) *Cassian*.—Far more important for the history of monastic institutions, customs, and teaching are the two works of Cassian—*de Institutionibus Cœnobiorum* (12 books), and *Collationes Patrum* (24 Conferences). Cassian, like Rufinus, travelled about from one monastic colony to another in Egypt and Palestine in order to be initiated into the manner of life there observed.⁵

(f) *Peregrinatio Etheria*.—The *Peregrinatio ad loca sancta*, of which the date has been so much disputed, but which can, in all probability, be assigned to the latter half of the 4th cent., is the account of a pilgrimage to the monasteries of Egypt, the peninsula of Sinai, Palestine, and Syria, and gives many interesting details regarding the hermits and the monasteries of the period.⁶ There are many other sources of Eastern monastic history, but the historians and writers of the 4th, 5th, and 6th centuries, such as Eusebius, Theodoret, Sozomen, Socrates, etc., afford less room for discussions as to authenticity and credibility, and their testimony serves to control the truth of the accounts furnished by Palladius, Rufinus, and the others.

2. History.—Apart from the life of St. Anthony, summarized above, the general lines of monastic history in the East may be presented as follows.

(a) *Egypt*.—Amun (Ammonius), a contemporary of St. Anthony, founded colonies of hermits in

¹ Weingarten, *PRE³* x. 760; Grützmacher, *PRE³* xlii. 217, and *Hieronymus*, Leipzig, 1901, i. 160; see, however, in favour of the reality of his existence, Butler, *Laus. Hist.* i. 281; Workman, p. 96.

² On the *Vita Antonii* cf. Weingarten, 'Ursprung,' p. 21 f.; H. Gwatkin, *Studies of Arianism*, Cambridge, 1882, pp. 102-107, *Arian Controversy*, London, 1898, p. 48; F. W. Farrar, *Lives of the Fathers*, Edinburgh, 1889, i. 461; in favour of the historicity, A. Robertson, 'Athanasius,' in *Port-Nicene Fathers*, iv., Oxford, 1892, p. 189; Butler, i. 178 ff.; Workman, p. 854.

³ Cf. Ladeuze, *op. cit.*; E. Preuschen, *Palladius und Rufinus: ein Beitrag zur Quellenkunde des ältesten Mönchtums* (TU), Gießen, 1897.

⁴ The authenticity and veracity of the *Historia Monachorum* have also been the subject of much discussion, but it has a certain historical value. For discussions regarding the text see the works of Butler, Ladeuze, and Preuschen, already cited in reference to Palladius; see also Leclercq, in *DACL* ii.² 3008 ff.

⁵ Cahrol, art. 'Cassian,' in *DACL* ii.² 2848-2857; O. Bardenheuer, *Patrology*, Eng. tr., Freiburg i. Br., 1908, p. 616 ff. The text of the Rule of Cassian, which was believed to be lost, has recently been discovered in Munich and at the Escorial (cf. H. Plenkers, *Untersuchungen zur Überlieferungsgesch. der ältesten lateinischen Mönchsregeln*, Munich, 1906, pp. 70-84).

⁶ *Sanctæ Silvæ Aquilane Peregrinatio ad loca sancta*, ed. G. F. Gamurrini, Rome, 1887; other edd.: F. Geyer, Vienna, 1898, E. A. Bechtel, Chicago, 1902; cf. M. Férotin, 'Le véritable Auteur de la Pérégrination Silvica, la vierge espagnole Etheria,' in *Revue des questions historiques*, lxxiv. [1908] 867-897; and *PRE³* xviii. 846-847.

Lower Egypt, and was the father of monasticism in Nitria.¹ His disciples lived in huts and met together in the monastic church on Saturdays and Sundays. There were 8 priests in the colony to carry out the liturgical functions for the community. According to the *Lausiac History*, there were 600 hermits in the desert of Nitria. Idleness was carefully excluded, each monk being obliged to provide for himself by his own labour. In the evening psalms and hymns were chanted. The discipline of the life was very strict. Ammonius died before 356. His disciples continued his traditions in Nitria. The theological works of Origen were studied there, and the 'tall brothers,' Ammonius, Dioscorus, Eusebius, and Euthymius, who made such a disturbance in the theological world later on, belonged to this monastic family.²

About six miles to the south of the mountain of Nitria was the Desert of Scete, where another colony of hermits was established. The brethren observed perpetual silence; as at Nitria, they assembled in church for the offices only on Saturdays and Sundays. Their cells were either mere caverns in the rocks or else walled cabins. Macarius the Greater († 383 or 387) was the first of these hermits. He has left behind him among the *Apophthegmata* a series of remarkable maxims and homilies that show him to have been one of the founders of Christian mysticism.³ Macarius the Younger, Evagrius Ponticus, and Mark the Hermit are also figures that stand out among these solitaries.⁴ The Desert of Scete still preserves the ruins of their ancient monasteries, one of which, known as the monastery of St. Macarius, is inhabited by a few Coptic monks.⁵

Besides Nitria and Scete, the whole of Egypt was strewn with hermitages—the Thebaid, Lycopolis, Kopres, Oxyrhynchus (where there were to be found, it is said, 10,000 monks and 20,000 nuns), and Arsinoë, where there were also 10,000 monks (*Hist. Laus.* 5, 18).

In Upper Egypt the name of Pachomius attracted special attention. He was instructed in the monastic life by a venerable hermit named Palamon, and established himself at Tabenna (Tabennisi)—a name that was to remain famous in monastic history. Pachomius is the real founder of the cenobitic life. His disciples lived together under the same roof and were subject to the same discipline. Other monasteries were founded which followed the same observance, and thus cenobitism was established. Regarding the organization of the Pachomian monasteries see above (p. 785; cf. also W. E. Crum, *Theological Texts from Coptic Papyri*, edited with an Appendix upon the Arabic and Coptic Versions of the Life of Pachomius, *Anecdota Oecumenica*, Semitic ser., pt. ii, 1913).

While speaking of Pachomius, we must not omit to mention one of his disciples named Shenoudi of Atri, whose history has been revealed recently through Coptic MSS, and who, although he did not exercise so marked an influence as Pachomius, played an important part in the history of the cenobitic life. The profession of obedience which he imposed on his monks is the oldest document of

this kind that we possess, and it marks a stage in the history of monastic Rules. Shenoudi made the attempt to combine the eremitic with the cenobitic life, and he succeeded to a certain extent.¹

(b) *Sinai*.—From Egypt the monastic life soon spread as far as the Sinaitic peninsula, on which there were later several flourishing monasteries. St. Nilus the Sinaitic († c. 430) and St. John Climacus were its shining lights, and may be regarded as the great doctors of the ascetic life. The *Peregrinatio Etheriae* gives interesting details regarding the monasteries of Sinai (see below iii. 1 (d)).

(c) *Palestine*.—The monastic foundations of Palestine were no less illustrious. It will suffice to quote the names of Hilarion of Gaza, a disciple of St. Anthony of Egypt, and especially those of Melania the Elder at the Mount of Olives, Paula, and St. Jerome.² In this region monasticism made considerable headway. The number of monasteries and lauras rose to 100, and the influence of these religious houses in the quarrels between Origenism, Eutychianism, Monothelitism, and iconoclasm was very important. It would be impossible to give here even a résumé of this history; we must be content to refer the reader to the authors cited in note 2 below, and also to the attempt at a classification of some of the Palestinian monasteries in Leclercq, *DACL* ii. 2 3165–3175. It was only with the Arab invasion of Palestine that the progress of these monasteries was arrested.

(d) *Syria*.—Syria became at an early period a land of monasteries. It has even been questioned whether the monastic life there was not indigenous, i.e., whether it did not, as in Egypt, spring directly from the native practice of asceticism—which must be regarded as an early phase of monasticism—or whether, on the other hand, it was an importation from without. The latter opinion seems to be the more likely. The Syrian life of Mark-Arogin, beneath its legendary surface, contains a residue of history that can be extracted with little difficulty. According to this history, he came from a Pachomian monastery, established himself among the mountains near Nisibis, and died there in 363, leaving behind him a flourishing monastic house.³ The recently edited works of Aphraates give some curious information about other solitaries (*μωάφορες*), who seem to have been ascetics living in the world rather than real monks.⁴

At Edessa and in Osroene we have Julian regarded as the founder of monastic life in that country, and especially Ephraim the Syrian, a contemporary of St. Basil. He lived many years as a hermit, then went to study monastic tradi-

¹ With regard to Shenoudi see Amélineau, *Mémoires publiés par la mission archéol. au Caire*, iv. [1885 f.], i.; J. tions under the guidance of St. Basil, and perhaps visited Egypt also. He is one of the principal scholars of the Syrian Church, and his numerous works contain much information regarding the monastic life.¹

There were colonies of hermits in Cilicia, round about Antioch, and in the Desert of Chalcis in the 4th century. The Desert of Chalcis was known as the Thebaid of Syria, and there St. Jerome lived as a hermit from 373 to 380.² In the 5th cent. the first of the Stylites, St. Simeon, makes his appearance in the north of Syria (Theod. *Hist. Rel.* 26 [PG lxxxii. 1464 ff.]). This strange form of monastic life survived as late as the 15th century.³

(e) *Asia Minor*.—In Asia Minor in the 2nd cent. Montanism (*q.v.*) had appeared—a movement in the direction of an excessive ultra-asceticism. In Pamphylia in the 4th and 5th centuries the Euchite or Messalian monks allowed themselves to be carried away by the same excessive views, and appear also to have undergone Manichaean influences. They were always resisted by the Church and were finally condemned, but revived during the Middle Ages in the sects of the Paulicians and Bogomils.

Eustathius of Sebaste, who introduced monasticism into Armenia, Paphlagonia, and Pontus, was of Egyptian origin and a disciple of Arius. He exercised a wide influence on monasticism in that part of the world and also spread his errors abroad. His disciples, the Eustathians, were condemned by the Church.⁴ The Council of Gangra, in 340, gives valuable information concerning the history of the ascetics and monks and the excesses of some of those whom it condemns.⁵

(f) *Cappadocia*.—It was chiefly in Cappadocia and under the inspiration of St. Gregory of Nazianzus, St. Gregory of Nyssa, and St. Basil, the real legislator of the monks of the East, that monasticism started its true development. Basil had become acquainted with the monastic life in Syria and in Palestine. He declared himself distinctly in favour of the cenobitic type, and it was for cenobites that he wrote his Rule, or rather his Rules (see above, p. 785^b). The Rule of St. Basil has remained in use in the East to the present day. It does not enter into details, but lays down in general the virtues and duties of the monastic state. The monk is the perfect Christian; the ascetic life does not consist merely in carrying out certain practices, but in the sanctification of one's whole being and in the love of one's neighbour. One must raise up and perfect nature and not destroy it. Christian perfection completes, elevates, and purifies the wisdom of the ancients. In his monasteries the education of children was undertaken, and work was recommended and encouraged. The public prayer of the community was already organized, and we find the various Hours of Matins, Tierce, Sext, None, Vespers, and the Night Office (*μεσονύκτιον*).⁶

(g) *Cyprus*.—According to St. Jerome, monasticism was brought to the island of Cyprus by Hilarion. St. Epiphanius, who had himself been a monk in Palestine, defended the monks with ardour.

(h) *Constantinople*.—When Palestine and Egypt had ceased to be the chief centres of monastic life in the East, it was Constantinople, and, later, Mt. Athos, that succeeded to that position. The

foundations attributed to Constantine or to the time of his immediate successors can, however, be admitted only with reserve.¹ It was not till towards the end of the 4th and especially during the course of the 5th cent. that monasticism began its development at Constantinople. In the reign of Justinian there were no fewer than 80 monasteries at Constantinople,² and the emperor legislated for the monastic life as for all other institutions of the empire. The Acemetae and the Studites deserve a long study to themselves; they have already formed the subject of monographs, to which we can here only draw attention in passing. The names of St. John Damascene and Theodore the Studite recall the long strife maintained by the monks on the question of the iconoclasts.³

(i) *Mount Athos*.—From the 9th, but especially during the 10th, cent. the peninsula of Mt. Athos, in the Aegean Sea, became a monastic centre of the highest importance, and formed a kind of monastic republic. Safe in their monasteries, built for the most part on steep cliffs, defended by the sea and by the thickness of their walls, the monks of this peninsula, which is connected with the mainland only by a narrow isthmus, were able to defy all attacks, and the cenobitic life has been maintained there up to the present day. The history of this monastic colony may be given in a few words. The origin of monasticism on Mt. Athos is obscure. The first testimony on which we can depend is found in the 9th cent., but it is probable that long before that there were hermits living among the rocks and in the forests of this peninsula, so well fitted for the solitary life. The year 963 is the date of the foundation of the first great monastery by St. Athanasius, one of the most celebrated of the Athos monks. From this date onwards foundations followed one another in rapid succession. The great monasteries of Iviron, Vatopedi, Xeropotamos, Esphigmenon, Dochiarou, Agios Paulos, etc., rose up in different parts of the holy mountain from the 10th to the 14th century. The latest in date is the monastery of Stavronikita, founded in 1542. A number of smaller houses and simple hermitages depend upon these greater monasteries. The Rule followed is that of St. Basil. The monasteries form a kind of confederation or little republic, which is represented by 20 members, constituting at once a parliament and a tribunal under the direction of 4 presidents, one of whom has the title of *πρόεδρος*. In each monastery the *ηγούμενος* enjoys supreme authority. In the 14th cent. the idiorhythmic form of life (*ιδιορρυθμία*) was introduced, in accordance with which, in certain of the monasteries, the monks possess money of their own and enjoy a number of dispensations. Autonomous during a certain period, the governing council of Mt. Athos was finally subjected to the jurisdiction of the patriarch of Constantinople. Under the various governments and dynasties that succeeded one another in the East—the Comneni, the Palaeologi, even the Turks themselves, and the hospodars of Wallachia—the liberty of the monks of Mt. Athos was always respected. Painting, architecture, and calligraphy were cultivated with success, and their libraries contain MSS of the highest value.⁴

iii. MONASTICISM IN THE WEST.—1. Before St. Benedict.—(a) *Rome and Italy*.—It has been remarked, and with justice, that while, in the inscriptions of the catacombs, careful mention is made of all the various degrees of the ecclesiastical hierarchy—even down to that of *fossor*—no allusion has ever been found to ascetic, anchorite, cenobite, monk, or nun.¹ The existence at Rome of monks, of consecrated virgins, and of monasteries at that period cannot, however, be denied. We leave on one side the legend of Boniface and Aglae, which is, moreover, of Eastern origin.² Constantia, daughter of Constantine, gathered together around the tomb of St. Agnes a community of virgins. It was in a Roman monastery also that St. Marcellina, sister of St. Ambrose, consecrated herself to God (352–366).³ Pammachius, another Roman patrician, along with Fabiola, lived the ascetic life, and founded near the mouth of the Tiber a hospice which was served by monks.⁴ St. Athanasius arrived in Rome after 339, accompanied by two Egyptian monks. He remained there three years and inspired this community, so deeply Christian in spirit, with admiration of and sympathy with the monastic ideal of the Thebaid. He made proselytes even from among the highest society of Rome, and Marcella, daughter of the widow Albina, along with Melania the Elder, devoted herself to the life. A community of ascetics and cenobites was founded on the Aventine, from which stand out names such as those of Sophronia, Asella, Paula, and Fabiola. The favour shown towards such institutions by Pope Damasus and, in particular, the arrival in Rome of St. Jerome, who became the spiritual father of the community on the Aventine, greatly accentuated the movement.⁵ The attempt made by Vigilantius to oppose it in favour of monasticism had no other result than that of starting a controversy with St. Jerome, from which Vigilantius came forth utterly crushed and humiliated (c. 385).⁶

In the rest of Italy the progress of monasticism was scarcely less rapid than in Rome itself. In the middle of the 4th cent. Eusebius of Vercelli, till then exiled in Egypt, returned to his church (in 363) and obliged the clergy of his cathedral to submit to the monastic rule of life. His example was soon followed in Milan, under St. Ambrose, and at Aquileia,⁷ while Cremona, under the bishop Vincent (407–422), Novara, under the bishop Gaudentius (397–417), Bologna, Ravenna, under St. Peter Chrysologus, Pavia, under the bishop Ennodius, and Turin, under the bishop Victor, all favoured the monastic movement.

In S. Italy, besides Nola with its illustrious bishop, St. Paulinus, we find monasteries at Naples, at Capua, and in Etruria, Sabina, Umbria, Picenum, at Tusculum, Monte Calvo, Fundi, on the

banks of Lake Fucino, on the islands off the Mediterranean coast of Italy, Gorgona, Capraja, Sardinia, and the Isle of Cabis (near Torrentum).¹ It would be difficult to draw up even a simple catalogue of these monasteries, so numerous were they.

Cassiodorus (c. 570) was contemporary with St. Benedict. It has even been conjectured that his Rule was borrowed from the latter, but this is no more than a conjecture. What is certain is that the minister of Theodoric, on his property of Vivarium, gave the example of a monastery where the ascetic practices of the monastic life were allied with a high degree of intellectual culture. While, on the summit of Mt. Morrus, the hermits gave themselves up to their solitary vocation, in the monastery built at the foot of the mountain the cenobites spent their time in the diligent copying of MSS.²

(b) *Gaul*.—Monasticism, which was to play so considerable a part in Gaul, was established there at an early date (2nd half of the 4th cent.) and with great éclat by St. Martin of Tours. At first it took the eremitic form. The disciples of St. Martin lived as hermits, meeting for exercises in common only on certain occasions. The first monastery founded in Gaul was that of Ligugé, in 360. There were, besides, Marmoutier (Martini Monasterium) and, no doubt, a great number of other houses, for we read that 2000 monks were present at the obsequies of St. Martin.³ St. Martin wrote no Rule for his monks, and the latter seem simply to have followed the general traditions of the ascetic life. Several of his disciples applied themselves in company with their master to the work of the apostolate. This would explain why this first attempt at monasticism in Gaul did not leave any lasting traces behind it.

We find, about the same date, that there were monks at Rouen, in the Morinie (Boulonnais, Artois, W. Flanders), in the forests, along the sea-coast, and even in the islands of the coasts.⁴

St. Sulpicius Severus, the historian of St. Martin, established a community of ascetics in his villa of Primuliacum.⁵ Gregory of Tours († 594) gives in his works most valuable information regarding the monastic movement in Gaul in the 5th and 6th centuries. The greater number of the monks whose lives he wrote, while possessing their own characteristic spirit, are still largely under the influence of the teaching of St. Martin.

The most interesting of all these experiments in the monastic life at this period is the foundation of the celebrated monastery of Lérins on an island of that name off the coast of the Mediterranean near Cannes. Monastic life, inaugurated there towards the year 410 by St. Honoratus, was to continue through many long centuries, almost without interruption, to our own day. It was at the beginning a mingling of the eremitic and cenobitic elements. Both manual and intellectual work were held in honour, and great was the influence exercised by the monks of Lérins throughout the Middle Ages.⁶ It will be sufficient, for this earlier

period, to cite the names of Vincent of Lérins and Salvianus.

Another important influence exercised over the development of monasticism in Gaul during this period was that of Cassian. His works were in reality the first monastic code in Gaul (see above, p. 787^b), and, it may be said, in the whole of the West. He founded the monastery of St. Victor at Marseilles, which became renowned, and other monasteries also.¹

St. Caesarius, bishop of Arles, must also be regarded as one of the principal monastic legislators at this date.² We can only mention the monasteries founded by Leonian in the diocese of Vienne, by St. Theudaire in Isère, in the Isle Barbe, at Condat (St. Claude), and at St. Maurice of Agaune, and by SS. Romanus and Lupicinus in the Jura.³

(c) *Britain, Ireland, the Celts.*—The monastic life was established fairly early among the Celts and Anglo-Saxons, and underwent an extraordinary development among them. Its introduction into Great Britain was due to St. Germanus, bishop of Auxerre, who came to the island in 430 to restore ecclesiastical discipline. In Wales Llan Llud, Llanearvon, Ti-Gwen, and Bangor soon became renowned. Some of the monks from these monasteries—St. Gildas, St. Lunain, St. Paul Aurelian, and St. Samson—established the monastic life in Brittany (Armorica), where it also made great advance.⁴ Monasticism in Ireland has much in common with that of Brittany, to which it seems, in fact, to owe its origin. The name of St. Columba and that of his foundation at Iona stand out conspicuous in its history.⁵ Another saint whose name we must not forget to mention among the Celtic monks, although his chief foundation, Luxeuil, belonged to Gaul, is St. Columban, the rival and namesake of Columba. His Rule, inspired entirely by the principles and traditions of Irish monasticism, spread rapidly in Gaul and disputed for a time the predominance of that of St. Benedict.⁶

(d) *Spain.*—In Spain the beginnings of the monastic life are somewhat obscure. The Council of Elvira (c. 300) makes no allusion whatever to either ascetics or virgins. The *Peregrinatio Etherie* belongs to the last quarter of the 4th century. It is the account of her journeying in the East and her pilgrimages to the holy places, sent to her nuns in Spain by a Spanish virgin named Etheria, or Egeria, who was, in all probability, abbess of the community to which she writes.⁷ We find further traces of the ascetic and monastic life among the Priscillianists of Spain, in this century. Priscillian gave himself out as an example of asceticism (see art. PRISCILLIANISM). It has

recently been shown that the *Regula Consensoria Monachorum*, attributed at first to St. Augustine, then to a contemporary of St. Fructuosus, probably comes from a Priscillianist source, in the 5th century. It is a Rule for cenobites, original in character.¹

The Rule of St. Isidore († 636) and that of St. Fructuosus of Braga (c. 660) also deserve mention. They enjoyed considerable success until the advent of the Rule of St. Benedict in Spain, which became there, as in almost the whole of the Western world, the only Rule for monks.²

Vigilantius, who represents the element hostile to the monks and ascetics, was a priest at Barcelona in 396. During the year 409 the invasions in Spain, as everywhere else, resulted in the destruction of the monasteries. Mention of this is to be found in the chronicles of the period.³

The Council of Tarragona, in 516, turned its attention to the monks.⁴ St. Martin, abbot of Dumio near Braga, who is known as St. Martin of Braga, and who had been a monk in Palestine and played so important a part in the history of the conversion of the Suevi, laboured at the restoration of the monastic life in Spain.⁵

Two other bishops, SS. Leander and Isidore, also worked for the same end. The first wrote a Rule for the use of virgins, and the second drew up a Rule for monks.⁶ The latter was already known to St. Leander, the friend of St. Gregory the Great, and to Tajo, bishop of Saragossa (c. 650), the great admirer of the works of St. Gregory and of his *Dialogues*, in which the praises of St. Benedict are set forth. This bishop did much to spread the knowledge of these works in Spain.⁷ Besides these names, we find, between the date of the conversion of Visigothic Spain (587) and that of the Arab invasion (711), those of certain monks and hermits—the African Donatus, who, along with 70 monks, also from Africa, took refuge in the monastery of Servitanum, in the province of Valencia; St. Emilian, who enjoyed a wide-spread cultus in Spain; the hermit, Valerius, in the neighbourhood of Astorga, etc.⁸

(e) *Africa.*—In Africa the first monastic centre seems to have been formed around the person of St. Augustine. This saint had studied the monastic life both in Rome and in Milan, and, on his return to Tagaste, he installed himself with some of his friends in a house, where they gave themselves to the practices of asceticism. Ordained priest, he founded a second monastery at Hippo, where he lived himself till he was made bishop in 396. He then transformed his episcopal dwelling into a monastery like those of the bishops of Milan, Vercelli, and others at this time, and so founded what we may call a 'cathedral monastery,' or, as he himself called it, *monasterium clericorum*. Others of the African episcopate soon followed this

example, and Hadrumetum, Uzala, Calame, Cirta, Mileve, and Carthage became real centres of monastic life. The *Regula pro Monachis* attributed to St. Augustine is not his under this form, as we have already said, but it is drawn from his letter (ccxi.) to religious bodies of both sexes living in poverty and chastity, passing their time in prayer and ascetic practices, and in certain works of charity. The counsels of the great bishop are characterized by the charity, discretion, breadth of mind, and high spirituality to which all his works bear witness.¹ We have already spoken of his famous treatise, *de Opere Monachorum*, composed in the year 400.

The Vandal persecution was unable to destroy all these monasteries, but it arrested for the time the progress of monasticism in Africa. Byzantine rule (533-709) restored peace and liberty, and a true renaissance of religion took place, in which monasticism naturally benefited. Several new monasteries were founded, notably at Ruspe and at Tebessa. The ruins of the latter still exist.² But the Muhammadan invasion was to destroy monastic life in Roman Africa as well as Christian life in general.

(f) On the Danube, in the region of Noricum, we have to mention the wonderful work among those people of St. Severinus († 482), called 'the apostle of Noricum.'³

2. From St. Benedict to the 13th century.—St. Benedict, born at Nursia (c. 480), died at Monte Cassino (c. 540), deserves a place apart in the history of Western monasticism. The influence exercised by his Rule in the West may be compared to that of St. Basil in the East. Having dwelt, at first, as a hermit among the Sabine mountains, he later gathered disciples round him, founded monasteries at Subiaco and Monte Cassino, and wrote a Rule which, after the lapse of two centuries, was to become the one monastic Rule of the West. It may, in fact, be said that the history of Western monasticism is practically identical, for the greater part of the Middle Ages, with that of the Benedictines.⁴ The Rule of St. Benedict, which is divided into 73 chapters, is written for cenobites, and addresses itself exclusively to those who follow that form of monastic life. It teaches the virtues of humility, obedience, and poverty, and enjoins the practice of silence, hospitality, and manual work. It regulates the hours for prayer and lays down the order of the psalmody. The monastery forms, as it were, a little city or, better, a complete society provided with all its necessary organs. At the head of all is the abbot, assisted by his provost, or prior, and his seniors, while at the head of every 10 monks is the dean. Then there are the cellarer, who is charged with the temporal affairs of the monastery, and the various other officials that divide between them the different functions necessary to the well-being of the house. The monastery should, as far as possible, provide for itself and possess a garden, a mill, and

all the necessary offices and work-shops. The sick, too, are to be specially taken care of, and the monks and the *oblats* receive necessary instruction. Guests are to be received with honour. Those who offend against the Rule must receive punishment according to their deserts.¹ Such is, in summary, the Rule of St. Benedict—a Rule characterized by great simplicity, but in which is clearly reflected that spirit of wise discretion and justice which was the genius of the Roman character, while at the same time it is penetrated through and through by the purest spirit of Christian asceticism, and rivals in its discretion and its sublimity of view the Rule of St. Basil itself.

St. Gregory († 604), the greatest of all the popes of the early Middle Ages, in giving to this Rule the support of his authority and in recounting, in his *Dialogues*, the life and miracles of its author, assured its predominance over all other monastic Rules. He himself founded a monastery in his own house (the Monastery of St. Andrew, on the Cœlian), in which the Rule of St. Benedict was observed, and sent to England one of its monks, his disciple St. Augustine, who, while commencing the work of converting the Anglo-Saxons, at the same time implanted in their midst that Rule which was destined to take such firm root there and to spread far and wide over the land.

(a) *England*.—The Christianity established by St. Augustine among the Anglo-Saxons was thoroughly monastic in character. In the greater number of towns—e.g., at Canterbury, York, London, Ripon, Peterborough, etc.—the monastery was the centre of the new Christianity. The church of the monastery became the cathedral, and the abbot the bishop of the diocese that was thus gradually formed. The kingdoms of the Saxon heptarchy were one after another converted by the disciples or successors of St. Augustine, and the history of the four centuries extending from the death of St. Augustine in 605 to the Norman Conquest in 1066 is one of the finest parts of the history of Western monasticism.² It would be impossible to give even a summary of it here. We cannot do more than cite some of the principal characters and the names of the chief monasteries that stand out in its pages. Among the former we have the abbots and monks Aidan, Oswald, Wilfrid, Theodore, Cuthbert, Benedict Biscop, Aldhelm, Boniface, Bede, Alcuin, Odo, Dunstan; among the latter are Canterbury, Westminster, Malmesbury, York, Lindisfarne, Ripon, Peterborough, Jarrow, Wearmouth, Croyland, Whitby, Coldingham, Tyne-mouth, and Hartlepool. Even after the Norman Conquest in 1066 the history of monasticism in England does not come to an end. It was still flourishing in the 11th cent., and the Normans, far from destroying the English monasteries, founded new ones. Lanfranc and Anselm, archbishops of Canterbury, re-peopled the Saxon monasteries with colonies of monks brought over from the famous abbey of Bec and from other Norman monasteries. Cluny, too, made several foundations in the country, and the Cistercians, in their turn, established themselves at Waverley, Rievaulx, Fountains, and many other places. St. Stephen Harding, who exercised so great an influence on the order of Cîteaux and gave it its organization, was an Englishman. The order

² It is to this history of the Anglo-Saxon and Celtic monks that Montalembert has consecrated the greater part of his history of the monks of the West; see also W. Dugdale, *Monasticon Anglicanum*, new ed., London, 1817-30; E. L. Taunton, *The English Black Monks of St. Benedict*, 2 vols., do. 1897; F. A. Gasquet, *English Monastic Life*, do. 1904.

of Savigny, which also had numerous foundations in England, was absorbed by that of Cîteaux. But with the 14th and 15th centuries English monasticism began to decline.¹

(b) *France*.—However great the success of the Benedictine life in England, it may be said with truth, if its history be regarded as a whole, that France was the land of its predilection. The story of the Rule of St. Benedict being brought to Merovingian Gaul by his disciple, St. Maurus, and of the latter's foundation of the abbey of Glanfeuil on the banks of the Loire as the first Benedictine monastery in that country, has been contested.² Whatever the truth of this question may be, it is certain that the Rule was introduced into France at an early date—from the beginning of the 7th cent.—and it spread there with such rapidity that it soon succeeded in supplanting the Rule of St. Columban and in imposing its authority on all the monasteries. A synod held at Autun, in 670, speaks of it as though it were the only monastic Rule in existence, and that of Châlons, in 813, declares formally that it is followed in almost all the monasteries of the country.³ The movement attained its apogee under Charlemagne, the great protector of the Benedictine monks, and under his son, Louis le Débonnaire. The reform of St. Benedict of Aniane witnesses at once to the unity and to the vitality of Benedictine life.

It is again in France that we must seek the origin of the important monastic reform of which Cluny was the cradle, and which, little by little, spread beyond the limits of France into Italy, Spain, England, Germany, and Poland. The abbey of Cluny, near Macon, was founded by William, Duke of Aquitaine, in 910; the monks were brought from the abbey of Baume, where the Constitutions of St. Benedict of Aniane were followed; hence the Cluniac reform sprang from that of the 9th century. Its first abbots, Bernon, Odo, Mayeul, Hugh, Odilo, and Peter the Venerable, raised Cluny to the highest degree of prosperity and extended its influence to every country in Christian Europe. The work of Cluny, in the religious, social, and political order, was considerable; during the 10th, 11th, and a part of the 12th centuries it exercised an unrivalled influence on Christian morals and institutions. From the political and religious points of view, it offered to the popes valuable and indispensable assistance in their struggle against the emperors of Germany, and the latter, as well as the kings of France, were obliged, more than once, to reckon with the powerful abbey.

Among the monasteries that accepted the Cluniac reform and flourished under it must be cited especially the great abbeys of Moissac, St. Martial, Uzerches, St. Jean d'Angély, St. Bertin, St. Germain d'Auxerre, and Vézelay in France, and Cava, Farfa, and S. Paolo fuori le mura in Italy.⁴

At the very moment when the influence of Cluny began to decline, a new star arose on the monastic

horizon. On 21st March 1098, Robert, abbot of Molesmes, founded in the diocese of Dijon the abbey of Cîteaux, which was to become the centre of a new reform of Benedictine life. While Cluny, although careful to remain faithful to the spirit of St. Benedict, had become the seat of culture, of the liberal arts, and of letters, and had exercised considerable influence on the external world, Cîteaux, under the inspiration especially of St. Bernard, returned to an austerer conception of the monastic life. All sumptuousness and solemnity, even in the liturgical offices, were proscribed, monastic architecture was reduced to its simplest expression, and intellectual and artistic culture was set on one side, manual labour and the exercise of every kind of hard work taking its place.⁵

The Cistercian reform, whose influence, while not to be compared with that of Cluny, was nevertheless of considerable importance, especially during the 12th cent., spread beyond France and took in a large number of monasteries in other countries. It continued to exercise its influence till the end of the Middle Ages, and was revived on a new basis in the 17th cent. in the celebrated reform of La Trappe under the Abbé de Rancé.⁶

(c) *Germany*.—Before the introduction of the Benedictine Rule into Germany, monastic life was but feebly represented in that country. The Anglo-Saxon monks, SS. Pirmin and Boniface, with their disciples, brought to Germany, along with their missionary zeal, the traditions of Benedictine life, which scarcely existed there at that period, the only known trace during the 6th cent. being found in the life of St. Eusebius.⁷

During the 7th and 8th centuries the Celtic monks of St. Columban came into Germany and founded a number of monasteries. Among these we may mention St. Gall, Ebersmünster, Mosen, Montier, St. Odile, Honau (Onogria), and Aschaffenburg, not to speak of those at Strassburg, Mainz, Cologne, Ratisbon, Würzburg, Erfurt, and Heggbach.⁸

In 1185 all the Scottish monasteries of Germany were united to form a congregation, under the jurisdiction of the abbot of St. James of Ratisbon, by Innocent III. Gradually the numbers of Scottish monks that were at first continually coming into Germany began to diminish, and by the 15th cent. they were replaced, in most of the monasteries, by Germans. This congregation ended by entering that of Bursfeld and becoming one with it. Mention, however, is made in the 17th cent. of a Scottish abbot, Ogilvie by name († 1646).

Reichenau on Lake Constance began, in 724, a history glorious in monastic annals, and Murbach, Frittlar, Hersfeld, Heidenheim, and Bischofsheim are scarcely less famous. Fulda, in the days of its prosperity, counted 100 monks among its inmates and became a nursing-ground for missionaries, of whom the chief were to play an important part in the history of Christian Germany. Such were Sturm, Willibald, Wunibald, and also SS. Walburga, Lioba, and Thekla. Synods held in Germany in 744 and 745 discussed monastic affairs and prescribed that all monks were to live according to the Rule of St. Benedict. Worthy of special

mention in this connexion is the Synod of Aix-la-Chapelle in 802, famous for the legislation which it laid down for the monks. Under Dukes Ottilo and Tassilo, no fewer than 29 cloisters were founded, some of which have left a name behind them in history—e.g., Tegernsee, Benediktbeuern, Polling, Wessobrunn, Kremsmünster, Scharnitz, and Metten.

Charlemagne and Louis the Pious were the great protectors of the Benedictine monks. At their courts were to be seen Alcuin, Adalhard, Wala, Angilram, Arn, Ansegise, Paul the Deacon, and, above all, Benedict of Aniane, the great monastic reformer. The Cluniac reform found its way also to Germany, where it commenced a new era of activity and prosperity for the monastic life. The monasteries of Reichenau, St. Maximin of Trèves, Echternach, St. Emmeran of Ratisbon, Tegernsee, St. Maurice of Magdeburg, and Weissenburg flourished anew under its protection. Einsiedeln, whose patron was St. Meinrad, a hermit who died in 861, became likewise the centre of an important monastic reform,¹ which extended to the abbeys of Petershausen, Disentis, Pfaffers, St. Blaise and Muri, Hohentwiel, Kempten, Ebersberg, and Rheinau (near Schaffhausen). The monastery of St. Emmeran of Ratisbon in its turn introduced its own customs into the monasteries of St. Peter of Salzburg, Tegernsee, Prüll, Weltenburg, and several others. Ulrich of Ratisbon (or of Cluny, † 1093) was one of the most active agents in the Cluniac movement in Germany and Switzerland.

Hirsau, or Hirschau, founded about 830, was also of great importance from the monastic point of view. The constitutions of this monastery were adopted by 150 other monasteries. Hirschau, as well as Cluny, offered valuable assistance to St. Gregory VII. in his struggle against investitures and against the abuses among the clergy. Like the great Burgundian abbey, it also had much influence on art, architecture, and culture in general. The reform of Hirschau, while keeping its own spirit intact, was, to a large extent, inspired by that of Cluny. The annals of the abbey were written by Trithemius and Basilius.²

Another reform, which, like that of Hirschau, drew much of its inspiration from Cluny, while keeping certain special characteristics of its own, made itself felt not only in Italy, the land of its birth, but in Germany also. This was the reform inaugurated by the monastery of Fructuaria (Früdele), near Turin, founded in 1003. Its constitutions were adopted by many Italian monasteries and in Germany, notably by the monasteries of Gorze, St. Maximin of Trèves, St. Blaise, in the Black Forest, and by Muri, Garsten, Gottweig, Lambach, etc.³

Besides these reforms issuing from within the monastic order itself, mention must be made of the efforts made by ecclesiastical councils to bring back the monasteries to the practice and observance of the Rule. In particular may be cited the Synod of Rouen (1074), and those of Poitiers (1078), Rome (1083), London (1112), and Paris (1212-13). The decrees of the last council, which received the approbation of Innocent III., exercised a great influence on the monastic order as a whole. The 4th Council of the Lateran (1215) established rules that are still in force at the present day, especially as regards the convoking of general chapters—a

kind of monastic council, composed of abbots and delegates from the various monasteries, wherein are discussed matters relating to the discipline and general interests of the monastic life.⁴

3. From the 13th to the 20th century.—In the 13th cent., whilst monasticism, in spite of all these attempts at reform, continued to decline, new forms of the religious life arose which answered better perhaps to the spirit of the age, but which none the less drew numerous souls athirst for perfection and formed a current which, although not actually inimical to the ancient monastic institutions, was nevertheless very distinct from it. Such were the great Dominican and Franciscan orders and a few other religious families inspired with the same principles. No other attempt at monasticism that was really original and powerful remains to be considered, with the possible exception of the congregation of St. Maur. Hence it will be sufficient to give a brief outline of the principal characteristics of monastic history during the last centuries of the Middle Ages.

The great schism of the West and the Hundred Years' War dealt another terrible blow to the monastic orders, but the attempts at reformation were not less numerous than in the preceding centuries. The Council of Constance (1414-18) consecrated some of its decrees to the reformation of the Benedictine order, and was the factor that inspired a great meeting, comprising 131 abbots of various monasteries, which was held at Petershausen in 1417. In 1418 Pope Martin V. sent the abbot of Subiaco, Nicholas Seyringer, to Melk, the great Austrian abbey, to lay the foundation of that restoration of monastic life. The enterprise was successful, and a great number of the monasteries of Austria, Bavaria, and Swabia rallied to the movement—*inter alia*, Mariazell, Seitenstetten, St. Peter of Salzburg, Kremsmünster, St. Emmeran of Ratisbon, Braunau, Tegernsee. The great Italian abbots of Subiaco and Farfa also accepted this reformation. In other respects all these monasteries remained independent and did not form a real congregation.⁵

The Council of Trent dealt with the question of monasteries as it did with all other Christian institutions. The 25th Session (3rd Dec. 1563) treats *de regularibus et monialibus*, renews the decree of Innocent III. and of the 4th Lateran Council, unites the exempt monasteries to form congregations, institutes, general chapters, and cloisters, and legislates concerning visitors, presidents of congregations, novices, and the election of superiors and nuns; in a word, it establishes a collection of rules and laws concerning the monastic life.⁶ Congregations were immediately after founded on those principles.⁷

Even more important than the Melk reformation, so far at least as Germany is concerned, was that of Bursfeld. Founded in 1003 on the banks of the Weser and colonized by Corby, this abbey was destined to play an important part in monastic history from the 15th century. John

¹ We have already seen that, even as far back as the time of St. Pachomius, the endeavour was made to unite monasteries in a species of federation; another example of this occurs in the 9th cent., under the authority of St. Benedict of Aniane. But it is not, in reality, till the 11th cent. that we find among the Cistercians the usage of general chapters properly so called. From the Cistercians the practice passed to the Benedictines, and from them to other orders (cf. Berlière, 'Les Chapitres généraux', in *Mélanges d'hist. bénédictine*, 4th ser., Maredsous, 1902, p. 52 ff., and Heimbucher, i. 274 f.).

Dederoth († 1439), who had already reformed the abbey of Clus, took Bursfeld in hand in 1433 and also Rheinhausen. The three monasteries remained closely united. In 1446 the abbot of Bursfeld became the president of the congregation. The constitutions show a solid organization, with general chapters, visitors, and every means of safeguarding the observance of piety and regularity. The success of this reformation grew from day to day. The cardinal of Cusa,¹ Nicholas V., and Pius II. became its ardent promoters. At the death of Abbot Johann von Hagen (1469) the congregation numbered 36 monasteries, which later increased to 230. In 1579 the abbey of Bursfeld, which up to this time had been the head-house of the congregation, went over to Protestantism under the influence of Julius of Brunswick, and the congregation was itself secularized in 1803.²

We have already spoken of the monastic origins in Spain. For a long time the Rule of St. Isidore was observed in that country, side by side with that of St. Benedict. The Synod of Coyaca (1050) prescribed that either the Rule of St. Isidore or that of St. Benedict should be observed in all monasteries in Spain. Not many years later, however, the influence of Cluny began to be felt and to spread throughout Spain; gradually it predominated, until it finally eliminated the observance instituted by St. Isidore. In the 14th and 15th centuries two important congregations rose up, those of Valladolid (1390) and Monserrat (1492). The latter made foundations in Portugal, Peru, and Mexico.³ The movement of the claustrales at Saragossa and at Tarragona were less important.⁴

The Low Countries were a monastic land for centuries. Wilfrid of York, on the occasion of a journey to Rome in 678, having been thrown on the shores of Friesland, was there welcomed with great warmth. After his return to his monastery at Ripon, he sent over Willibrod, one of his monks, who established himself at Utrecht, and became the great apostle of Friesland, having St. Boniface as a fellow-labourer for some time. Other missionaries soon came from Iona, and, like England, the country became Christian and monastic at the same time. The most celebrated of these foundations was the monastery of Echternach.⁵

The Reformation in Germany in the 16th cent. led to the expulsion of the monks from their monasteries, the closing of monastic buildings, and the handing over of their revenues to laymen, and especially to Protestant princes. A great number were sacked. It has been calculated that in the Peasant War more than 1000 monasteries and castles were destroyed. A few monasteries were, however, saved from the general ruin (cf. Heimbucher, I. 295).

In England the effects of the Protestant Reformation were still more terrible for the monasteries. In 1524 the Holy See had caused Cardinal Wolsey to make a visitation of the monasteries, and one of the consequences of this general visit was their confiscation and almost complete secularization by Henry VIII. and his minister Thomas Cromwell (1534). Elizabeth finished the work of destruction in 1560. Scotland's turn came later on (1559-

1560). In all it has been estimated that 578 monasteries, of which 63 were Benedictine, were confiscated. Besides the falls and lamentable defections there were not wanting monks who became martyrs, and who paid with their lives their fidelity to their vows.¹ Benedictine life was maintained throughout all these centuries of persecution, and the Anglo-Benedictine congregation has preserved the inheritance of its ancestors to the present day.

The Reformation which destroyed the monasteries in England and Germany did not succeed in establishing itself in France. There the monasteries held out. The 17th cent. was marked by an important monastic restoration, the Benedictine congregation of SS. Vannes and Hydulphus in Lorraine and that of St. Maur in France. These two congregations, with an end and a constitution that were similar, had for their common object to re-establish a stricter mode of observance in Benedictine monasteries and to bring back the monks to the rigorous practices of the Benedictine Rule. The very large part played by the congregation of St. Maur in intellectual work bore splendid fruits and helped to found a school of erudition that has given to France a Mabillon and a Montfaucon, a Denys de Sainte-Marthe, a d'Achéry, a Constant, a Ruinart, etc.—a school that has never been equalled.²

A certain number of new orders which practised the monastic life and accepted the Rule of St. Benedict as their fundamental guide may be regarded as branches of the Benedictine order. We can give only a very brief outline of their history here.

(a) *Sylvestrines*.—The first of these orders sprung from the Benedictine trunk is the Sylvestrines, so called from the name of its founder, Sylvester Gonzelin, of the family of Gozzolini († 1267). In 1227 he retired to Osimo and followed the Rule of St. Benedict, adding new austerities, until in a short time a few ancient monasteries took their place under the new discipline. At the time of its greatest prosperity it comprised 56 monasteries, the greater part of which were in Italy and a few in Portugal and Brazil. At the present day this number is greatly diminished. The church of St. Stephen del Cacco in Rome now belongs to them.

(b) *Celestines*.—The Celestines are a more important branch than the Sylvestrines. They owe their foundation to the pope of that name, St. Celestine V., who at first was a hermit on Monte Morone in the Abruzzi, and then at Mt. Majella. He endeavoured to combine under one manner of life the cenobitic principle of the Benedictines and the practices of the anchoritic life. When he became pope, he protected and favoured the order which he had founded, approved of its constitutions, and accorded it many privileges. His congregation, having made numerous foundations in Italy, spread into France, Saxony, Bohemia, and the Low Countries. It possessed 150 monasteries, of which 96 were in Italy and 21 in France.³

(c) *Olivetans*.—The Olivetans were founded by Bernard Tolomei († 1348), a professor of Law at Siena, who, in company with a few companions, retired to Mount Oliveto, some leagues from Siena,

whence his congregation takes its name. They lived as hermits, while following the Rule of St. Benedict in so far as its main principles are concerned. Pope John XXII. gave his approbation to their constitutions. Fourteen years after its foundation more than 100 monasteries, including Monte Cassino, had rallied to this mode of life. Their principal monasteries were those of San Miniato in Florence, and Settignano and S. Francesco Romana at Rome. Among their members are counted 4 cardinals, 5 archbishops, 30 bishops, and a few savants, such as Lancelotti, Bianchieri, etc.¹

(d) *Humiliati, Pulsano, and Monte Vergine*.—Three other orders or congregations—the Humiliati, Pulsano, and Monte Vergine—are also offshoots in Italy of the Benedictine tree. The first was founded in the 12th cent., with the aid of St. Bernard, by St. John Oldrado († 1159) near Cosmo, but later they joined the partisan demagogues of Arnold of Brescia and then the Waldenses. St. Charles Borromeo made a futile attempt to reform them; the rebel monks tried to get rid of the saint by endeavouring to bring about his death, and were consequently suppressed by St. Pius V. in 1571.² The order of Pulsano, which never made any great progress, was founded in Apulia by St. John de Matera († 1139).³ That of the Guilhelmites, or hermit Benedictines of Monte Vergine, was founded by a friend of St. John de Matera—St. William (Lat. Guilielmus) of Vercelli († 1142), who had at first lived as a hermit on Monte Vergine, in the neighbourhood of Naples. He had a certain number of followers, and built several other monasteries in Italy and even as far off as Sicily. The monastery of Monte Vergine became and has remained the centre of a very flourishing pilgrimage.⁴

(e) *Fontavellane*.—Among the reforms in the Benedictine order we must not omit to mention that of Fontavellane under the inspiration of Dominic of Foligno († 1031) at Faenza in Umbria. St. Peter Damian († 1072) was its most powerful and most fervent promoter, and St. Dominic le Cuirassé ('the armoured') is also one of its glories. Its Rule added new austerities to those of St. Benedict's. In 1570 it was united to the Camaldolese.⁵

(f) *Camaldolese*.—This was one of the most numerous and most powerful of the congregations of the Benedictine order. They essayed to combine the cenobitic with the anchoritic mode of life. At one time they numbered 2000 monks, and their history is intermingled with the most important events of the Church in Italy in the 11th century. Their founder was St. Romuald († 1027), who was at first abbot of San Apollinare in Classe at Ravenna, and withdrew thence to Campo Maldoli (whence the name 'Camaldoli' or 'Camaldolese') in the Apennines with a colony of hermits.⁶

(g) *Vallombrosa*.—The order of Vallombrosa was founded by St. John Gualbert († 1073) at Vallombrosa in Tuscany. The founder, who was not ignorant of the attempt of the Camaldolese, also took up the idea of uniting the anchoritic life with the cenobitic mode, basing his plan on the Rule of

St. Benedict. This congregation, like that of the Camaldolese, also played an important part under Leo IX. and St. Gregory VII. in the reformation of the Church in its fight against simony.¹

(h) *Grammont and Fontevault*.—France, which, in Cluny and Cîteaux, had given birth to the two most illustrious reformations of the Benedictine order, has still two more interesting attempts to its credit, although of much less importance—the order of Grammont and that of Fontevault. The first resembles the Camaldolese order. Its founder, St. Stephen of Muret, near Limoges († 1142), where he lived a very mortified life, withdrew to Grandmont, or Grammont, a place which was at that time a desert in the same country. His order was more or less of a success in France, and at one time numbered about 60 monasteries.² Fontevault (*Fons Ebraaldi*), in the Department of Maine-et-Loire, gave its name to the order founded by Robert d'Arbrissel, who renewed an ancient institution, namely, that of double monasteries.³ The founder's influence as a missionary and preacher was enormous, and at his death 3000 monks and nuns were united under his guidance. His Rule spread to England and Spain, but Fontevault remained the principal house. The most rigorous discipline maintained the spirit of St. Robert in the monasteries thus brought together.⁴

There were also a few partial reformations that arose in certain great abbeys which we might call monastic capitals, Chaise-Dieu, L'Abbaye de Cluse, Sasso-Bigno, Sauve Majour, Le Bec, Thiron, Savigny, Saint-Sulpice, and Cadouin.⁵

(i) *Mechitarists*.—The Mechitarists represented one of the most curious attempts at reform in the Benedictine order. Mechitar (Mechithar or Mekhitar, † 1749) was an Armenian who, with the object of enlightening his fellow-countrymen concerning the Roman Catholic Church, resolved to found an order consecrated to the work of the mission and the education of youth and the composition or the translation of Catholic works. In Armenia he was subjected to long persecutions on the part of the schismatics, but, far from being discouraged, he succeeded in founding his congregation in Armenia. His most celebrated foundation, however, was in the island of St. Lazarus, near Venice; it became a very active centre for Armenian studies. The monastery of Vienna, founded in 1810, is also celebrated for its printing-press and its seminary.

(j) *Carthusians*.—The Carthusians, like the Camaldolese, represent a mixture of the anchoritic and the eremitic modes of life in Western monasticism. St. Bruno, their founder, withdrew to the desert of the Chartreuse (whence the name 'Carthusian') in the diocese of Grenoble, France, where he established a little colony of hermits, whose successors have succeeded in keeping together and maintaining their traditions down to the present day. A great number of foundations were made throughout all the nations of Europe. In a Carthusian monastery each monk lives in his own cell and cultivates his little garden. They come together only for divine office in choir, for conference, or for chapter, and on certain days they meet in the common refectory and for the weekly walk. They have always been noted for their fervour,

and among them there have been a few ascetic writers of high merit. Some of their chapter-houses are celebrated for their architectural beauty and for the art treasures which they contain.¹

The 19th cent. was one of restoration for monasticism. While in England, Germany, Austria, and Italy the ancient monastic congregations and the great abbeys were maintained in spite of all difficulties, some attempts at monastic restoration were made in France, Italy, Switzerland, Germany, and America. It will suffice to refer the reader to the article 'Benedictine Order,' in *CE* ii. 443-465, for a fuller account of these attempts (cf. Heimbucher, i. 600).

V. *CONCLUSION.*—In an article that must necessarily be brief, we have been able to give only a very short summary or historical outline. To give it any degree of completeness one should study in detail the influence exercised by the monks on the Church and on society in general; consider what has been their work of sanctification, of charity, of apostleship; enumerate the services which they have rendered to civilization as savants, litterateurs, artists, agriculturists, and, at times, as politicians. It would then be seen that, although vowed by their monastic profession to a life of retreat and renunciation, which is the kernel of their vocation, the monks have accomplished a work that has been equalled by no other society down to the present day.

If this résumé of monastic history had any pretensions to completeness, some mention should here be made of the nuns, in whose ranks are found characters as remarkable as those of Lioba, Mechthild, Gertrude, Hildegard, Roswitha, and others. From the historical point of view, however, this is unnecessary. The nuns brought no new element into the monastic life, but were content to follow in the footsteps of the monks under the influence of the great reformers of the monastic order.

MONASTICISM (Buddhist).—I. The monastic order.—The monastic order in Buddhism, as instituted by Gautama Buddha himself, was not essentially a new creation in India, but was derived from ancient Hindu usage and practice. Separation from the world, in the solitary existence of a hermit or ascetic or in regulated communities, had been almost from time immemorial a characteristic feature of Indian life. In adopting the principle of monastic rule and self-discipline as the basis of his religious system, and defining this as the sole way of religious attainment, the Buddha presented to his

hearers no new doctrine or ideal, but urged and enforced a duty familiar to them from the teaching of their own sacred books. The distinctive feature of the Buddhist order, in which it was differentiated from its predecessors, and to which, in large part at least, it owed its wide extension and success, was the removal of all restrictions of caste. Membership of the order was open to all from the highest to the lowest, without distinction of race or birth. All alike were bound by the vow of poverty, relinquished all personal or individual possession of worldly goods, and sought in meditation and spiritual endeavour that deliverance from the bonds of existence and misery which, the Buddha taught, could never be achieved in the turmoil and distraction of a life in the world. To indicate, therefore, the life of renunciation and strenuous pursuit of the highest aim to which they pledged themselves the monks were known as *bhikkhus*, 'beggars,' *śramaṇas* or *brāhmaṇas*, 'endeavourers,' the latter term being given to the novices or junior monks, and *śhāviras*, 'elders,' to those who were the senior or ruling members in the monasteries. The community of monks as a whole was known as the *Saṅgha*, or order, and with the Buddha himself and the *Dharma*, the sacred rule or law, formed a Buddhist triad, each member of which was idealized and invested with a sacred character, and ultimately became the object of a definite worship.¹ On the sculptures the *Saṅgha* is represented as a man holding a lotus in his hand, the symbol of stainless purity.

In inception and intention the monasteries were not the established homes of the monks. To the latter no permanent abodes were assigned, but they were to follow the wandering life of an ascetic or beggar, dependent for their livelihood upon the gifts of the laity, their only shelter the trees of the forest, or booths constructed of leaves and branches (*parṇasālā*, *pañnasālā*). Only during *Vassa* (*Varṣa*), the season of the rains, when travelling became impracticable or could be prosecuted only at the grave risk of injury to living beings, was it incumbent upon them to remain in a definite place or a permanent building. Caves, either natural or artificially excavated in the rock, seem to have been among the favourite dwelling-places of the early Buddhist monks. Gautama is represented as giving permission for five different kinds of abodes (*pañcha lenāni*): 'I allow you, O Bhikkhus, dwellings of five kinds, vihāras, adḍhaya-yogas, storied dwellings, attics, caves.'² The more elaborate and permanent dwellings were, in the first instance, apparently always the gifts of wealthy laymen, who desired in this way to do honour to Gautama himself or to the order which he had founded. A usual name for the larger monasteries was *saṅghārāma*, the abode or delight of the *Saṅgha*; and the term *vihāra* was employed also to denote the temple where the images were enshrined, in a building which, in the great monasteries at least, was usually distinct from the main hall.

It became necessary, moreover, at an early date to place restrictions upon the absolute freedom of entrance into the order. Such restrictions took the form of the prohibition of admission to those suffering from any mental or bodily defect, as the blind or lame, and to the vicious in habit or life,

¹ Thus in the 'three-refuge formula' which every candidate for admission into the order was required to repeat the *Saṅgha* is personified, and to each in succession the suppliant applies for protection and aid: *Buddham saraṇaṃ gacchāmi*, *Dharmam saraṇaṃ gacchāmi*, *Saṅgham saraṇaṃ gacchāmi*, 'I seek refuge in the Buddha, the Religion, and the Order' (*Mahāv.* i. 12. 4).

² *Chullav.* vi. 1. 2; *SBE* xx. 158; cf. *Mahāv.* i. 80. 4, where these are termed 'extra allowances'; *adḍhaya* is explained by the commentator to mean a gold-coloured Bengali house.

Le Cousteux, *Annales Ordinis Cartusienensis*, new ed., 8 vols., Neuville-sous-Montreuil, 1888-91; on the bibliography of the Carthusians cf. Chevalier, *Répertoire: Topo-bibliographie*, s.v. 'Chartreux'.

gamblers and those involved in debt.¹ The consent of parents also was required in the case of a minor. No distinction or priority of caste, however, was ever recognized in Buddhism, although it seems to have been true that the earliest converts were for the most part Brāhmins. Inasmuch as in and through the order alone was final deliverance to be attained, it was an essential feature of the Buddha's gospel that no accident of birth should hinder a man from entering upon and prosecuting the path that led to salvation, to *nirvāṇa*. It was impossible for the layman to work out his own salvation while in the world, fettered by its ordinances and under the spell of its attractions. He must renounce the world and become a monk, that, undistracted and at leisure, he might pursue the highest ends and win for himself final deliverance.

The earliest ceremony of admission to the monastic order appears to have been as simple as possible, and confined to a recital of the 'three-refuge formula,' together with a declaration on the part of the applicant of his desire to become a monk. At first Gautama himself received and admitted all candidates. Later he entrusted this right to the monks themselves, each monk being permitted to ordain one novice. This rule again was found to be too strict, and ultimately the only limit to the number that a monk might himself receive was the condition of efficient oversight.²

On admission the candidate provided himself with the usual almsbowl and the appropriate three vestments (*trichivara*) which constituted almost his sole possessions.³ The colour of the robes seems to have been originally dull red or reddish-yellow, as worn by most of the Hindu ascetics, but varies at the present time in different countries; in the south it is usually yellow. They were to be made in patches or torn pieces, like the rice-fields of Magadha.⁴ Besides the almsbowl the ordained monk carried also with him a staff, a razor and tooth-pick, and a water-strainer, the last in order to ensure that no living creature should inadvertently be destroyed by him when drinking. The use of the rosary in addition was a practice of later origin. Frequently the robes were the gift to the Buddha or his disciples of wealthy laymen, who sought to secure merit for themselves by generosity to the order.

Upon converts from other sects who came desiring to receive *upasampadā* a probation (*parivāsa*, 'sojourn,' 'delay') of four months was imposed. Fire-worshippers and Jātīlas (wearing the *jaṭā*, i.e. with matted hair), however, were to be accepted forthwith, on the ground of their orthodox belief; Śākya also, because of their kinship with the Buddha.⁵

The daily routine of monastic life admitted of little variation. The day began early with recitation and prayers, followed by the regular round for alms. Silently and with downcast eyes the monks moved in procession and presented themselves before the householders' doors, to receive whatever food might be placed in their bowls. For this they were not allowed to make request, as the Brāhman students and ascetics were accustomed to do. Whatever was bestowed they were to accept with gratitude; if no gift were offered, they were to pass on to another house without showing resentment. On their return a simple noon-day meal was followed by rest and meditation, the day closing with service and recitations in the temple or hall of the monastery. In most of the

monasteries regular instruction was given to the *śrāmaṇeras*, or junior monks, and an elementary education was thus available for the entire male population. There were no public services, however, within the monasteries, nor any worship in the usual sense of the term. Only in *Vassa* did the monks ordinarily engage in preaching, or place themselves at the service of the laity for the reading of the Scriptures or prayer. Twice a month at the new and full moons on the *uposatha* days, the days of abstinence and fasting, the *pratimokṣa*,¹ or confession of sin, was to be formally recited at a full chapter of the monks. Later a weekly recitation was instituted, which included the intermediary days, on the seventh and twenty-first of the lunar month.²

In intention and practice, therefore, the Saṅgha formed a brotherhood, within which no distinction was made of rank or birth; age, learning, and seniority formed the only title to authority and respect. The control of the monasteries was in the hands of the *sthaviras*, the elders or senior monks. The *upādhyāyas* or *ācāryas* were ordained members of the fraternity, of some years' standing, qualified by character and learning to give instruction and to conduct the recitations and prayers. The novices or junior monks were required to devote themselves to study, to perform the necessary services of the monastery buildings, to wait upon the senior monks, and sometimes to attend them when they moved abroad. All alike pledged themselves to obey the rules and discipline of the order. There were, however, no irrevocable vows. The monk was free at any time without blame to discard his robes and return to the world. In this way in some Buddhist countries the entire male population passed through the monastery schools, and for a longer or shorter period wore the yellow vestments. By his return to the world the monk definitely desisted from his endeavour to secure for himself deliverance from suffering and misery; for only within the order, according to the teaching of the Buddha, was salvation to be attained. Lay brethren also (*upāsaka*, 'worshipper,' 'servant') were admitted to the monastery as labourers and servants, and upon them a less strict discipline and obligation were imposed. Nothing further probably was required of them than to recite the 'three-refuge formula.' They took no part in the regular life of the monastery, did not join in the daily itinerancy for alms, and were in all matters under the direction of the monks. The outside laity also were accustomed to visit the monasteries to make offerings at the shrines.

The rules of extreme poverty incumbent upon the monks individually did not extend to the monasteries in their corporate capacity. These might be and often were powerful and wealthy corporations, possessed of great resources, and wielding a corresponding influence in the neighbouring districts. Their property consisted for the most part of land and the revenues of estates or villages which had been granted to them in perpetuity by wealthy patrons, whose piety and liberality earned its recompense in the merit which thereby accrued to the donor. Gifts in money as well as in kind were frequently bestowed. Sometimes also these donations took the form of the building and furnishing of monasteries for the use of the brethren. Such benefactions are recorded within the lifetime of Gautama himself. He gave his permission for the dedication of the estate and buildings, expressed his pleasure at the meritorious service of his followers, and prophesied of the future good which

¹ *Mahāv.* i. 89-78.

² *Id.* 52, 55. See art. INITIATION (Buddhist).

³ The regulations with regard to clothing appear to have been in part polemical and directed against the Jain ascetics, who went about unclothed.

⁴ *Mahāv.* viii. 12.

⁵ *Id.* i. 28.

¹ Pāli *paṭimokkha*, 'release,' 'liberation.' That the term ordinarily conveyed this meaning there can be no doubt. Its original significance is in dispute (see Kern, pp. 74 and note, 85 ff.).

² Kern, p. 99 f.

would be theirs as a certain reward. In respect, however, of their wealth and resources the monasteries of Buddhist countries differ to a considerable extent. In Ceylon, with the exception of a few that are more influential and renowned, the buildings are small, and shelter few inmates. In Mongolia and Tibet they are large and elaborately furnished and decorated, and frequently occupy imposing positions of great natural beauty. Burma and Siam possess buildings of much architectural merit; and the monasteries and temples of Japan are not excelled for stateliness and charm by any in the whole Buddhist world. The Chinese monasteries have suffered much from neglect and decay, and in many instances have within recent years been altogether abandoned, or diverted to secular purposes.

2. Nuns.—Apparently only with much reluctance did the Buddha consent to the establishment of an order of nuns (*bhikkhunīs*, Pāli *bhikkhūnīs*). The traditional account relates that at the thrice-repeated request of Mahāpajāpatī, Gautama's aunt and nurse, strongly supported by Ānanda, the Buddha gave his permission for women to 'go out from the household life and enter the homeless state under the doctrine and discipline proclaimed by the Tathāgata.' The concession, however, would prove disastrous, so Gautama prophesied, to the prosperity and duration of the faith which he taught; the pure religion and the good law would endure only for five hundred years instead of a thousand. On the same occasion he prescribed the obligations and duties of the *bhikkhūnīs* contained in 'Eight Chief Rules,' to which they were bound in strict obedience. The regulations involved subservience to and dependence upon the order of monks in all respects. A nun even of a hundred years' standing was to rise and respectfully salute even the youngest monk, nor was a nun to venture to admonish a monk, though she must submit to receive admonition from him. Further a nun may not keep *Vassa* in a district in which no monk is resident.¹ It is probable that the ordination of women as *bhikkhūnīs* and the establishment of nunneries are in reality due to a later age than that of the founder of Buddhism. The institution has never become popular or gained a strong hold in any Buddhist country; and the number of the nuns has always been small relatively to the number of monks.

3. India.—The Chinese pilgrims, Fā-Hian, Hiuen-Tsiang, and others, in the 5th and following centuries of the Christian era, found monasticism flourishing in N. India, and the great monasteries with their thousands of learned and studious monks exercised a powerful and attractive influence. They belonged in almost equal proportion to the two great schools of Buddhist doctrine, the Hīnayāna and the Mahāyāna (*q.v.*). In the time, however, of the visit of Hiuen-Tsiang, the most renowned of the Chinese monks (A.D. 629-645), they seem to have been losing ground everywhere to the rival sects of the Brahmins. The most famous Buddhist monastery was that at Nālanda, the modern Barāgāon near Gayā (*q.v.*), a description of which is given by the latter pilgrim.² See, further, art. NALANDA.

4. Ceylon.—In Ceylon the power and influence of the community during the early centuries of the Christian era, under the rule of the native Ceylonese kings, who were enthusiastic Buddhists, attained a high level, and were exercised not only ecclesiastically but also in political affairs. The rulers themselves received *abhiṣeka* (*q.v.*) at the hands of the monks, who not only offered advice and exercised authority in matters of State, but as judges decreed penalties for breaches of the law. On the other

hand, the kings interfered in the maintenance of ecclesiastical discipline, and are themselves said to have taught publicly and expounded the principles of the religion. The most flourishing period of monastic life, when the communities of the monks were most numerous and wealthy, appears to have been from the 2nd cent. B.C. to the 10th cent. after Christ, when the Tamil invaders from S. India began to overrun the northern half of the island, which was then the chief home of religious faith and prosperity, destroying the monasteries and introducing the beliefs and practices of Hinduism. Towards the close of the 12th cent. a brief revival of national religion took place with the re-establishment of national independence under Parākrama the Great († c. A.D. 1197). After the death of the king, however, a decline of national and religious life again set in, during which the monasteries and schools of Buddhism manifested little vigour or initiative, and, although the religious life of the community maintained itself outwardly, it gradually fell to a low level of intelligence and spirituality. Only within the last few years have there been signs of a renewed vitality and interest in the purer doctrines and principles of the faith, and of energy or zeal on behalf of its preservation and extension.

The chief authority for the history of the order in Ceylon is the *Mahāvamsa*, or 'Great Chronicle,' a native record of religious and political events in the island from the introduction of Buddhism by Mahinda (Mahendra), the son, or, according to Hiuen-Tsiang, the younger brother, of Aśoka, at the close of the 3rd or the beginning of the 2nd cent. B.C., to the reign of King Mahāsena in the earlier part of the 4th cent. A.D.¹ There is also a collection of devotional 'songs' or 'psalms' of the monks (*Theragāthā*) contained in the *Sutta-Piṭaka* of the Pāli Scriptures, which throws much light on the thoughts and aspirations of the inmates of the monasteries, and gives on the whole a high conception of their piety and self-denying spirit. A similar collection of *Therigāthā*, 'Songs of the Nuns,' forms part of the same *Piṭaka*.² The defect of the *Mahāvamsa* regarded as an authority, over and above its obvious exaggeration of details and naive acceptance of miraculous traditions intended to glorify the course of Buddhist history, is its partisan character. Written in the interest and from the point of view of the monks of the Mahāvihāra at Anurādhapura, the capital city of N. Ceylon and for many centuries the centre of Buddhist monastic life and enterprise, it takes no account of the development of doctrine or teaching in the two great rival communities of the Abhayagiri and the Jetāvana monasteries, each with an independent life of its own. For a period of more than ten or twelve centuries, to the close of the 12th cent. A.D., when the leading sects were reunited, no record is available of the activities or influence of these two important monastic institutions. Apparently they were protestant in their beliefs and practices as regarded the leading and established church of the Mahāvihāra. To what extent, however, their teaching diverged from the orthodox standard, or their manner of life was nonconformist, we have no means of ascertaining.³

¹ See *Mahāvamsa*, tr. into Eng. by W. Geiger and M. H. Bode, Oxford, 1914, with Introduction and references to other literature. The text of the *Mahāvamsa* was edited and published by Geiger for the PTS in 1908, and an earlier tr. by G. Turnour and L. C. Wijesinha was reprinted at Colombo in 1889.

² The Pāli text of both collections was edited by H. Oldenberg and E. Fiechel, London, 1898. Translations of the *Therigāthā* and *Theragāthā* by C. A. Rhys Davids under the titles of *Psalm of the Early Buddhists, the Sisters*, and *Psalm of the Early Buddhists, the Brethren*, were published at Oxford in 1909 and 1918.

¹ *Chullav.* x. 1; *SBH* xx. 320 ff.

² S. Beal, *Si-yu-ki*, London, 1906, II. 1671, 170 ff.

More recently there has been a recrudescence of sectarian differences in the island. These, however, concern monastic usage and habit rather than belief; and in the latter respect there is little if any variation throughout Ceylon. There are three chief sects, the origin of which appears to have been due in all instances to external initiative and influence; and one of these at least seems to owe its existence to a distinct protest against laxity of demeanour and rule. The earliest and most numerous sect is known as the Siamese, established about the middle of the 18th cent. by a number of monks from Siam, who came to Ceylon to restore, it is said, the true succession which had been lost. About fifty years later a separation took place, apparently on disciplinary, not doctrinal grounds, and the Amarapura sect was founded, its leaders being monks who owed their rank and ordination to the Burmese city. The third and protestant sect, the most recent and numerically the least important, is the Rāmanya or Rangoon. The Siamese is the most wealthy and numerous, including among its followers about half of the monks of the island. Most of the important and popular temples and shrines are in their hands. From ten to fifteen per cent belong to the Rāmanya. These last pledge themselves to a stricter observance of the vow of poverty, and neither individually nor collectively do they own, as do the others, landed property. They follow also a simpler mode of life, and avoid with the greatest scrupulousness all contact with the worship or customs of Hinduism. Outwardly the sects differ in the manner in which the yellow robe is worn; the Siamese leave the right shoulder uncovered, but the Rāmanya and the Amarapura draw the robe over both shoulders. The Rāmanya is most influential in the southern part of the island, the Siamese in the central provinces; but the latter is said to be losing ground to its younger rival.¹

The monasteries of Ceylon are for the most part small, rarely containing more than from ten to twenty monks. The few larger and more important institutions alone, as at Kandy, will accommodate up to forty inmates. In the country districts frequently only two or three monks live together. Recitation, confession, and preaching by the monks take place especially at new and full moon, and on the mid-days intervening; thus four times in the lunar month. More formal services last for ten days or a fortnight without intermission, and are carried out at the expense of wealthy laymen, who by charity to the monks secure merit for themselves. During the three months of *Vassa* (*Was*) the monks leave the monasteries and live in the villages, either in specially constructed sheds or booths or by invitation in the houses of rich laymen, who entertain them generously at their own expense. The rule that in the season of the rains, corresponding in Ceylon to our late summer and autumn, no journeying may be undertaken is interpreted in the sense that no monk may be absent from his village or temporary home for more than six or seven days.²

5. Siam.—Perhaps the most distinctive feature of Siamese monastic rule is the control exercised by the monarch. Otherwise the habit and discipline of the monks are similar to the practice of Ceylon. The king is visitor and patron of the monasteries, and himself nominates the *sangkharat*, or archbishop, the supreme ecclesiastical dignitary of the country. He selects for the office one of the four chief abbots, who are entrusted severally with

¹ See Copleston, ch. xxvii., 'Modern Monastic Life,' where other and minor differences between the sects will be found recorded, A. S. Geden, *Studies in the Religions of the East*, London, 1913, p. 556 ff.

² *Mahāv.* iii. 1 ff.; Copleston, pp. 1291, 2611.

the control of the northern and southern provinces of the kingdom, the general oversight of morals and ritual, and the management of the interests of the wandering monks or ascetics who are unconnected with any of the *wats*, or monasteries. These hermits, who make their home in the jungle, are now few in number, but are said to have been very numerous in former times. The inmates of the monasteries themselves frequently spend a considerable part of the year in journeying from one shrine or sacred place to another. Parties of these pilgrims are known as *phra todong*, and as they file in procession along the roads they form a picturesque element in the country side. Each monk is accompanied by a *sisya*, or attendant, who carries his almsbowl and other utensils, and a portable shelter or tent consisting of a large Chinese umbrella, which is set up in the ground at halting-places and a white cloth thrown over it. There are also a few nuns, known as *chū-sōng*, who live for the most part in huts in the neighbourhood of the monasteries. They are usually women advanced in years who are without relatives to provide for their well-being or maintenance. There are no regular nunneries.

The four chief abbots, together with four coadjutors or assessors, form a sort of Court of Final Appeal in all matters of religious or ecclesiastical administration or discipline. The general control is in the hands of provincial ministers of the Church, who exercise jurisdiction within districts that correspond usually with the civil divisions of the country. The ecclesiastical organization, therefore, is parallel to the civil; and the ruler of the State is supreme over all.

In Siam, as in Burma, the rule obtained that every male member of the nation should at some time in his life take upon himself the monastic vows, and become resident in a monastery. The accepted minimum period of residence was three months; after this the monk was free to return to the life of a layman. Most of the boys also passed through the monastery schools, receiving an elementary education in reading and writing and the fundamental doctrines of Buddhism. The layman retained an attachment to the monastery of which he had been an inmate, and once at least in the twelve months, at the religious celebrations in the autumn at the close of *Was*, brought gifts and new robes for the use of the monks during the coming year. At the more important monasteries in Bangkok the king himself, as head of the Church, goes in procession with much ceremony, bearing rich presents and costly robes for the monks. In all the festivals and numerous public holidays the monks take a considerable if unofficial part, and are the recipients of much attention and many generous gifts. In Siam the obligation of individual and personal poverty is less strictly observed than in most Buddhist countries. In some instances the monastic cells are adorned with books and pictures and furnished with ornaments and other objects of luxury, and the monks may be seen driving about the streets in carriages. The majority, however, live a simple life, and are regular in their duties and apparently sincere in their devotion. The monasteries also frequently derive considerable revenues from land or other endowments granted to them by Government, or from the gifts of private donors.

The routine of life within the monasteries is practically the same as in Burma and elsewhere in the south. The day begins and ends at an early hour. Morning prayers in the *dhāt*, the principal hall or temple of the monastery, before the great gilded image of the Buddha, are followed by the usual early begging round. The food placed in the bowl is received in silence, and eaten

immediately on the return to the monastery. No solid food is taken after mid-day. The intervals in the morning and afternoon are occupied with study and meditation and in giving instruction, in recitation from the sacred books, or in preaching. The usual title of the monk is *phra*, 'saint,' or *telepoin*. The latter name is said to be of Môn origin, signifying 'our Master.' The Japanese term *bonze* is also in use among Europeans.

6. *Burma*.—The monastic life of Burma is in its essential features similar to that of Ceylon. The monastic buildings themselves, however, are on a far more elaborate and costly scale, and the lives of the monks are more strictly ordered and devotional. The monasteries also have been more closely in touch with the laity, both because the monks have mingled freely with the people in their festivals and religious ceremonies and, more especially, on account of the influential position which they have occupied as centres of learning and education. Previous to the establishment of European missionary and Government institutions, which to an increasing extent have supplanted them, every Burmese lad passed through the monastery schools, owed whatever book knowledge he possessed to the teaching of the senior monks, and for a longer or shorter period himself participated as a recognized member of the community in the orderly life of the monastery.¹ Thus, although the majority returned to a secular life and to the pursuit of agriculture or trade, the entire male population of Burma had practical acquaintance with the life of a monk, and knew from within his requirements and aspirations. The system contributed effectively to national unity and strength, and for many centuries made of the Burmese a literate people, even if the standard of attainment was not very high. The boys learnt also respect for their elders and habits of regularity and obedience which served them well in their after careers. See art. *BURMA AND ASSAM* (Buddhism in).

7. *Tibet*.—The distinctive feature of the monasticism of Tibet is its elaborate and gorgeous ritual, recalling in many respects the ceremonial of the Roman Catholic Church. The similarity is due for the most part to the influence of the early Nestorian missionaries, who, while leaving little trace of their doctrinal teaching, succeeded in impressing upon the religious life of the country much of the outward form and observance which had been developed in Western lands and on Christian foundations. But, further, the Lāmaist ritual includes ceremonies of exorcism and magic, accompanied by music, dancing, and dramatic performances, the whole most widely divergent from the spirit and simplicity of primitive Buddhism, the source of which is to be found in the ancient native superstitions and practices of the people, which the Buddhist missionaries from India tolerated either from necessity or of choice, if they did not actually foster them. The monastic communities of Tibet are wealthy and powerful, with large revenues and possessions. The buildings themselves are often of great size, sheltering as many as ten thousand inmates, and are imposing rather from their unrivalled position on the sides or summits of lofty rugged hills than from any architectural excellence. At the other extreme, among the anchorites and hermits has been developed a rigorous and cruel asceticism, which is no less opposed to the true Buddhist spirit, but which is closely allied to and probably derived from the Saivite mysticism and practices of N. India. See art. *LĀMAISM*.

8. *Central Asia*.—That for a considerable period Central Asia was the home of a broad and vigorous Buddhist life has long been known. That life

naturally centred in the monastic communities established in the several cities on the important roads of pilgrimage and traffic that skirted the central desert of sand on the north and south. In the countries, however, that were subjected to Muhammadan invasion and conquest little trace of the faith remains. The Chinese pilgrims repeatedly make mention of monasteries with large numbers of inmates whose zeal and piety excited their admiration;¹ these for the most part if not entirely were adherents of the Mahāyāna school. Their narrative, nevertheless, conveys the impression that the real influence of the faith upon the character or habits of the people beyond the monastery walls was but slight. Recent exploration and excavations have entirely confirmed the record of the Chinese, and suggest a fairly strong and prolonged Buddhist hold upon the country. Ruined *stūpas* are numerous, and bear witness to Buddhist traditions and the presence of Buddhist monks. The monastic buildings themselves would be of less solid construction, and either have perished or are unrecognizable.²

9. *China*.—Of the monastic life of other Buddhist lands which follow the Mahāyāna with more or less concession to native modes of thought and superstitions there is little further that requires notice in a general survey. It will be sufficient to refer to the articles on the several countries. The main character and type have been everywhere preserved, but the details of mode of life and profession have varied greatly with environment and the genius of the people. In China the monks have occupied generally a degraded position, with a few honourable exceptions, holding a creed and practising a ritual in which there was more of sorcery and magic than of Buddhist faith. The exceptions were the highland monasteries, and those remote from the centres of population, where the monks, though ignorant, were simple, kindly, and pious, seeking salvation through self-denial and right living. The nuns were no less degraded and for the most part despised. Recent events in China, however, with the diversion of numerous temples and monasteries to educational purposes, the desertion or destruction of others, and the spread of Western influence and science, have entirely changed the situation as far as the religious life and thought of the people are concerned. It is not easy to forecast what the ultimate effect upon Buddhism will be, or how far it will modify or even destroy so essential and characteristic a feature of the Buddhist faith as monasticism has ever been. That the effect will be profound and far-reaching there can be no doubt.³

10. *Korea*.—The monastic institutions of Korea resemble those of China, whence both doctrine and practice have been derived. Religiously as in other respects the country has always been dependent on its greater neighbour to the south, and neither in belief nor in rule of life does Korean Buddhism present much that is novel or of interest. Overshadowed by Confucianism and ancestor-worship, it has developed few distinctive features, and has for some centuries exercised a decreasing influence on the thought and habits of the people.

¹ e.g. Kashgar, Beal, II. 806 f.; Khotan, ib. 809 ff., Fa-Hian, ch. III. (Legge, p. 16 ff.); Yarkand, Beal, II. 807 f.; Sarikol, ib. 298 ff.

² Cf. M. A. Stein, *Ancient Khotan*, 2 vols., Oxford, 1907, *passim*, and *Ruins of Desert Cathay*, 2 vols., London, 1912; art. by L. Giles, J. Pelliot, and others, in *J.R.A.S.*, 1914, etc. Stein found that the memory of the Chinese Buddhist pilgrim Hsuen Tsiang, is still retained at the 'Halls of the Thousand Buddhas,' in the west of the province of Kansu, and elsewhere in Central Asia to the present day. The tradition of his learning and devotion, and of the miraculous powers with which he was credited, proved to be a real power in the minds of the priesthood.

¹ See art. *EDUCATION* (Buddhist), vol. v. p. 177 ff.

The monasteries are usually small, the number of inmates rarely exceeding twenty-five or thirty, and sometimes, as in Ceylon, no more than three or four monks are found living together. The more important institutions are grouped around the capital, but none are allowed within its walls. Their numbers also are decreasing. The monks themselves command little respect, and are drawn, for the most part, as in China, from the lower classes. The example and influence of Japan also may perhaps be traced in the character of some of the buildings, which are fortified and built on high ground to dominate the country at their base. In the neighbourhood of Seoul a few nunneries exist.

The most distinctive feature of Korean monasteries is the presence of pictures on the walls. These are drawn and coloured on paper and mounted on silk, and usually represent scenes from the lives of the Buddha. Often the entire surface of the interior walls is thus hung with pictures, presenting a remarkable contrast to the monasteries of other lands. Externally the walls are covered with paintings in bright colours of *bodhisattvas* or other supernatural beings. The sanctuaries often contain only a single image, rarely more than two or three; and these are small, and for the most part of clay or wood. Metal images are almost if not entirely unknown.

In their dress the monks have preserved the national costume in the form of a long cloak with sleeves, worn over all, and generally white. The head is shaved, in conformity with Buddhist practice, but not the beard. The shaven head, however, is not branded after the Chinese custom, although branding may be effected on other parts of the body, as the breast or arms. The order is recruited mainly from boys received by dedication or adoption in early childhood. Endowments are not numerous. Most of the monasteries are dependent for their maintenance upon the gifts of the laity, or, where opportunity serves, upon the personal labour of the monks in the cultivation of the temple lands.

11. Japan.—The temples and monasteries of Japan are large and well-appointed, and give the impression of a reality of creed and life which is almost altogether wanting to those on the continent. The numerous Buddhist sects of Japan have their home and distinctive life in the monastic communities, and the monasteries themselves in the details of their architecture present varieties of construction according to the sect to which they belong. In creed and belief the sects differ greatly among themselves, and have few features in common with the Buddhism of the south. In the past the activity and strenuousness of the national life found their almost complete counterpart in the monasteries, which formed associations of fighting monks at war with one another, oppressing and plundering the common people. In more settled times speculative thought, mystical, devotional, and idealistic, has been highly developed, perhaps most conspicuously in the 'Sect of the Pure Land,' who hold a theistic creed, and expound and practise a moral code which has much in common with that of the NT. Accompanying a revived religious life also, at different periods of the nation's history, missionary effort and preaching have been prosecuted with zeal and success. Both at home and in China a similar work of propagandism is being carried on at the present time with much devotion and energy.¹

12. Conclusion.—It is natural to compare and contrast the monastic principles and life of Buddhism with those of the Christian orders of the Early and Middle Ages in Europe. In the

general features of discipline and government there is much obvious similarity. All communities vowed to poverty and a celibate life, whether Hindu, Muhammadan, Buddhist, or Christian, almost of necessity organize themselves on somewhat similar lines. The essentially distinctive features of Buddhist monasticism would seem to be two: (1) the practice of literal mendicancy, which takes the form of a daily round, equipped with staff and begging-bowl, to receive whatever portions of food the charity of the householders may bestow. In the countries where the Mahāyāna type of Buddhism has prevailed this custom is not and probably never has been obligatory or usual. It forms a distinct and characteristic element, however, of early Buddhist rule and observance. (2) According to Buddhist teaching, salvation is to be found only within the limits of the order. The layman can achieve his own deliverance only if and when he dons the robe of the monk, and takes upon himself the monastic vows. He must seek refuge from the world in a life of retirement, meditation, and self-denial, for not otherwise can the fetters of *karma* be broken and *nirvāṇa* gained. In Buddhist polity and doctrine, therefore, the order holds a pre-eminent place distinct from and above that which it occupies in any other great religious system.

LITERATURE.—A selection only from a great and ever-growing literature can here be given. Many important works have been referred to in the course of the article. The original sources are available in the translations of *SBE* and elsewhere: *SBE* xiii. [1881], xvii. [1882], xx. [1886], *Vinaya Texts*, xi. [1900] *Buddhist Suttas*, xlix. A. S. GEDEN.

MONASTICISM (Hindu).—The habit of monasticism owes its origin, it has been said, to the natural tendencies of mankind towards mysticism and asceticism. These are developed, set in order, and satisfied, in the rule and restraint of the monastic life. In India, more perhaps than elsewhere, the practice is of very great antiquity; and the motives and instincts suggested, although true in general of the rise and history of Indian monasticism, in two respects at least render an insufficient account of the causes at work. In the routine existence of the monasteries, as far as this is distinct from the solitary or wandering life of the hermits and ascetics, mystical devotion has played but a small part. Mysticism in India has shunned companionship. The mystic aim has been the chosen and cherished pursuit of the lonely ascetic. And the latter, the ascetic motive or ideal, has been overwhelmingly predominant among the causes that have urged such great numbers of Indian men and women at all times to adopt the monastic robes and manner of life. A third motive, however, exercised a powerful influence in determining the choice of the monastic profession. This was

¹ Hackmann, *bk. iii. ch. viii.*; Geden, *Studies in the Religions of the East*, p. 368 ff.

the Indian view of life as a whole. By the Indian life has ever been regarded as essentially evil, and relief from the burden and sorrow of existence as the chief and final goal. In many forms of Indian doctrine, especially the Buddhist, but also in that of Hindu leaders and teachers before Gautama, this end was to be achieved only in and through a monastic dedication and life. It was impossible for the layman, distracted by the cares and encumbered by the possessions of the world, to secure salvation. Emancipated from these, he was free to devote himself to the highest aim, and to win his way to deliverance (*mokṣa* [*q.v.*]).

A second respect in which historically Indian monasticism in general has been distinguished from Buddhist or Christian is the deficiency of co-ordination or of a central control. The various orders have been for the most part loosely organized, and that from want not of organizing power but of inclination and will. The ideal of the Indian monk or ascetic is not and never has been a fixed residence and occupation, but rather freedom to wander at pleasure, to visit the various sacred places and shrines, and to dispose his manner of life and his time independently in all respects as seemed best to himself. Apparently the habits and methods of the monastic life have undergone little change or development since the earliest ages. The mendicant, or wandering ascetic, rather than the resident community of monks, has been the characteristic feature of Indian religious life; and the monasteries have served in a greater degree as lodging- or rest-houses than for fixed and permanent habitation. The earliest delineations of Indian social and religious life present the same features as are seen in modern times—a large drifting population of mendicants and ascetics, who find only a temporary home in the monasteries, and after a longer or shorter stay move on entirely as their own inclination prompts.

The habitual practice of a life thus ordered and determined is of extreme antiquity in India. It would seem to be based ultimately upon the Hindu regulation of the four *āśramas* (*q.v.*), according to which every Brāhman towards the close of his life must renounce the world and adopt the homeless life and the ascetic garb. In intention, therefore, no low-caste or out-caste man could become a monk, but only the 'twice-born.' In practice, of course, the wandering population is recruited from all castes; and many follow the life as an easy and convenient mode of gaining a subsistence without trouble to themselves.¹ The ancient Indian custom, familiar to Indian thought and in closest harmony with Indian ideals, formed the model for the great Buddhist and Jain communities of monks, and gave to them precept and habit and rule. Only in organization did the daughter communities go far beyond anything that was developed in Hinduism. Here the preference for an independent and self-regulated life proved itself the stronger, and broke away from all attempts at a settled and established order or government.

The Hindu monasteries, or 'maths' (Skr. *maṭha*), are invariably of small size, providing accommodation for only a few inmates. Except at the important pilgrim centres, as Hardwār or Benares (*qq.v.*), where durable buildings of brick are found, they are often little more than a collection of huts or cells ranged around a central court-yard. Permanent quarters are provided for the *mahant*, or presiding abbot, of the monastery and his resident students. The remaining buildings are occupied at the periodical festivals by the members of the

order to which the monastery belongs. Attached are a temple or shrine for the service of the deity, and in the larger monasteries at least a separate *dharmaśālā*, or rest-house, for the accommodation of travellers. The term *maṭha* appears to have been originally applied to the solitary hut of the religious recluse, and then to similar dwellings of the communities of hermits living together in the forest in the practice of austerities. Of such a woodland hermitage an attractive description is given in Kālidāsa's *Sakuntalā*. The name was ultimately extended to include all more or less permanent homes or residences for the monks. The maths exist in considerable numbers all over India, but the inmates for the most part live a retired life, keeping to themselves, and both they and their homes are little known to outsiders or Europeans. Each sect or monastic order has its own maths, that of the founder of the order being regarded as the chief. There is, however, no central control, nor any interference in the management or affairs of another monastery. The older monastic buildings are of the simplest character and architecture. Later more elaborate buildings were erected, sometimes of more than one storey; but they never compete in size or architectural pretensions with the great Buddhist *vihāras*. When the latter faith died out in Bengal, some of its monasteries passed into Hindu keeping and were appropriated for the use of Hindu monks.

To erect a monastery for the service of the monks and wandering ascetics has always been regarded as an act of religious merit. The math is the gift of a generous and pious layman; and of such donors there has never been any lack in India. In most instances an endowment for the upkeep of the monastery is provided either at the time of erection or by subsequent grant, and this is increased from time to time by the gifts of patrons who endeavour thus to secure merit for themselves. The individual monk is bound by a vow of poverty, but the monasteries often become exceedingly wealthy in revenue and lands. Since the monks themselves do no manual labour, nor indeed work of any kind, the lands are usually farmed out to Hindu lay-proprietors. The management, however, by the temple authorities of their large revenues has sometimes been so defective that the British Government has been compelled to interfere, and take over temporarily the control of the monastic estate.

The Hindu monk is known as *yatin*, one who curbs his passions and has renounced the world, or *vratin*, the devotee who has taken upon himself the vows of renunciation and consecration. The former term is technical among the Jains also, but is said to be regarded with disfavour. The *naiṣṭhika* is the religious student, who engages himself to remain with the *guru* as pupil and disciple after the close of the regular period of service as a *brāhmachārin*. The titles *yogin* and *sannyāsin* are more appropriate and more usually applied to the wandering ascetic, without home or stated means of livelihood. The former denotes the Hindu mystic and saint, who endeavours to attain to union with God by the way of self-control and asceticism. The *sannyāsin* has 'cast off' all worldly fetters and attachments, and is separated from all earthly wants or ties. *Bhikṣu*, 'beggar,' describes rather the common characteristic of the class. In the Pāli form of *bhikkhu* it has become the usual term for the Buddhist monk; Hindu usage ordinarily gives the preference to other names. All monks depend for their livelihood solely upon the charitable gifts of the laity. The daily round with the begging-bowl for doles of food at the door of the Hindu householder is never made in vain, and the flow of Indian charity and

¹ The abbot of a monastery in the Panjāb made complaint to J. C. Oman of the crowd of idle and worthless *sādhus* who charged themselves upon him and took advantage of his hospitality (*Mythics, Ascetics, and Saints of India*, p. 262 f.).

hospitality to ascetics is unstinted. The red- or yellow-coloured robe of the monk is an unflinching passport to generosity and benevolence all over India. Such generosity accrues to the merit of the giver, and has no regard to the character or motive of those who receive the alms. Among the latter there are not a few whose robes cover avarice and greed, or perhaps more often mere indolence and a desire to save themselves the trouble of providing for their own wants. But there are also among them sincere men, often of considerable learning, earnest and devoted in their pursuit of the truth.

The Sanskrit law-books contain rules and regulations for the guidance of the ascetic life. The sixth book of Manu is entirely devoted to this subject. Hermits and ascetics are to beg for their food once a day, to be indifferent to their reception, neither vexed at a refusal nor exultant when their bowl is well filled, to restrain their senses and appetites, eating little, and always to be on their guard lest they accidentally destroy life, watching the ground before them as they move, that their feet may not crush any living thing.¹ The same purpose is in view in the rule that a monk must not change his residence during *Vassa*, the season of the rains.² Elsewhere it is provided that students, ascetics, and others shall be free from tolls and taxes.³ They are not to be allowed to bear witness in the law-courts,⁴ probably because, being separated from the world, their testimony with regard to its doings would necessarily be unreliable; nor do they inherit property.⁵ Penances also are prescribed for those who for successive days omit to go on the begging round or neglect their other duties.⁶ The oversight of the monastery and the responsibility for entertaining itinerant monks or strangers are in the hands of a presiding elder or abbot (*mathādhipati*). Around him usually is gathered a band of young disciples, who are instructed by him in the Hindu scriptures and render him personal service in accordance with ancient immemorial custom. There is, however, no definite or fixed hierarchy or gradation of office. The inmates of the monastery are free to come or go at their own will, and neither their movements nor their actions are in any way controlled. They must wear the monastic garb, observe the vow of poverty, and depend entirely upon the bounty of others for their daily sustenance. Beyond these simple conditions they do as they please. The actual possessions which the monk or *sannyāsin* carries with him vary to a slight degree with the sect to which he belongs. The essentials are the robes and a begging-bowl; to which are usually added a staff, water-pot, and rosary, a strainer, a pair of sandals, the materials for smoking and betel-chewing, and perhaps one or more vessels for carrying or cooking food.

The vows (*vrata*) which the ascetic or monk undertakes to observe are five in number: avoiding hurt to any living creature, truthfulness, abstinence from theft, self-restraint, and liberality (Skr. *ahimsā, satya, asteya, brahmācārya, tyāga*). These have been adopted, with the exception of the last, in the Jain and Buddhist systems. There are also five lesser vows: equanimity of mind, obedience to the *guru*, gentleness, cleanliness, and purity in eating.⁷ The third is explained as having reference to the danger to living beings involved

in rough or hasty conduct. There is considerable difference between the sects in respect of the degree of ascetic self-denial or actual discomfort and pain which they voluntarily endure. Śaivite monks are, as a rule, more extreme in their manner of life and austerities. The Vaiṣṇavites allow themselves greater liberty and seldom, if ever, inflict upon themselves the prolonged bodily tortures by which the others seek to gain notoriety or accumulate merit. In all the monasteries the chief Hindu festivals are observed with religious rites and free entertainment for visitors, and the introduction or appointment of a new abbot is attended with much ceremony. Of the routine details of the ordinary monastic life, however, little is known.

The Sikhs also have monasteries of their own and religious orders. The three principal are those of the Akālins, Nirmālins, and Udāsins (*q.v.*).¹ They vary in both their dress and manner of wearing the hair, some being shaven and others displaying the loose dishevelled locks of the typical *sādhu*. In one instance at least in a monastery visited by J. C. Oman the *mahant* wore robes differing from those of the ordinary monk—a white long-sleeved coat or tunic and a turban of bright colours. The chief and largest monastery is at Amritsar (*q.v.*) near the Golden Temple, built of brick in two storeys and with two open courts, belonging to the Udāsin sect. The other sects also possess monasteries and temples of considerable size. In all a large part of the religious worship consists in the reading of the *Granth* (*q.v.*), and sometimes of other Hindu sacred books. Except at the seasons of the great festivals the monasteries are usually almost deserted, but on these occasions they are thronged with monks and others who have come to join in the feasting and religious ceremonies.

The monastic institutions of the Jains in some respects hold an intermediate position between those of the Hindus and the Buddhists. Their rule and order are more definitely framed than the former, but are less exacting than the Buddhist and allow more freedom to the individual. As in Buddhism also, the existing system or practice of the Brāhman monks or ascetics formed the model on which the founder of the Jain faith ordered his own community. Mahāvira himself is said to have had a following of fourteen or fifteen thousand monks, and more than twice that number of nuns. Over the monastic schools into which the community was divided were placed eleven chief disciples, or *ganadhāras*, or twelve if Gośāla be reckoned, who proved himself the unworthy rival and opponent of his master. Jain writers are said to compare the twelve disciples of their founder with the twelve apostles of Christ, and to assign to Gośāla the part of Judas the traitor.

The prevision and independence of the founder of Jainism are shown in the recognition which he accorded to the laity. It has been urged with much probability that this was one of the chief facts that enabled Jainism to withstand the stress of persecution and the steady pressure of the dominant Hinduism, when Buddhism, based solely upon a priesthood, decayed and fell away. Mahāvira established four orders of society within his system, each with its respective functions and rights: monks (*bhikṣus* or *yatis*) and nuns (*bhikṣuṇīs*), laymen (*śrāvakas*) and laywomen (*śrāvikās*). The Jain laity thus hold a definite place in the Church by the side of the ecclesiastical order. The Digambaras, however, refuse to women the right to enter the order, and assert that they cannot attain salvation (*mokṣa*).

The five vows of the Jain monk are the same as those of the Brāhman ascetic with the ex-

¹ Cf. art. ASCETICISM (Hindu), vol. ii. p. 24.

ception of the last, for which is substituted *aparigraha*, the renunciation of all desire, i.e. entire indifferentism.¹ This was the aim also of the Hindu monk; and it is probable that this was the original meaning of the fifth vow in Hinduism, although it is now differently explained. A sixth vow is said to be undertaken by some of the Svetāmbaras, never to eat after dark lest they should inadvertently destroy life; others declare that this rule is implicit in the first, *ahimsā*. To this duty of avoiding in every way injury to life Jains of every sect attach greater importance than either Hindu or Buddhist monks. The Jain layman is hardly less rigorous and careful than the monk. All Jain ascetics carry a piece of cloth to place over their mouths lest they should cause injury when inhaling.² The stricter sect of the Sthānakavāsins (Dhūṇḍhās) wear the mouth-cloth always, by night as well as by day; the other sects are less scrupulous. These precautions against the taking of life do not under all circumstances apply to the monk's own life. When the twelve necessary years of asceticism have been passed, which every monk observes in imitation of the founder of his faith, religious suicide is not only innocent but an act of merit and may be even a duty. Most of the *ganadhāras* are said to have thus ended their lives by voluntary starvation, and the practice is reported to have been not infrequent in former times.

In addition to the mouth-cloth the Jain monk bears the usual begging-bowl, and a strainer for his drinking-water. The members of all sects carry also an instrument for sweeping the path before them, which in the case of the Digambaras is usually a peacock's feather; the Svetāmbaras and Sthānakavāsins use a broom, of greater or less size. The head is shaved, and the two last-named sects wear the monastic robes of five pieces, of a white or yellow colour. The Digambaras ('sky-clad') go about unclothed. These last are for the most part found in the south of India. All monks are subject to the vow of personal poverty, but it is said that in many instances this is evaded, even to the extent of carrying coin or bank-notes on their person.

The monastic life both of the monks and of the nuns is ordered on similar lines to the Buddhist. In the ordinary course the inmates of the monastery rise early, and each then makes confession of the known or unknown sins of the past night, and proceeds to the temple for morning worship. This consists in meditation, bowing down before the idol with recitation of a sacred *mantram*, and in *pradakṣiṇa*, or circumambulation, which is performed four or seven times. About ten in the morning the round is made to beg for food. One monk, however, goes on behalf of all the inmates of the monastery; and in this respect Jain practice differs from Hindu or Buddhist. The food may not be eaten in the houses of the laity, but is brought back to the monastery and divided among all. According to rule the begging round should be made only once a day, but it is often repeated in the afternoon. After returning confession is made to the *guru* before partaking of the morning meal. The hours from one to three are devoted to study; and, if an afternoon circuit is undertaken for alms, it is succeeded, as in the morning, by confession. The second and last meal of the day is taken about sunset, and no monk is allowed to leave the monastery after dark.³

¹ For a full statement and discussion of the Jain vows see Stevenson, *Heart of Jainism*, p. 234 ff.

² It is usually supposed that the purpose of this is to avoid killing insects or minute animalcules in the air by drawing them into the mouth. Mrs. Stevenson, however, maintains, on the authority of some of the Jains themselves, that it is done lest the air itself should suffer harm (*Heart of Jainism*, pp. 100, 227).

³ Stevenson, p. 223 ff.

Initiation (*dīkṣā*) into the monastic order takes place at the hands of a priest after a year's probation. The novice lays aside his lay garments and ornaments, and adopts the robes of a monk. Within the monastery itself three grades or orders are recognized, based upon seniority or the choice of the community. The ordinary *sādhu*, monk or ascetic, of not less than a year's standing, may be elected *upādhyāya*, and it then becomes part of his duty to give instruction to the younger monks. Further powers of administration and discipline, including the right of excommunication, are in the hands of the *ācārya*, who is appointed on the ground of seniority, or for recognized knowledge and ability. Confession is usually made to the *ācārya*. For the greater part of the year most of the monks itinerate from place to place. It is only during the rainy season and at the principal festival seasons that the monasteries are fully occupied.

LITERATURE.—M. Monier-Williams, *Brāhmanism and Hinduism*, London, 1891; J. C. Oman, *Mystics, Ascetics, and Saints of India*, do. 1903 (cf. his *Cults, Customs, and Superstitions of India*, do. 1908, pt. II. ch. iv.); Mrs. Sinclair Stevenson, *Notes on Modern Jainism*, Oxford, 1910, *Heart of Jainism*, Oxford and London, 1915. The last-named work is the most complete and reliable account of Jainism yet published. Cf. also art. ASCETICISM (Hindu), FESTIVALS AND FASTS (Jain), HINDUISM, vol. vi. p. 701. A. S. GEDEN.

MONEY.—Money is the name applied to the instrument devised by man which enables him conveniently to effect exchanges of goods and services. It was a great advance upon barter when an intermediary was adopted by the trafficking parties that provided at the same time a measure of values and a generally acceptable medium of exchange. As man advanced from simple barbarism, he acquired some elementary forms of personal wealth, and the practice of exchanging with others to satisfy his growing diversity of wants would naturally arise; in course of time the advantage of possessing an intermediary which formed a unit of comparison of worth and represented a standard of values would come to be recognized. For this purpose objects of common utility or ornament were early adopted—oxen, cattle, sheep, furs, slaves, shells, nuts, precious stones, and bits of metal are examples of the various substances used as money in different circumstances and stages of civilization. These selected substances illustrate the kinds of wealth that were accumulated as stores of value and used as means of paying tribute and debt. They thus became also a form of what is called 'capital' in modern economics.

Gradually the defects of some of the various substances employed to satisfy the money-function became apparent in their inconvenient bulk and lack of divisibility for small payments, their perishableness and absence of equality and stability. Thus by degrees the essential attributes of good money emerged; it was found that the superior metals (gold and silver) possessed in an exceptional degree the qualities desirable in a good medium and a measure of value. Money should have stability in value; it should be durable, portable, divisible; it should be easily recognizable and capable of being coined. No substances possess and retain all these attributes absolutely, but gold and silver display them in the highest degree; consequently they have been generally adopted for money by civilized nations. Since they are natural products, variations in their supply create some fluctuations in value, as do also changes in demand which follow on the growth of population and the irregularities of trade. But, on the whole, gold has responded best to the needs of society as a basis for its complex and ever increasing trade and commerce. Standard money has the attribute

of universal acceptability; it commands confidence that it will be promptly received by others without loss of value. It measures the value of the services of labour; and wages as well as goods are estimated in terms of money. The value of goods, when expressed in money, is called their price.

The business of money-changing, of banking and finance, consists largely in the manipulation of money in its various forms and of obligations—debts, credits, loans, etc.—expressed in terms of money. These claims are discharged either by gold and silver or by documents (notes, cheques, bills, etc.), i.e. by paper money, representative of sums of metallic money and ultimately redeemable in standard coin.

The introduction of credit-instruments, as the paper substitutes for gold are called, is an extension of the money-function and a refinement upon the employment of metallic money. It is virtually a kind of return to barter; for, while it diminishes the use of coin, it simplifies exchanges and substitutes for payment in metal a promise on paper; this representative money becomes a valuable commodity and multiplies business by its convenience. Debts are set off against debts by means of credit-instruments, substitutes for money that circulate quickly; they become a peculiar currency of promises or claims that do temporary duty, and they are easily transmitted by post; thus they vastly facilitate the business of exchange. The term 'credit' implies that these instruments are promises, and they rest in the long run upon the recognized metallic basis—gold; therefore an adequate amount of gold must be accumulated and safely stored in order to give stability and confidence to the system.

In OT times money was always weighed (Gn 23¹⁶). This was a necessary precaution in earlier periods, but in modern times the process of coining, exercised as an exclusive function of the Government, confers absolute certainty, accuracy, and uniformity, and inspires confidence; the stamped coin carries with it evidence of the amount and value of the gold that it represents, where gold is the accepted standard of value. The subsidiary coins of silver and bronze are legal tender only within moderate limits, viz. two pounds in silver, and twelve pence in bronze in Great Britain; they are only token coinage, and do not correspond to their intrinsic value in metal, which is small. The value of gold, like that of other commodities, depends ultimately upon the law of supply and demand; the value varies with the amount available for money purposes, for large quantities of the precious metals are absorbed in the arts and as personal ornaments.

The quantity theory of money—i.e. that the value varies inversely as the quantity—assumes that all exchanges are made in the standard coin, but the use of paper substitutes, while it does not nullify the abstract theory, introduces modifications too technical for detailed explanation in an article which is mainly descriptive. The system of substituting paper currency for the standard coin requires for security that such paper shall be convertible into gold on demand. To provide this most essential requisite an adequate cash reserve of gold must be maintained. This is one of the responsible functions of the Bank of England. The management and control of the reserve are matters too intricate for present discussion. The excessive issue of inconvertible paper—i.e. of notes which cannot be met by gold on demand—has led many countries into great difficulties, and has frequently caused much loss and suffering. Paper currency debased by over-issue drives out gold, destroys confidence, raises prices, and produces financial disaster; business is checked, and the injury falls with peculiar severity upon the

wage-receiving classes, who find that their wages paid in paper at such times fall greatly in buying power. There is no remedy but the re-instatement of the currency on a sound basis. A large number of interesting economic problems arise in connexion with the use of money; they are, however, too technical for present consideration, which is restricted to a general account of the nature and services of this useful instrument of civilization. Money is a powerful factor in the spread of civilization, in advancing progress, in distributing the varied products of nature throughout the world. Money, in fact, may rank with roads, vehicles, beasts of burden, railways, steamships, posts, and telegraphs in the advancement of human material well-being. The oft-quoted passage, 'The love of money is the root of all evil,' is frequently misapplied as casting a slur upon money itself and upon those engaged in occupations concerned with its employment. The dictum was, however, intended as a condemnation of greed, selfishness, worldliness, and absorption in gain; its profound truth and seriousness render it in no sense condemnatory of the use of money, which is of as great service to society in the distribution of products as a ship, a railway, or any other instrument subservient to the material needs of man. In many of the remarks of Jesus in the parables and in the gospel narratives reference is made to money in its ordinary uses; in all these cases its practical utility is taken for granted and its economic service is unquestioned.

G. ARMITAGE-SMITH.

MONGOLS.—1. *Ethnology and habitat.*—Like the Ainus and the Dravidians (q.v.), the Mongols are a race distinctively Asiatic. They fall into three great divisions—Buriats (q.v.), Western Mongols (Kalmuks), and Eastern Mongols. The habitat of the Kalmuks extends from the Hoang-ho to the Manich (a tributary of the Don), their special centres being Astrakhan and the Caucasus, Zungaria, N.W. Mongolia, Alashan, N. Tibet, and the Chinese province of Kokonor. The Eastern Mongolians inhabit chiefly Mongolia, the southern portion being divided into a number of tribes, such as the Tumets and Chakhars, while the northern section consists of the more homogeneous Khalkas.

The Mongolian type is best represented by the Kalmuks and the Khalkhas:

'Nearly average stature (1m. 63-64); head, sub-brachycephalic (ceph. ind. on the liv. sub. 83); black straight hair, pilous system little developed; the skin of a pale-yellow or brownish hue, prominent cheek-bones, thin straight flattened nose, Mongoloid eyes,' etc. (J. Deniker, *Races of Man*, London, 1901, p. 879).

Another peculiar characteristic of this race is the 'Mongolian spot,' small dark patches of pigmentation, especially in the sacrolumbar region, frequently observable in infants, but disappearing in early childhood. The 'Mongolian spot' is not, however, restricted to the Mongols; it occurs sporadically elsewhere, instances having been noted, e.g., among the modern Indians of Mexico (cf. also Deniker, p. 51).

As a result of migrations, the Mongolian race has spread far beyond its original habitat. It has profoundly affected the Chinese (particularly in the south) and Japanese; in Bengal and Orissa the crossing of Mongolian with Dravidian has given rise to the Mongolo-Dravidian type, and other 'Mongoloid' types appear in the Himalaya region and in the Far East.

The chief Asiatic area occupied by non-Buriat

Mongols (Kalmuks, Khalkas, etc.) is bounded on the north by Siberia, on the south by China, on the west by Russian Turkestan and Chinese Turkestan, and on the east by Manchuria. It forms a high but depressed undulating plateau, roughly 2500 feet in altitude, hemmed in by an immense double or triple chain of forest-covered mountains, known together as the Hingan and Yinshan, on the one side, and by the Altai range and its offshoots on the other. Although the greater portion is Gobi (a Turki word), or 'Great (Desert) Expanse,' and is destitute of rivers sufficiently broad and deep to impede seriously the swooping movements of horsemen, there are plenty of salt lakes (only one of which escapes into Russia by a river), innumerable oases and pasture lands, suitably located sweet-water wells, and even cultivable or forest lands dotted about and available in turn at different seasons of the year to the nomads who know the peculiarities of the country so well. This fact explains how armies of millions can easily move on the simple condition that they possess sufficient cattle, horses, sheep, and camels to drive before or with themselves as food and clothing; nothing else matters, for wood and iron can be picked up by the way at various well-known places, and women with babies can be carried with the tents in huge carts. This vast rim of mountain range nearly all round constitutes a huge watershed, and on the outer side rivers run into Manchuria, Russia, and Turkestan; but the gravelly expanse of Gobi with its parched atmosphere soon causes the sources flowing into the depressed desert portions of Mongolia to dry up or disappear into the sands, so that in many places recourse must be had to rude cisterns or reservoirs, automatically collecting fresh water after each summer storm. The Onon and Kerulon rivers, the valleys of which have during the past 2000 years witnessed the successive rise to political prominence of several obscure tribes, bring the north centre of Mongolia proper into direct water communication with Siberia (*i.e.* Russia) and N. Manchuria (*i.e.* China).

2. Civilization and religion.—Mongol family life has been admirably described in a series of articles written (anonymously) by a Protestant missionary for the *Chinese Recorder* (a Shanghai publication) in 1875. Immoveable property is scarcely conceived of, and the idea of personal property and individual rights is almost equally lacking, except in reference to one's horse and saddle, clothing, and weapons. Even one's wife—who, so far as nature allows it, seems to be the absolute equal of her husband—is only a life interest, for all wives (except one's own actual mother) pass over on the death of their temporary possessor, with the felt tent and the stock-pot, to the eldest son, or, failing sons, to brothers, cousins, or uncles. In case of great warlike expeditions, of course, there are temporary aggregations of men, and the modern Mongols, like the Turks and Huns, always have an annual tryst; but as a rule tribes scatter, families scatter, and individuals scatter, so that the *yurtā*, or the felt tent (or *meng-gu bo*, as the Chinese call it in E. Mongolia), is the sole economical unit. In 1760 the entire Kalmuk nation, four subdivisions, consisted of only 200,000 tents all told, *i.e.* before they were conquered. In the distance, on the prairie or grassy plain north of the Great Wall, one sees one or more black spots like dung-heaps. These turn out on closer inspection to be felt *bo*, firmly attached by long ropes to pegs or other firmer anchorages fixed in the ground. It is the correct thing to make some sound on approaching; otherwise one or more powerful dogs, often of Tibetan breed, may attack the intruder. The tents are composed of thick felts, arranged to withstand the wind and snow. According to wealth or poverty the interior is hung with hand-

some or shabby stuffs, and the exterior is sometimes additionally protected with Chinese oil-paper or other such impervious material; but severe simplicity is the general rule; all luxury is makeshift. If a man has horses and dogs, or even only one horse and one dog, and maybe works for someone else as a herd, he is a poor man; a rich man may have as many as 1000 or more horses and 100 or more camels (all of the two-humped or Bactrian kind), not to mention sheep and goats (never pigs); but, rich or poor, the mode of life is always the same—rough, strong, home-made clothes, harness, and equipment; one or two trunks to contain treasures and best clothes; a hospitable reception for any traveller, poor or rich; no tables or chairs; and a fixed etiquette as to privacy, precedence, or the right to squat in certain honoured or tabued places. No one who carefully reads all that has been recently written about the eastern and western nomads from the Shilka to the Volga can doubt that in physique, mode of life, and even in basic language, they are and always in historical times have been practically the same people, *i.e.* a congeries of tribes whose national designations have no deeper significance than that from time to time an eponymous hero or a brilliant family, clan, or tribe has succeeded in bringing most other tribes under his or its own name or banner.

With regard to the modern Mongols—especially the Khalkas—who had (sometime before the Manchus seized their opportunity of taming them through Lāmaism and saintly influences) already succumbed to drink and earlier strong religious influences, they may be said to have now entirely lost the ferocity, warlike initiative, and passion for plunder that characterized the conquering hordes of Jenghiz Khan in the early 13th century. Even Jenghiz himself, though a mere shamanist, or casual 'idolater,' and, so far as is known, destitute of any religious training, seems to have been by natural rectitude of character susceptible to ethical influences when not injudiciously thrust upon him; and this quite spontaneously, for he sent for and respectfully consulted a humble Chinese Taoist philosopher who travelled all the way from Shan Tung to Samargand to advise him as to the humanity of his own warlike proceedings.¹

The religion of the Kalmuks and of the Eastern Mongols is Lāmaism (*q.v.*); the older Mongol religion, however, was shamanism, which is retained by the Buriats (*q.v.*).

3. Present-day distribution.—When the Chinese Ming dynasty in 1368 sent the Mongol tyrants in Peking back to their steppes, the old division into the Western or right 'wing' and the Eastern or left 'wing'—practically Kalmuk and Khalka—was reverted to by the ejected Mongols, and these two wings were subdivided into the *Djirgughan Tumen*, or 'Six Myriads.' When the Manchus conquered or conciliated the Chakhars and other inner (Eastern) Mongols in 1628–33 (*i.e.* before they became emperors of China in 1644 as well as Manchu emperors), they organized all of them except the Chakhars into six *chogolgan*,² or 'leagues' (translated by the Chinese word *meng*, 'sworn alliance'). These six leagues, four east (Chih Li) and two west (Shan Si), are again subdivided into 24 *aimak*, or 'tribes' (translated by the Chinese word *pu*; this word *aimak* occasionally appears in Chinese Jenghizide history as *aima*, and in Chinese Manchu history occasionally as *aiman*).

¹ See E. Bretschneider, 'Travels of the Taoist Ch'ang Ch'un,' *Chinese Recorder*, v. [1874] 173–190, vi. [1875] 1–22; also 'Traces of Christianity in Mongolia in the XIII century,' by the archimandrite Palladius, *ib.* vi. [1875] 104–114.

² W. F. Meyers, *The Chinese Government*, Shanghai, 1875, suggests that, in so doing, the Manchus were continuing the principle of the Six Myriads, and (pending the conquest at a later date of the Khalkas and Kalmuks) were applying it to the Inner Mongols along the Great Wall.

This is not the place to introduce a discussion on language or a long list of native Mongol tribal names; but it may be mentioned as specially significant that the Khartsin tribe of the Chosotu league are the absolutely direct descendants of Jenghiz and Kublai; they now occupy the steppes north of Jéhol (thrice visited in 1869-71 by the present writer).

Besides the 24 tribes of Inner Mongols under their own native *jassaks*, and irregularly subdivided into 49 flags, or banners, there is still a more intimate class of Inner Mongols known as the 'herdsmen,' who are not ruled by their own princes at all, but by the military governors at Tenduc, Kalgan, and Jéhol. The extramural area of which Kalgan (= 'the gate' in Mongol) is the governing centre is popularly known as Chakhar, a word derived from the leading tribe, called during the Ming dynasty Chakhar, or Chakhan-r. There are also the Mongols of Kokonor, descendants of a collateral branch of Jenghiz's family, with whom have been associated a number of Kalmuk tribes from the west; they also intermarry with the Manchus, but were not entitled, like the Inner Mongols, to style themselves 'cousin.' Besides these main divisions, there are the Tumet tribes of N. Shan Si, the Bargu, the Urianghai, the Mingad, the Jakchin, and other odd remnants mostly of Kalmuk type, which for convenience are ranked among the herdsmen, and are under the administration of one or the other of the Manchu (now Chinese) *tutungs*, or military governors, from Uliassutai in the west to Jéhol in the east.¹

The Outer Mongols mainly consist of two races—the Khalkas and Kalmuks—between whom there were prolonged and bloody wars until the Manchus (after having subdued the Inner Mongols and China itself) reduced both to complete subjection. Even after the ejection of the Jenghizide dynasty from China, when both classes of Mongols were thrust back upon their deserts, they frequently crossed the desert and fought incessantly between themselves, besides, separately or in unison, making raids upon the Ming empire. The Khalka area is easily recognizable on any map because the four (originally three) tribes or khanates into which they are divided are usually plainly marked as the Tushétu, Tsetsen, Jassaktu, and Sainnoin khanates; the last-named was carved out of the first, during the Ming dynasty, by the Dalai Lāma of Tibet as a reward for services rendered to the Yellow-hats at the expense of the Red. These four Khalka tribes, or khanates, were again subdivided into over 80 flags, or banners, but this arrangement was complicated by two of their banners having been incorporated with the Inner Mongols, whilst, on the other hand, three Kalmuk banners were incorporated with the Khalkas. The other two of the four Khalka khanates used to fall under the high political influence of the Mongol *hutuktu*, or saint, at Urga, who had a Manchu resident to keep things right. A certain proportion of the Kalmuk race was moved to the neighbourhood of Lake Kokonor after the Manchu conquest of 1753-54, and it there falls under the control of the Chinese military governor at Sining. These Mongol tribes are divided among themselves; the Kalmuks have their own local saints both in the west and at Kokonor, but the Khalkas, though kinsmen, are almost hereditary enemies. Nor can the Khalkas easily coalesce with the 49 flags or 24 tribes of Inner Mongols. The latter represent the true historical Tata, as

the immediate descendants of the Jenghizides were officially styled by the Ming dynasty; after nearly 200 years of warfare with China they joined the Manchus honourably and nearly as equals, for they were never conquered, as the Khalkas and Kalmuks were some generations later. They have always been kindly treated by and have intermarried with the Manchus, some of whose emperors have married pure Mongol women, recognizing them as legitimate empresses of China. When the Republic was first declared in 1912, there was some talk of the Inner Mongols from a racial point of view joining their countrymen, the Khalkas, under the united rule of the rebellious *hutuktu* at Urga, but this uprising was averted by the moral delinquencies of the *hutuktu*, the political acumen of President Yuan, and the lack of sympathy between the pure outer nomads and their inner brethren, who are now by long habit more or less impregnated with Chinese civilization, political privilege, and economic luxury.

MONISM.—I. The term.—The term 'monism' was coined by Christian Wolff (1679-1754), and was used by him to denote the philosophical theories which recognized only a single kind of reality, whether physical or psychical, so that he could apply the name 'monists' equally well to the materialists and to the so-called idealists of his age. It is easy to understand why the word in this artificial sense should never come into general use, and in fact it was so employed only sporadically by individual thinkers of the 18th century. In the 19th cent. the term 'monism' came to be used by the disciples of Hegel as designating their own peculiar mode of thought; thus, e.g., K. F. Goeschel, in 1832, published a work entitled, *Der Monismus des Gedankens* ('The Monism of Thought'). In this sense too, however, the term had but a limited usage. In point of fact, it first found a place in current speech as the designation of a philosophical movement closely related to the modern theory of biological evolution, and it was, in particular, the biologist Haeckel and the philo-

¹ See Parker, 'Manchu Relations with Mongolia,' 'Campaigns against the Khalkas and Oelots,' and other papers on this subject in *China Rep.* xv. [1886-87], xvi. [1888-89], also a paper on 'Kalmuck Organization,' *ib.* xxiii. [1898-99].

logist Schleicher who brought the word into general currency. In Germany the philosophical movement referred to has found concrete expression in a 'monistic society' (*Monistenbund*), which has drawn to itself a considerable body of adherents. Nevertheless, certain other applications of the term still maintain their ground. In especial, the name 'monism' is given to the philosophical theory which, instead of subordinating the soul to the body, or the body to the soul, interprets them as equivalent aspects of a single fundamental process, and on this ground constantly refers each to the other. Of monism in this sense Spinoza is generally regarded as the leading exponent. Finally, taking the term in its widest sense, we might apply it to every mode of thought which seeks to transcend the distinction between the physical and the psychical, and to reach an ultimate unity. The fact that these various significations are often mingled together in common usage has led to great confusion and much unprofitable controversy.

2. **Monism as expressing an inherent need of the mind.**—In its widest sense monism is the expression of a demand which no philosophy and no religion can in the last resort evade. The human mind at length refuses to allow the real to fall apart into the irreconcilable opposites of body and soul, of nature and spirit; and every system of thought must ultimately arrive at some kind of unity. In this sense Christianity itself is a monism—a spiritual monism—since it traces all reality to the divine Spirit. In the philosophical realm, however, monism usually stands for the Spinozistic view, which recognizes an exact correspondence between extension and thought, the visible and the invisible, finds the same laws and forces to work in each, and interprets the order and connexion of thought as identical with the order and connexion of things (Spinoza, *Eth.* ii. prop. 7: 'ordo et connexio idearum idem est ac ordo et connexio rerum'). This view has the advantage of providing a solution of the simplest kind for a problem which cost Spinoza's predecessors much trouble—the problem, namely, of the interaction of soul and body; for, on this theory, according to which the two series of facts proceed side by side quite independently, and yet remain ever in mutual harmony, there is no interaction at all, the specific data of either series being explained by the relations of that series alone. Modern psychology, in following up this theory, has propounded the doctrine of 'psychophysical parallelism,' and strives to apply the doctrine to mental and bodily processes in detail. As this whole mode of thought apparently permits each aspect to develop its own distinctive character, without severing it or keeping it apart from the other, it has proved remarkably attractive to the human mind.

3. **Its tendency to one-sidedness.**—Its power of attraction, however, lasts only as long as we keep to the general outlines of the problem, and every attempt to give the idea a more precise application encounters great difficulties, and results in giving the preponderance to one or other of the two sides: either the physical becomes predominant, and the psychical a mere reflexion or concomitant of it, or else the psychical is assigned the superior position and the physical becomes simply its outward expression or a means to its ends. Thus monism inevitably breaks up into two forms—an idealistic and a naturalistic—and there never has been, nor can there ever be, a pure monism, i.e. a monism maintaining a perfect equipoise between body and spirit. The clearest exemplification of this is found in Spinoza himself; a closer scrutiny of his thought shows that he is never purely monistic, but always leans more either to naturalism or to idealism—the former in the groundwork, the latter in

the consummation, of his system, as appears more especially in his *Ethics*. In the beginning of that work the supreme factor, the core of the real, is nature, while psychical life is a mere representation of the natural process, and simply follows its order; at the close, however, this naturalism is transmuted into an idealism, for Spinoza's doctrine that all reality is supported and integrated by a divine life, and that nature only moulds that life into visible form, as well as the doctrine that man is capable of assimilating the whole universe, and of attaining infinity and eternity by the intellectual love of God ('amor dei intellectualis'), cannot be called anything but idealism. Whatever Spinoza may have meant, he certainly did not reach a pure monism; and the subsequent development of philosophical thought shows that the monistic movement always inclines either to the one side or to the other.

(a) **Idealistic monism.**—The classical period of German literature was dominated by an idealistic monism, and, in particular, Goethe gave his full adherence to the view. In the philosophy of the period, this type of idealism found powerful support in Schelling's philosophy of identity. Yet, while in art and philosophical thought the outer and inner worlds were made closely dependent upon each other and were firmly interlinked, they were not regarded as of co-ordinate authority; on the contrary, the universe of reality seems here to be pervaded by an inner life, and the union of the visible and the invisible world is brought about upon the basis of the spirit. It was, however, strongly insisted upon that the inward life cannot come to its own, or realize itself perfectly, without in some way embodying itself and taking perceptible form in the external. Here we have the genesis of an æsthetic and philosophical monism of the idealistic type.

(b) **Naturalistic monism.**—On the other hand, the monism frequently associated with the modern theory of evolution exhibits a naturalistic tendency. It regards the physical world as the essential substance of the real, and differs from materialism only in the circumstance that it conceives the psychical, not as derived from physical processes, but as present from the first even in the most minute elements of the material world, and as forming an essential constituent therein. Even so, however, the psychical is not thought of as attaining to independence and spontaneity; it has no powers or laws peculiarly its own, but is in every respect subordinate to, and wholly interwoven with, external nature; nor again, on this theory, is human life endowed with any special significance or accorded any distinctive vocation. It is true that this naturalistic monism, in its theory of practical life, recognizes the ideal ends of the Good, the True, and the Beautiful, and undertakes the task of furthering them. But it can do so only by contravening its own naturalistic principles, and thus it comes to exhibit the fatal inconsequence of theoretically recognizing unity as its supreme aim while in practice falling into an absolute contradiction between thought and action.

The progress that this theory of naturalistic monism, in spite of its inherent flaws, is making in contemporary life, in Germany at least, is due to the concurrence of various causes. Nature, formerly so often sadly ignored, has come to mean more and more for the modern mind. Not only does she reveal ever more fully the delicate texture of her being, but in yielding herself to the practical arts she has added vastly to our command of the environment. The importance of the material factor for human well-being is much more widely recognized in modern civilization than was once the case. The result of these various developments is that

Nature now exercises a much more profound influence even upon our thoughts and convictions than she formerly did. This does not, of course, lead necessarily to a naturalistic philosophy, nor was there any great danger of such an issue as long as high spiritual ends held sway among human beings and dominated their common efforts. But such spiritual ends have been, if not entirely lost sight of, yet largely obscured, in the development of modern life; with regard to the ultimate questions of human existence mankind is now in a state of grave disunion, and common effort has given place to widely divergent tendencies. Amid so much diversity regarding the content of the spiritual life, the longing for a single all-embracing theory of existence readily attracts men to the path of naturalism, which proffers what seems to be the simplest and most intelligible solution of the great problem. In reality, therefore, it is the defects of the opposite view that here lend strength to monism.

Another factor which—in Germany at least—operates in favour of naturalistic monism is found in the perplexities that have emerged in the province of religion and the Church. That religion at the present day bristles with problems, and that the minds of men differ widely in the treatment of them, are facts that cannot be denied even by those for whom religion is a supreme interest. In Germany, however, the situation is greatly aggravated by the intimate relations between Church and State, since in such circumstances the doctrines of religion readily come to be felt as a restraint imposed by the State upon thought; and, where large numbers are already alienated from religion, or in dubiety regarding it, there is a natural tendency to look with sympathy upon movements that set forth with perfect candour the conflict of ideals, especially the conflict between natural science and the teaching of the Church, and seek to bring it to a decisive settlement. From this position the monist may regard himself as a champion of freedom and truth.

4. *Its function and limitations.*—When we have in this way explained the spread of naturalistic monism, we have at the same time shown its limitations. It possesses a certain power and has also a degree of rightful authority as long as it maintains a critical attitude and provides incentives to special tendencies of thought; and this condition is fulfilled when it insists upon a higher recognition of the natural factor in human life, and demands that the assured results of modern science shall not be ignored by those who speak in the name of religion. Its weakness, again, shows itself in the positive aspect of its work, and in its claim to serve as a guide to human life and to satisfy the human soul. For such ends it has, in truth, nothing to offer but an intellectual interpretation of things—an interpretation which purports, by improving our conceptions of nature and by showing that man forms part of nature, to be able to supply the human heart with powerful impulses and endow it with happiness. But between ends and means, between claim and achievement, there is a wide disparity. The scientific procedure of monism, moreover, suffers from the defect of confusing natural science with the philosophy of nature, and of too rashly transforming the results of natural science into principles of the cosmos, while giving no recognition at all to the peculiar character of spiritual life or the process of universal history. But, whatever judgment we may pass upon this modern monism, it is certainly a notable feature in the life of the present day.

MONKEY.—See ANIMALS.

MONOLATRY AND HENOTHEISM.—A whole group of words, some of them classical, are compounded with *μῆνος* as a prefix. Ecclesiastical usage added not a few others—e.g., 'monogamy,' marriage only once, re-marriage after the death of one's wife being forbidden, 'Monophysites,' 'Monothelites.' To these was added, in modern times, 'monotheism' (*q.v.*); this term was touched with ambiguity, since it was sometimes a synonym for unitarianism. Last of all, apparently by Julius Wellhausen,¹ 'monolatry' was coined to express not belief in the sole existence of one god, but restriction of worship to one object of trust and loyalty, although other races might admittedly have other supernatural helpers.

If the first half of the word shows it to be akin to monotheism, its affinities on the other side are with idolatry (see IMAGES AND IDOLS). Christian usage, from the Bible downwards, vacillates between interpreting idolatry as image-worship and as worship of 'false' gods in the sense of non-existent beings. In the Roman Catholic Church the distinction is made between *latría*, worship paid only to the Persons of the Trinity, and *dulia*, veneration of the saints (even the Blessed Virgin receives not *latría*, but *hyperdulia*). Both in the Roman and in the Greek Churches *adoratio* (*προσκύνησις*) or *dulia* is rendered to images or icons of the Divine Persons and saints, as well as to the Gospels, relics, etc. (cf. Denzinger¹, nos. 302, 337, 342, 985 f.).

Unhappily, there is another term which habitually presents itself as a synonym for monolatry and as a rival—henotheism. This word was coined by F. Max Müller while under the influence of Schelling. In a review of Renan, entitled 'Semitic Monotheism,' and contributed to the *Times* in 1860 (reprinted in *Chips from a German Workshop*, i. [1867], and again in *Selected Essays*, ii. [1881]), Müller, while repudiating Renan's theory of a monotheistic instinct peculiar to the Semites, finds at the basis of all religion a crude or vague faith in the divine, not yet articulated either into polytheism or into monotheism, and calls this 'henotheism.' As thus defined on its first emergence, henotheism is a hypothetical construction, belonging to a period earlier than recorded history. E. von Hartmann² is fairly in line with this when he speaks of henotheism as 'the original nature-religion'; as the 'indifference of mono-, poly-, and pan-theism'; as the 'identity of essence of all the gods.'

Much greater importance, however, attaches to Müller's later usage, introduced in a 'Lecture on the Vedas' of 1865 (also reprinted in *Chips*, i. and *Essays*, ii.). Here we have a pair of synonymous terms—'henotheism' and 'kathenotheism'—which refer to a well-marked historical phenomenon. Study of the Vedas had impressed Max Müller with the way in which each deity, out of a large recognized pantheon, is treated in turn as if the supreme or even the sole god. While Indian religion offers the classical illustration of

¹ T. H. Huxley (*Nineteenth Cent.*, xix. [1886] 495) is quoted by *OED* in this sense; Robertson Smith is also quoted (*OTC*, Edinburgh, 1881, p. 273; 'natural . . . Semitic monolatry').
² As summarized in O. Pfleiderer, *Phil. of Religion*, Eng. tr., London and Edinburgh, 1886-88, iii. 19.

this attitude, it recurs elsewhere. Max Müller recognizes it in Greece, Italy, and Germany (*HL*, 1878, London, 1879, p. 286), as well as in Finland (*Contributions to Science of Mythology*, London, 1897, p. 264). Both these books speak of 'henotheism or kathenotheism' (*HL*, p. 271), 'kathenotheism or by a shortened name henotheism' (*Contributions to Science of Mythology*, p. 140). When P. Asmus describes the whole of 'Indo-germanic' religion as henotheistic,¹ because of the alleged tendency of all its divinities to pass into each other, he is inspired by Max Müller's second usage, though he distorts it.

It may seem to us that Müller has himself been guilty of a certain confusion. But the worst confusion of all is introduced by Pfeiderer (*loc. cit.*), without regard to either of Müller's definitions, and in conscious opposition to Hartmann and Asmus. He recognizes—distinctively among the Semites—not, of course, a monotheistic instinct, but a 'national or relative monotheism which in the case of Israel was the porch to pure monotheism' (iii. 34 n.); and this he calls henotheism. We cannot wonder if high authorities have proposed to suppress the term 'henotheism' because of its ambiguity (e.g., J. Estlin Carpenter, in *EB*,^{xiii} xxi. 72; H. Oldenberg, *Rel. des Veda*, Berlin, 1894, p. 101, note 1; E. W. Hopkins, 'Henotheism in the Rig Veda,' in *Class. Studies in Honour of H. Drisler*, New York, 1894, pp. 75–83, *Religions of India*, Boston, 1895, p. 139 f.; A. A. Macdonell, *Vedic Mythology*, Strassburg, 1897, p. 16 f., with references to earlier literature).

'Kathenotheism' is regarded by Carpenter as already extinct. The word is cited by E. B. Tylor (*PO* ii. 354), but has certainly found little favour.

One might have wished to see 'kathenotheism' and 'monolatry' spared, as names for two very different approaches towards monotheism, while the word 'henotheism' might either be wholly suppressed or else generalized to include both kathenotheism and monolatry, together with any other workings of monotheistic tendency that fall short of monotheism properly so called. There is much significance for theists in irrepressible movements towards recognition of one great help, one supreme power, one sovereign goodness.

Allan Menzies's distinction (*Hist. of Religion*⁴, London, 1911, ch. iv, p. 55; he has been good enough to confirm or explain his meaning in a private letter) between henotheism and kathenotheism follows Pfeiderer (and makes henotheism cover exactly the phenomena of monolatry). But any suggestion that this distinction is Max Müller's own must be repelled. Cf., further, Müller's *Physical Religion*, 1891 (Glasgow Gifford Lecture of 1890), p. 181 n.: 'It is to be regretted that other scholars should have used the name henotheistic in a different sense from that which I assigned to it. Nothing causes so much confusion as the equivocal use of a technical term [but is Müller himself quite clear of blame?], and the framer of a new term has generally had the right of defining it.'

The classical region of monolatry is the religion of Israel, whose phenomena, as we saw, probably suggested the name. The First Commandment (of the greater Decalogue, Ex 20 or Dt 5) crystallizes the requirement and carries it into the moral region. Kindred Western Semitic races—possibly other races too—may have been known something similar, upon its lower side. Moab or Ammon or Edom may have been loyal to the tribal god in mere patriotic prejudice. Loyalty to the God of righteousness, in Israel or in all lands under heaven, means vastly more. The only real justification for monolatrous behaviour is the monotheistic fact. It is indeed true that 'the distinction between monolatry and monotheism' is often a narrow one (art. GOD [Biblical and Christian], vol. vi. p. 253). It is also true that there will be an element of monolatry in religion as long as earthly conditions endure. Human faith—theistic, or fully Christian—is no bare recognition of facts which exist independently

¹ Pfeiderer, iii. 20.

of our attitude. Faith is choice of God and a pouring out of our humble all in His service.

LITERATURE.—Besides the references given above, see art. GOD (Biblical and Christian), noting both 'monolatry' (vol. vi. pp. 251 b, 252 a, and 253 b) and 'henotheism' (pp. 252 a b, 275 b, 276 a, 277 a, 283 b, 289 b). The student must carefully observe in what sense either word is employed by the different writers. 'Kathenotheism' is not employed at all in the articles.

ROBERT MACKINTOSH.

MONOPHYSITISM.—I. Before the Monophysites.—The name 'Monophysites,' as denoting a party in the Christian Church, ought in strict usage to be applied only to those who regarded as erroneous the doctrine formulated as a standard by the Synod of Chalcedon (A.D. 451), i.e. the doctrine of the two natures (*δυο φύσεις*), divine and human, in the one person (*ὑπόστασις* or *πρόσωπον*) of Jesus Christ, and who took as the watchword of their faith 'the one nature of the incarnate Word of God' (*μία φύσις τοῦ θεοῦ λόγου σεσαρκωμένου*). The doctrine of the single nature of Christ, however, did not then emerge for the first time, and we begin by narrating the history of Monophysitism prior to the rise of the Monophysites proper.

The formula *μία φύσις* is first found among the Arians (see art. ARIANISM, vol. i. p. 775 ff.). Lucian of Antioch and his followers had spoken of the one divine or, more properly, semi-divine nature (*φύσις* or *ὑπόστασις*, the two terms not being as yet distinguished) of the Logos, in which inhered liability to suffering (*πάθη*) and limited knowledge (*ἀγνοεῖν*). Eudoxius of Constantinople († A.D. 370) acknowledged the Word made flesh but not become man (*σαρκωθέντα, οὐκ ἐνανθρωπήσαντα*), who had not assumed a human soul, but became flesh in order to manifest Himself to us as God through the flesh as through a curtain; it was therefore quite wrong to speak of two natures (*δυο φύσεις*), since the Word was not man in the full sense (*τέλειος ἄνθρωπος*), but God in the flesh (*θεὸς ἐν σαρκί*), i.e. viewed as a whole, one composite nature (*μία τὸ ὅλον κατὰ σύνθεσιν φύσις*). Apollinaris of Laodicea (see art. APOLLINARISM, vol. i. p. 606 ff.) expressed himself in similar terms, though in a line of thought directly contrary to that of Arianism. It was his firm conviction that the perfect God (*θεὸς τέλειος*) had descended upon the earth, and in this belief he felt that he was at one with the Nicæans as opposed to the Arians; but no less decisively he maintained also that two complete entities cannot become a unity (*δυο τέλεια ἐν γενέσθαι οὐ δύναται*), and thus that the union of perfect deity with complete manhood is impossible (*ἐὶ ἄνθρωπον τέλειον συνήφθη θεὸς τέλειος, δυο ἂν ᾖσαν*). Hence Apollinaris, in writing to the emperor Jovian, expressed himself as follows:

'We acknowledge, not two natures in the one Son, one worshipped and the other not worshipped (*μίαν προσκυνήτην καὶ μίαν ἀπροσκυνήτην*), but one nature of the Divine Word (*μίαν φύσιν τοῦ θεοῦ λόγου*), incarnate, and worshipped together with His flesh in one worship (*σεσαρκωμένην καὶ προσκυνουμένην μετὰ τῆς σαρκὸς αὐτοῦ μίᾳ προσκυνήσει*).' (Επιστολὴ πρὸς Ἰωβιανὸν τὸν βασιλέα [J. Dräseke, 'Apollinaris von Laodicea,' *TU* vii. (1892) 3, 4, p. 341; H. Lietzmann, 'Apollinaris von Laodicea und seine Schule,' *TU* i. (1904) 1, p. 250].)

This, however, involves a deification of the flesh, and it is but a short step to the inference that all the conditions which rendered the Logos liable to suffering during His earthly course are in the flesh brought into connexion with the divine nature (*παθητὴν εἶναι τὴν τοῦ θεοῦ θεότητα*).

For a time Christian theology was in danger of surrendering to this illusory logic, as was the case, e.g., when it undertook the task of coming to terms with the Antiochene school (see art. ANTIOCHENE THEOLOGY, vol. i. p. 584 ff.). The Christological interest of the Antiochenes, in contradistinction to that of the Apollinarians, culminated in the view that a perfect humanity was retained along with perfect deity in Christ. These theologians, accordingly, spoke of two natures (*δυο*

φύσεις or *δύο ὑποστάσεις*) in the one Christ—since for their conceptions, too, *φύσις* and *ὑπόστασις* were equivalent terms—and thus seemed to endanger the unity of His person. Their leading opponent, Cyril of Alexandria, was supremely concerned to maintain this unity, but he did it only by leaving out of account every element of human personality in the Saviour. According to Cyril, we must assume that two natures, the divine and the human, existed in Christ before He became man, and that at His becoming man these two natures were fused together in an indissoluble unity (*συν-ἔλευσις δύο φύσεων καθ' ἑνωσιν διδιδασκαστον ἀσυνγύτως καὶ ἀρρέτως*), and could thus be distinguished only in theory (*θεωρία μόνη*). To denote this divine-human nature Cyril likewise availed himself of the formula *μία φύσις τοῦ θεοῦ λόγου σεσαρκωμένη*; he borrowed it from a confessional work of Apollinarius—the *Περὶ τῆς σαρκώσεως τοῦ θεοῦ λόγου* (cf. *ERE* i. 608), of which, it is true, he believed that Athanasius was the author. We can see how closely he approaches Apollinarius at this point. The Alexandrian, nevertheless, did not proceed to the conclusions drawn by the Laodicean, who rejected the view that the Saviour had assumed a complete humanity and a *ψυχὴ λογικὴ*. To Cyril the formula remained a religious postulate, and he used all the resources of an artificial logic to give it also a theological validity. Here he takes *φύσις* simply as a *κοινὸν*; the divine-human nature, however, is something new in relation both to the divine nature and to human nature, and the properties of these, viz. sovereign majesty and passibility respectively, may be in mutual communication in Christ without forcing us to assume that there is any blending of them. In this way, accordingly, two natures go to form one (*ἐκ δύο φύσεων μία φύσις* [or *ὑπόστασις*]).

To follow such intricate theories was a task beyond the power of simple and unlearned minds. It is true that, of the subtleties of Cyril's discriminative logic, Eutyches, the aged archimandrite of a monastery near Constantinople, had come to a knowledge of the idea expressed in the phrase *μετὰ τὴν ἑνωσιν μία φύσις*, but precisely on that ground he would not grant that Christ's bodily form was identical in character with the human (*ὁμοούσιος ἡμῶν*); at the local Synod of Constantinople in 448, addressing the tribunal of bishops, he declared, *οὐκ εἶπον σῶμα ἀνθρώπου τὸ τοῦ θεοῦ σῶμα*; and, although in the course of the proceedings he further modified his statements, he was condemned on the ground of the Docetic tendencies which he could not conceal (see art. DOCETISM, vol. iv. p. 332 ff.). Thenceforward, in the memory of the Church the name of Eutyches was one of reproach, and Eutychianism was stigmatized as heresy. Another group who would not renounce the idea of *δύο φύσεις μετὰ τὴν σάρκωσιν* were those who in their deepest hearts assented to the formula *μία φύσις τοῦ θεοῦ λόγου σεσαρκωμένη* defended by Cyril. For them it served to ease the situation that a distinction was now being made between the terms *φύσις* and *ὑπόστασις*. This distinction, in fact, soon came to be quite as important as that between *οὐσία* and *ὑπόστασις* in the doctrine of the Trinity. In the development of that doctrine the latter distinction had served to make intelligible how three divine persons (*ὑποστάσεις*) could participate equally in the divine being (*οὐσία*); and in like manner it was now thought possible to explain how two natures (*φύσεις*), the divine and the human, could equally inhere in one person (*ὑπόστασις*), viz. Jesus Christ.

The theologians of the West, from the days of Tertullian, had been accustomed to speak of the 'duplex status, non confusus, sed coniunctus, in una persona, deus et homo Jesus.' What they

called *natura* (*substantia*) found an equivalent expression in *φύσις*, and *persona* could be rendered by *ὑπόστασις*. In reality, therefore, the best solution of the problem seemed to be that formulated by Pope Leo in his letter to Flavian of Constantinople (dated 449; the so-called *Τόμος Λέοντος*, *Ep.* xxviii., 'ad Flavianum') as follows:

'Salva proprietate utriusque naturae et substantiae et in unam coeunte personam suscepta est a maiestate humilitas, a virtute infirmitas . . . agit utraque forma (*μορφή*) cum alterius communione, quod proprium est . . . propter hanc unitatem personae in utraque natura intelligendam et Filius hominis dicitur descendisse de coelo . . . et rursus Filius Dei crucifixus dicitur et sepultus' (*PL* liv. 755 ff.).

What was subsequently termed the *communicatio idiomatum* (*ἀντιδοσις τῶν ἰδιωμάτων*) thus already finds clear expression in Leo's words. Nevertheless Gibbon is quite right in saying:

'An invisible line was drawn between the heresy of Apollinarius and the faith of St. Cyril; and the road to paradise, a bridge as sharp as a razor, was suspended over the abyss by the master-hand of the theological artist' (*Decline and Fall of the Roman Empire*, v. 126).

In point of fact, while Western theology thus avoided the extreme of Apollinarianism, it was menaced by the spectre of the Antiochene peril. Here too it could be said: 'incidit in Scyllam qui vult vitare Charybdin,' and at all events the doctrine of the two natures in one person (Dyophysitism, or, grammatically more correct, Diphyssitism) not only failed to compose perturbed minds, but actually fanned the latent elements of controversy into flame. In this controversy the disputants, moving on the lines of Cyril (and Apollinarius), went back to the watch-word *μία φύσις*; now, however, they spoke, not of the one incarnate nature of the divine word, but of the one nature of the incarnate word (*σεσαρκωμένον*, not *σεσαρκωμένη*), the intention being to indicate decisively that the point involved was not *μία φύσις* merely *μετὰ τὴν σάρκωσιν*. We now proceed to trace the history of this Monophysitism properly so called.

2. The Council of Chalcedon and its results.—After Cyril's death in 444 the episcopal throne of Alexandria was occupied by Dioscurus, a man destitute of theological learning and possessed with a more daring ambition than even his predecessor. His great aim was to secure the supremacy of Alexandria, and the Alexandrian theology, in the Eastern Church, and, as long as he had the ear of the emperor, and Rome did not contest his claims, he seemed to be on the fair way to attain his end. At his instigation Theodosius II. summoned a general Synod to meet in Ephesus in 449 (shortly afterwards stigmatized by Leo I. as *latrocinium*, *σύνodus ληστρικὴ*, 'the Robber Synod'). Here, with the assistance of the civil power, and the physical violence of fanatical Egyptian monks, he succeeded in giving full effect to his claims; and, while Eutyches, who enjoyed the protection of Dioscurus, was restored to the communion of the Church, Flavian of Constantinople, Domnus of Antioch, and Theodoret of Cyrus were deposed. The triumph of Dioscurus, however, was but short-lived, for not only did he damage his case by his ruthless dealings, but he committed the blunder of irritating Leo by refusing, in spite of the protest of the Roman legate, to have the *Epistula ad Flavianum* read at the Council. The result was a swift revulsion. The emperor died on 28th July 450, and his sister Pulcheria, the moving spirit of the administration, had even before his death come to recognize that the transference of the ecclesiastical centre of gravity from the capital to Alexandria, and the consequent liberation of the Church from political control, might be attended with the gravest consequences. As empress, with the acquiescence of her husband, the military commander Marcian, who was little interested in ecclesiastical or doctrinal affairs, she actively pro-

moted a plan of co-operating with Leo to put an end to the theological dispute at a great assembly of the Church and thus to restore the ecclesiastical balance in the East.

To achieve this desirable end was the task of the fifth Ecumenical Council, held in 451 at Chalcedon in the vicinity of Byzantium. The deposition of Dioscurus, as it could quite well be justified on grounds of ecclesiastical polity, was effected without difficulty. The demand that Leo's doctrinal letter should be accorded the authority of a symbol, however, was resisted with the utmost tenacity by a majority of the members. After protracted discussions the Council at length agreed—not, indeed, without menaces from the throne—upon a formulary designed to make for reconciliation, although, as a matter of fact, it involved, in its most decisive passage, a rejection of the Cyrillian tradition. The formulary, which was carried on 22nd Oct. 451, starts from a recognition of the Councils of Nicæa (325), Constantinople (381), and Ephesus (431), and reproduces the Nicene and the so-called Nicæno-Constantinopolitan creed; it then affirms that Cyril's letters to Nestorius and the Orientals, as well as Leo's *Epistle to Flavian*, have been adopted as attestations of the true faith. It next proceeds to the confession of belief in Jesus Christ as perfect God and perfect man, consubstantial with the Father according to His deity, consubstantial with us according to His humanity, in two natures (ἐν δύο φύσεσιν, not ἐκ δύο φύσεων as in portions of the literary tradition), without confusion or change, without division or separation (ἀσυγχύτως, ἀτρέπτως, ἀδιαιρέτως, ἀχωρίστως). The confession ends with a statement already quoted from Leo's letter, now rendered as follows:

τῆς τῶν φύσεων διαφορᾶς ἀνηρημένης διὰ τὴν ἑνωσιν, σωζομένης δὲ μάλλον τῆς ἰδιότητος ἐκαστῆς φύσεως καὶ ἐν ἐν πρόσωπον καὶ μίαν ὑπόστασιν συντηροῦντος.

A decree, promulgated (7th Feb. 452) by the two emperors Marcian and Valentinus III., imposed severe penalties upon all who should henceforth dispute in public regarding the faith; offending clergy and army officers should be deprived respectively of their priestly and military status, and others proceeded against by law. Dioscurus was exiled to Gangra in Paphlagonia, where he died in 454.

The results of the Council were not long in manifesting themselves. In *Palestine* an active revolt broke out among the monks. Juvenal, bishop of Jerusalem, who had become prominent at Ephesus (449) as an energetic partisan of Dioscurus, had at Chalcedon, in fear of a diminution of his ecclesiastical power, deserted the Alexandrian and his protégé Eutyches, and had also accepted the formula, taking part, indeed, in its final revision. By this defection he lost the confidence of a large and influential body of monks in Palestine, who elected the monk Theodosius as bishop in opposition to him. The spiritual leader of the insurgents was Peter the Iberian, monk and bishop of Mayuma, the port of Gaza. The rebellious monks found a patroness of high rank in the empress-dowager Eudocia, then resident in Jerusalem. It is told of one of these fanatics that, when Leo's *Epistle* was brought to him, he took it to the tombs of the Fathers and asked whether he should accept it or not, and that a voice cried from the tomb:

'Cursed be the ungodly Leo, robber of souls, as his name signifies; cursed be his profane *Tomus*; cursed also be Marcian and the ungodly Pulcheria; cursed be Chalcedon and its Symbol and all who yield acceptance to it; cursed be he who acknowledges two natures in Christ, the Son of God, after the union' (E. Renaudot, *Hist. patriarcharum Alexandrinorum Jacobitarum*, Paris, 1718, p. 120).

This wild outburst of hate expresses most appositely the state of feeling then prevalent in Palestine.

By A.D. 453, however, the movement was suppressed for the time by military measures.

In *Egypt* the situation was still more troublesome. A certain Proterius was forcibly thrust by the government upon the Alexandrians as bishop in place of Dioscurus. On the accession of the emperor Leo I. (457-474), the presbyter Timotheus Aelurus (i.e. 'the Weasel'), who had been on friendly terms with Cyril and was known as a rigid Monophysite, was raised to the episcopal throne by methods of sheer violence. At Easter, 457, Proterius was murdered by the populace in the baptistry of the cathedral church, while Timotheus purged the Egyptian sees of Diphysites, and pronounced the anathema upon Chalcedon ('the Synod,' as it now comes to be called in the sources). Timotheus held his position until 460, when, after fierce conflicts, he was driven from Alexandria and banished to Gangra; he was subsequently sent to Cherson, and there devoted himself to the composition of a 'Refutation of the doctrine laid down at the Synod of Chalcedon,' a work which only recently (1908) came to light in an Armenian translation.

The patriarchate of *Antioch* was likewise kept in a state of unrest by long protracted dissensions. Here the presbyter Petrus Fullo (Γραφεύς, 'the Fuller'), who in no long time supplanted Bishop Martyrius, zealously opposed the teaching of the Council, and contended for the doctrine that God had been crucified (ὅτι θεὸς ἐσταυρώθη). To the liturgy he added the singing of the Trisagion (Is 6th) supplemented by the phrase ὁ σταυρωθεὶς δι' ἡμᾶς; and he also introduced the 'Credo' (the Nicene) into the Mass, probably with a view to emphasizing his opposition to the Chalcedonian formula, as also, however, to Eutychianism. But his tenure of the see did not last long, for in 471 the emperor Leo ordered him to be deposed. The imperial government thus found itself confronted by a serious task. On the one hand, it was a matter of urgency to preserve unity between East and West, between Byzantium and Rome, and this could be done only if there was no deflexion from the lines marked out at Chalcedon; on the other, those in the East whose dissatisfaction and resentment were due to the Council had to be restrained, pacified, and, if possible, reconciled to what had been done. The emperors Zeno (474-491) and Anastasius (491-498) exerted all their energies to establish ecclesiastical equilibrium in the East, but they failed altogether in the task of maintaining peace with Rome at the same time. A proceeding of signal importance was the attempt of Zeno (482) to gain acceptance for a new formulary, the so-called *Henotikon*, in place of the Chalcedonian symbol. The *Henotikon* was designed to give emphatic expression to what was common to all parties, and accordingly it recognized the Councils of Nicæa, Constantinople, and Ephesus as witnesses to the faith, disclaimed Nestorius and Eutyches, and condemned every one who 'now or ever, at Chalcedon or elsewhere, thought or thinks otherwise.' The formula expressing the doctrine of the natures of Christ were adroitly kept in the background, so that every cause of offence might be removed. In spite of all, however, the project of the emperor failed of complete success. It is true that Acacius, the court-patriarch of Constantinople, and Petrus Mongus (i.e. 'the Stammerer'), who now occupied the episcopal chair of Alexandria instead of Timotheus Aelurus, worked straightforwardly for the union of the warring factions, but the policy of reconciliation was repudiated by the uncompromising Monophysites, especially in Egypt, where the extremists (ἀκρόβατοι) actually severed themselves from the rest of their party. On the other hand, the convinced Diphysites, including the Acemete

monks of Constantinople, bitterly resented the virtual repudiation of Chalcedon. The most serious result was the rupture of good relations with Rome. This was due in part, no doubt, to the dogmatic problem, but certainly not less to jealousy of the ever-growing ascendancy of the Constantinopolitan bishop as 'ecumenical patriarch'—a title that now begins to gain currency. Thus the rupture of communion between East and West which was brought about in 484 by Felix III. of Rome presents itself as the outcome of an inner necessity. That ecclesiastic excommunicated Acacius, and demanded that in the *causae Dei* the emperor should subordinate his own will to that of Christ's priests. The two communions remained apart for thirty-five years. The first overtures for peace were made by the emperor Anastasius in negotiations with Pope Hormisdas, the proposal of calling another general synod being taken as a basis; but the demands of the Roman pontiff, who insisted upon the recognition of Chalcedon and the condemnation of the now long deceased Acacius, brought the negotiations to an end. It was not till the accession of Justin I. (518-527), who left the administration of affairs to his nephew Justinian, that the hour of re-union struck. To win Rome seemed well worth a sacrifice; and all Rome's conditions were accepted, the name of Acacius, as well as those of the emperors Zeno and Anastasius, being removed from the diptychs of the Church.

This renewal of amity with Rome, purchased at so great a cost, carried with it, of course, a complete rupture with the Monophysites. During the reign of Anastasius the latter had gradually won a position of greater influence in Church politics. Anastasius too, no doubt, tried to steer a course in line with the Henotikon, but his own Monophysite convictions tempted him, especially towards the close of his reign, to show an imprudent complaisance to the more fiery and impetuous spirits in the Monophysite camp, and it is not without good cause that his name stands in the Monophysite calendar of saints. The aggressive movement of the malcontents began in Syria, where the Monophysites, under the leadership of Severus of Antioch and Philoxenus of Hierapolis (cf. § 3), gained an ascendancy over the Henotacists. At the Synod of Tyre (513, or, more probably, 515) they renounced the Council of Chalcedon, and thus publicly proclaimed their repudiation of the policy directed from Constantinople. Palestine, too, was the scene of a Monophysite reaction, while in Egypt they completely gained the upper hand. The change of policy begun in Justin's reign was dictated mainly by a desire to put an arrest upon these successes. A fierce persecution was the result, especially in the diocese of Antioch, many bishops, including Severus and Philoxenus, being banished from their sees.

3. **The Monophysite theology.**—The views of the Monophysites regarding the theological problem were by no means homogeneous. The one point in which the sect were unanimous was their opposition to Leo's *Tomus* and the symbol of Chalcedon—that idol with the two faces, as Zacharias Rhetor called it. Only a few of them drew from the doctrine of the one nature the Docetic inferences of Apollinaris or even of Eutyches. The majority tried to keep to the lines marked out in the theology of Cyril. This was the case, e.g., with Timotheus Aelurus, and, above all, with Severus of Antioch, ecclesiastically the most influential, and theologically the most outstanding, champion of moderate Monophysitism, while Julian of Halcarnassus and Philoxenus of Hierapolis were more extreme in their views.

Severus, born c. 465 at Sozopolis in Pisidia, was the grandson of a bishop and the son of a town-councillor. He studied

grammar and rhetoric at Alexandria and law in Beirut. While in Alexandria he had been in touch with pietistic circles (*φιλόνικοι*), but was converted through the influence of Zacharias Scholasticus, subsequently his biographer, in Beirut. He was baptized, and gave himself devotedly to fasting and prayer. In a short while he joined the monks of Peter the Iberian's monastery at Mayuma; for a time he lived as a hermit in the Desert of Eleutheropolis, and afterwards built a monastery of his own, soon winning great renown as a director of souls. In 508-511 we find him in Rome, acting as the representative of the monks who were being persecuted for their Monophysite principles. At the court of Anastasius he laboured for the principle of the Henotikon. At the expulsion of Flavian he was raised, despite the opposition of the suffragan bishops, to the patriarchal chair of Antioch (6th Nov. 512). The Synod of Tyre (515; cf. § 2) marks the summit of his work as an ecclesiastic. He was very active in the visitation of his diocese, and was most willing to preach either within or beyond the confines of his episcopal city. At the accession of Justin (Sept. 518), however, he was driven from his see, and fled to Alexandria. Considerably later, the administration of Justinian seemed to open a prospect of further ecclesiastical activity for Severus, who expected that the conferences in Constantinople (538) would set the seal of success upon his efforts. But the fall of Anthimus (cf. § 4) brought disaster to him too; he was excommunicated in 536, and withdrew to the desert country southwards from Alexandria. He died at Xoia, on the Sebennitic arm of the Nile, probably on 8th February 538 (not 543).

Of his numerous writings all that has come down to us in Greek is fragments in Catena and anthologies. There are, however, Syriac translations of his works by Paul of Callinicos, Jacob of Edessa, and others. Of his exegetical and doctrinal writings may be mentioned *ἀποκρίσεις πρὸς ἑντρεῖς ἐκκοινοῦσιν*, and *κατὰ Ἰωάννην γραμματικὸν τοῦ Καισαρείας*. Other writings worthy of note are his *λόγοι ἐκθρόνοι* or *ἐνθρονιστικοί* (125 homilies dating from the years he spent in Antioch, ed. R. Duval and others in the *Patrologia Orientalis*, Paris, 1906 ff.), his letters, extant in 23 books (bk. vi. ed. E. W. Brooks, London, 1902-04), and his hymns (the so-called *Octoechos*, ed. E. W. Brooks, *Patrologia Orientalis*, 1910; cf. also art. HYMNS [Greek Christian], vol. vii. p. 8^o).

Philoxenus, whose native name was Xenaya, was a student in Edessa while Ibas was bishop of that city, and we may thus infer that he was born c. 450. From Edessa he went to Antioch, where his ardent championship of the Henotikon brought him into conflict with the patriarch Kalandion, who had him expelled from the city. In 485 he was ordained by Peter the Fuller as Metropolitan of Hierapolis (Mabug). From the time when Flavian of Antioch, who was an adherent of Chalcedonian views, held office, Philoxenus appears as the spokesman of the Monophysite party in the patriarchate; subsequently, however, he was thrown into the background by Severus. Like the latter, he was eventually exiled (518 or 519), being sent first to Thrace, and then to Gangra in Paphlagonia, where, perhaps in 523, he died a violent death. He ranks as one of the most eminent of Syrian writers, though most of his works still lie dormant in the British Museum and other libraries; of those that have been published the most important is the *Discourses on Christian Doctrine* (tr. E. A. W. Budge, London, 1894-95).

Our knowledge of Julian rests upon very meagre data. The date of his birth is unknown. While bishop of Halcarnassus in Caria, he was concerned in the intrigues which led to the downfall of Macedonius, patriarch of Constantinople, in 511. He was himself expelled from his bishopric in 518, and took up his abode in the monastery of Enaton, outside the gates of Alexandria. Here he was embroiled in a doctrinal controversy with Severus (see below), who was then resident in that city, and this resulted in a temporary rupture within the party. At the death of the Monophysite patriarch Timotheus IV. the followers of Julian were able to secure the chair for their candidate, Gaianus, in place of the regularly elected Theodosius, and Theodosians and Gaianites were soon involved in a bitter strife. Of Julian's later fortunes we have no knowledge, nor, indeed, can we say definitely whether he was alive when, for the second time, the ban was pronounced upon him at Constantinople in 538. Of his writings we still possess a number of letters from his correspondence with Severus, and a Commentary on Job, transmitted in a Latin translation, and wrongly ascribed to Origen.

It was far from the minds of Severus and those who shared his views to argue for a fusion of the divine and the human in the person of Christ. Their insistence upon the singleness of Christ's nature after the Incarnation rested upon their conviction that the hypothesis of two natures necessarily implied two subjects or individual entities. What they found specially objectionable was the inference drawn in Leo's letter from the permanently distinct character of each nature—the inference, namely, that in the unity of Christ's person each nature, while no doubt in communication with the other, maintains its own distinctive function. According to the Monophysites, the theory that ascribed to each of the two natures a distinct mode of action (*ἐνέργεια*)

divided the one Christ into two *πρόσωπα*, since no nature could possibly assert itself (*ἐνεργεῖν*) that did not remain self-subsistent (*ὑποστασθεῖν*); the hypothesis of two *φύσεις* led to that of two *ὑποστάσεις*, and so to the abhorred heresy of Nestorius. In conformity with the position of Cyril, and with a mode of expression first met with in the writings of pseudo-Dionysius the Areopagite, viz. *ἀνδρῶβελι θεός* and *His καὶνὴ θεανδρική ἐνέργεια* (cf. art. MONOTHELETISM, § I, p. 822*), Severus took as the basis of his speculations the inherently complete divine nature and person of the Logos. The Logos, in His act of assuming flesh—flesh animated by rationality—becomes flesh and man, and, as man, is born of woman, but still remains, even as He had been, One, since, in virtue of such an indissoluble union, and without detriment to His inherent character, He transmutes and transfigures the flesh with His own glory and power. The united elements thus form a composite nature and a divine-human hypostasis, and it is to this that all His activities are to be traced.

The thesis that the body of Christ was subject to the laws of nature was deemed of the utmost importance by the Severians and Theodosians, who saw in it an expression of the identity of essence between that body and our own, and were thus able to avoid the heresy of Eutyches. It was precisely this thesis, however, that gave offence to the extremists of the party. To Julian and his followers it was simply inconceivable that Christ's body had been subject to corruption (*φθορά*), which has been a characteristic of human nature since the Fall. In order to understand the precise usage of this term in the present connexion, we must note that it did not refer to the *φθορά* which denotes the complete dissolution of the body into its elements at death; all parties were at one in asserting that Christ's body was not subject to *φθορά* in that sense, i.e. as decomposition. The question at issue here had to do with the natural infirmities of the human body (*ἀνθρώπινα πάθη*)—its liability to hunger, thirst, weariness, sweating, weeping, bleeding, and the like. The view of Julian, Philoxenus, and the Gaianites was that, while Christ certainly hungered and thirsted, it was because He desired, not because He required (*οὐκ ἀνάγκη φύσεως*), to do so—because, in short, according to the divine counsel (*κατ' οἰκονομίαν*), He had voluntarily taken upon Himself human pains and needs. He was the Son of man, as man was before the Fall, while all other men, though sons of Adam too, were possessed of a body and a soul of a nature that was due to Adam's fall.

We are thus able to understand the heretical designations applied by the warring Monophysite parties to one another. The Julianists or Gaianites charged their opponents with phthartolatry, the worship of the corruptible. These 'phthartolaters,' however, retorted upon their accusers with the epithet 'aphthartodocetists' or 'phantasiasts,' i.e. those who would change the reality of Christ's human experience into a mere appearance. As a matter of fact, the latter view was quite a natural inference, and many of the extremists were led astray by it. The most extravagant view seems to have been reached by those Gaianites who asserted that the body of Christ, from the moment of its union with the Logos, should be regarded not only as uncorrupted (*ἀφθαρτον*) but also as uncreated (*ἀκτιστον*). These were stigmatized as 'aktistetes' by their opponents, whom in return they called 'ktistolaters,' i.e. 'worshippers of that which was created.' Divisions arose even among the Severians themselves. Themistius, a deacon, taking his stand upon such Scripture passages as Mk 13³⁵ and Jn 11³⁴, maintained that, as the body of Christ was subject to natural conditions, so its

animating spirit could not be regarded as omniscient. To the adherents of this doctrine their opponents applied the name 'agnoetes.'

4. Justinian and the new orthodoxy.—On 1st August 527 Justinian became sole emperor of Rome. It does not fall to us here to set forth fully his far-reaching ecclesiastical policy in its transforming effect upon all things. The decisive factor in his attitude towards the West was his recognition of the Roman chair as the supreme tribunal of the Church, though this did not prevent him, after his victory over the Goths, from giving the popes an experience of his autocratic power. The defection of the Eastern Church gave the imperial ecclesiastic many an anxious hour. He soon came to recognize that his persecution of the Monophysites (see § 2 at end) had been a grave error. Little as he might wish to displace once more the orthodoxy now officially recognized, he could hardly help desiring to reconcile the Monophysites, especially as the empress Theodora was working with growing fervour for the rehabilitation of the party with which she sympathized in her devout moods. A few years after Justinian's accession to the throne, accordingly, negotiations were opened with the insurgents, and the most eminent of the bishops deposed in 518—not, however, including Severus—were summoned to Constantinople, where, it was hoped, they would be won over at a religious conference. In this conference, on the orthodox side, only such theologians were to take part as unequivocally accepted the thesis that one of the Trinity had suffered in the flesh (*ἕνα τῆς τριάδος πεπονθέναι σαρκί*). This Theopaschite formula was manifestly a friendly overture to the Monophysites. But the 'Collatio cum Severianis' (533 [or 531]), after two days of verbal controversy, came to nothing. On 15th May 533 Justinian issued an enactment in which he once more declared Chalcedon to be a standard of faith co-ordinate with the three earlier councils. The negotiations with the Monophysites were, nevertheless, still proceeding, and communications were now opened with Severus as well. Severus, yielding to reiterated pressure, went at length to the capital, where in 535 Anthimus, a protégé of the empress Theodora and a theological partisan of Severus himself, had been raised to the episcopate. But the interlude was not of long duration. In the following year (536) Pope Agapetus was able so to influence the emperor that the doctrinally suspect patriarch was superseded by the orthodox Menas. It is nevertheless the case that, during the entire reign of Justinian, the Monophysites firmly maintained their position at the court, while in Syria and Egypt their ecclesiastical power was supreme (cf. § 5).

Justinian himself made zealous efforts to comprehend the points of the doctrinal controversy. His great aim was to reconcile the teaching of Cyril and the Symbol of Chalcedon. In this he found effective support in that most eminent of his theologians, Leontius of Byzantium († 543 as a monk in Palestine), who, in his *Ἐπιστολὴ τῶν ὁπὸ Σεβήρου προβεβλημένων συλλογισμῶν, κατὰ Νεστοριανῶν καὶ Εὐτυχιανιστῶν* and other writings, won renown as a prolific author and an able assailant of the Severian Christology. The theology of Leontius is based wholly upon the Aristotelian logic. A novel feature of it, however, was his ingenious application of the idea that the *ὁμοσθέναι* of Christ's human nature was *ἐν τῷ λόγῳ*, so that that nature is not *ἀνυπόστατος*, but *ἐνυπόστατος*. The term 'enhypostasis' operated like a spell. It seemed to obviate in the happiest way all the difficulties that beset the doctrine of the God-man. By its means the Chalcedonian Symbol could, without violation of its actual words, be interpreted in the sense of

Cyri's doctrine. It was nevertheless the use of this expression that led to the introduction of scholasticism into the Byzantine theology.

Justinian died in 565. Under his successors the Monophysites of the city and diocese of Constantinople had much to bear, and their harsh experiences have been graphically described by John of Ephesus, himself a Monophysite, in his *Church History*. Negotiations for a union of the warring factions, it is true, were once more resumed, but were foredoomed to failure by the circumstance that the ecclesiastics of the imperial court would not surrender the understanding with Rome, while the Monophysites regarded that understanding as the root of all evil. The consequence was that in the course of the 6th cent. the Monophysite communities in the Byzantine patriarchate were destroyed one after another. The Churches of Egypt and the Eastern provinces, on the other hand, remained quite impervious to the ecclesiastical influence of the capital, and the severance of the purely Monophysite communion from the Catholic Church became ever the more complete.

5. The independent Monophysite churches.—The Monophysites of Syria never ceased to regard the banished Severus as the rightful patriarch of Antioch, and declined to recognize the standing of those who were successively appointed to the office by the emperor. The organizer of their church life was Jacob Barādai (i.e. 'he with the horse-cloth'; † 578), who, originally a monk in Constantinople, had been ordained, c. 541, bishop of Edessa by Theodosius of Alexandria (cf. § 3), then also resident there; and in consequence the Syrian Monophysites came to be called Jacobites. Barādai, in his long journeys in W. Asia and Egypt, instituted communities, and consecrated patriarchs, bishops, presbyters, and deacons. The chief representatives of literature in Syria were nearly all Monophysites.

In addition to Severus, Philoxenus, and Julian (cf. § 3), the following writers of the earlier period deserve mention: Jacob of Sarug († 521), the author of widely read metrical homilies, which earned for him the title of 'Flute of the Holy Spirit'; Sergius of Resaina († 536), physician and priest, who translated into Syriac several works of Aristotle and Galen, as also of the pseudo-Dionysius Areopagita; Jacob of Edessa († 708), equally renowned as theologian, liturgical writer, philosopher, historian, exegete, and grammarian; George, bishop of the nomadizing Arabs, a writer whose letters have come down to us in large numbers. Of the mediæval authors one of the most prominent was Bar Hebraeus (Abulfaraj; † 1286), whose *Chronicle* forms one of the most important sources of information regarding Monophysitism.

From the time when Islām became the dominant power in Syria, the Jacobites decreased in numbers more and more. At the present day there are some 200,000 of them in the Turkish empire, and about 1,000,000 in India—on the Malabar coast and in Ceylon. Their ecclesiastical superior (formerly entitled 'maphrian', now 'katholikos') resides in the monastery of Deir-Safaran, near Mardin. Efforts made by the Jacobites, from the close of the 18th cent., to effect a union with Rome had a very meagre result. At the present day the Roman Catholic Syrians number about 30,000, and are subject to a patriarch, who takes his title from Antioch, but lives in Mardin.

In Egypt the conflicts between the Severians and the Julianists or Gaianites (cf. § 3) at length ruptured the unity of Monophysitism, which, nevertheless, became the faith of nearly the whole Coptic population. The patriarch of the orthodox, the Melchites (i.e. 'Imperials'), who was also procurator of the province, could count upon the homage of very few outside the higher official ranks in Alexandria and some of the larger towns. The Monophysite propaganda was carried also to the Nubians and the Alodians. From 616 marauding bands of Persians ravaged the religious stations on the Upper Nile, and it was only after the

Arabs, with the hearty good-will of the Copts, took possession of the country that the Monophysite patriarch ventured to leave his place of refuge in the Upper Egyptian desert. During the Middle Ages the condition of the Coptic Church was a fairly prosperous one, but subsequently it was sorely harassed and ravaged by Muslim fanaticism, and it is only within recent times that it has been able to make a fresh advance. The Christian Copts of the present day still maintain their Monophysite creed (see, further, art. COPTIC CHURCH).

Finally, Monophysitism penetrated also to Armenia. The Armenians, while still engaged in battling for their own faith with Parsi Mazdæism, were quite unaffected by the dogmatic controversies of the Imperial Church. The expanding propaganda of the Persian Nestorians, however, induced them to adopt the Henotikon of Zeno (cf. § 2). Thereafter they maintained close relations with the Syrian Monophysites, and at the Council of Dvin, in 554, they overtly accepted the more radical position represented by Julian of Halicarnassus. From that time they have remained faithful to Monophysitism, though they subsequently gave their adherence to the more moderate Severian school.

LITERATURE.—i. SOURCES.—(a) Decrees of the Councils, Declarations of Synods, papal briefs

(b) *Historical works and Chronicles*.—Zacharias Rhetor (Scholasticus), shortly after the accession of Anastasius, wrote, from the Henotic standpoint, a record of ecclesiastical events from the Council of Chalcedon to the death of Zeno (extant only in a Syriac version; see below, under *Historia Miscellanea*); Theodorus Lector, Anagnostes in the Church of St. Sophia in Constantinople at the beginning of the 6th cent., wrote, from the orthodox standpoint, a history of the Church from Nestorius to Justin I., which now exists only in fragments; Johannes Malalas, *Chronography*, composed in Justinian's reign; Evagrius, *Ecclesiastical History*, written after 546 (ed. J. Bidez and L. Parmentier, London, 1899); Theophanes Confessor, *Chronography*, composed between 810 and 815 (ed. C. de Boor, Leipzig, 1883–85). Of the Latin chronicles Liberatus, *Breviarium causarum Nestorianorum et Eutycharianorum*, is worthy of note. The most important of the Syrian authorities are: *Chronicon Edessenum* (ed. I. Gudi, in *Corpus Scriptorum Christianorum Orientalium*, 'Chronica Minora,' t. I, Paris, 1903), dating from the middle of the 6th cent.; *Historia Miscellanea*, a compilation of the same period by an unknown Monophysite writer, and including the history of Zacharias Rhetor mentioned above (ed. K. Ahrens and G. Krüger, Leipzig, 1899; also F. J. Hamilton and E. W. Brooks, London, 1899); John of Ephesus († c. 585), *Ecclesiastical History* (3rd part ed. W. Cureton, Oxford, 1853).

(c) *Various*.—The *Plerophories* of Johannes Rufus of Mayuma, a collection (c. 515) of the sayings, prophecies, visions, and revelations of various distinguished Monophysites, and especially of Peter the Iberian (ed. F. Nau, in *Patrologia Orientalis*, Paris, 1911); the biography of Peter the Iberian, probably by the Johannes Rufus just named (ed. R. Raabe, Leipzig, 1895); *Vita vivorum apud Monophysitas celeberrimorum* (ed. E. W. Brooks, in *Corpus Script. Christ. Orient.*, 'Scriptores Syri,' iii, xxv., Paris, 1903); the biographies of the Syrian monks Euthymius and Sabas, by Cyril of Scythopolis († after 557), etc.

ii. *MODERN WORKS*.—L. S. Le Nain de Tillemont, *Mémoires pour servir à l'hist. ecclésiastique des six premiers siècles*, Paris, 1701–12, xv. t., E. Gibbon, *The Hist. of the Decline and Fall of the Roman Empire*, ed. J. B. Bury, 7 vols., London, 1901–06, and C. W. F. Walch, *Hist. der Ketzereien . . . bis auf die Zeiten der Reformation*, Leipzig, 1762–85, vi.–viii., are still indispensable. Of more recent works on the general history of the period the following deserve special mention: J. B. Bury, *A Hist. of the Later Roman Empire*, London, 1889; H. Gelzer, 'Abriss der byzantinischen Kaisergeschichte,' in K. Krumbacher's *Gesch. der byzantinischen Literatur*, Munich, 1897; C. Diehl, *Justinien et la civilisation byzantine au VI^e siècle*, Paris, 1901; and W. G. Holmes, *The Age of Justinian and Theodora*, London, 1905–07. On the questions of literary history the reader should consult (in addition to Krumbacher) W. Wright, *A Short Hist. of Syriac Literature*, London, 1894, and R. Duval, *La Littérature syriaque*, Paris, 1907. Of Histories of the Church and of Dogma, the most important are the following: I. A. Dorner, *Entwicklungsgesch. der Lehre von der Person Christi*, ii, 2, Berlin, 1853 (Eng. tr., Edinburgh, 1861–88); C. J. von Hefele, *Conciliengeschichte*, Freiburg, 1873–90, ii. (1875) (best form now in the Fr. revised ed. of H. Leclercq, Paris, 1907–13); A. Harnack, *Lehrbuch der Dogmengeschichte*, Tübingen, 1900–10, ii. (Eng. tr., London, 1894–99); L. J. Tixeront, *Hist. des dogmes dans l'antiquité chrétienne*, 3 vols., Paris, 1906–12, ii.; L. Duchesne, *Hist. ancienne de l'église*, Paris, 1906–10 (only to the close of the 5th cent. A.D.),

ii. : the best monograph on the subject is J. Lebon, *Le Monophysisme syrien*, Louvain, 1909. In writing the present article the author has drawn upon his contributions to *PRÆ* ('Julian von Halikarnass', 'Justinian I.', 'Monophysiten', 'Philoxenus', 'Severus', 'Zacharias Scholastikus', etc.), and upon his *Handbuch der Kirchengeschichte*, I (Tübingen, 1911); additional literature will be found both in the articles and in the book.

G. KRÜGER.

MONOTHEISM.—In the history of religion monotheism, the doctrine that 'there is one God,' or that 'God is One,' is somewhat sharply opposed to a very wide range of beliefs and teachings. The contrast, when it appears in the religion of a people, or in the general evolution of religion, tends to have an important bearing both upon religious practices and upon religious experience, since to believe in 'One God' means, in general, to abandon, often with contempt or aversion, many older beliefs, hopes, fears, and customs relating to the 'many gods,' or to the other powers, whose place or dignity the 'One God' tends henceforth to take and to retain. If these 'many,' as the older beliefs, which some form of monotheism replaces, had dealt with them, were themselves for the older faiths 'gods,' then the monotheism which is each time in question opposes, and replaces, some form of 'polytheism.' This is what happened when Judaism and Muhammadanism replaced older local faiths. If one were satisfied to view the contrast in the light of cases closely resembling these, and these only, then the natural opponent of monotheism as a belief in 'One God' would appear to be, in the history of religion, polytheism as a belief in 'many gods.'

Since, however, there are various religions and many superstitions which recognize the existence of powers such as, despite their more or less divine character, lack some or all of the features which naturally belong either to God or to gods, and since demons, the spirits of the dead, or magic powers may be in question in such religions, the name 'polytheism' can hardly be quite accurately applied to the whole class of beliefs which are in any important way opposed to monotheism. So, in the history of religion, monotheism has two opponents: (1) polytheism proper, and (2) beliefs that recognize other more or less divine beings besides those that are properly to be called gods.

In the history of philosophy, however, monotheism has a much narrower range of contrasting or opposing beliefs. Polytheism, as an explicit doctrine, has played but a small part in the history of philosophy. To the doctrine 'God is One' or 'There is one God,' where this doctrine forms part of a philosophy, there are opposed forms of opinion which are often classified under three heads: (1) philosophical pantheism, (2) philosophical atheism, (3) philosophical scepticism regarding the divine beings. The modern name 'agnosticism' has been freely used for a philosophical scepticism which especially relates either to God or to other matters of central interest in religion.

Frequently, in summaries of the varieties of philosophical doctrine, the term 'pantheism' has been used as a name for such philosophical doctrines as 'identify the world with God.' Pantheism is often summed up as the doctrine that 'All is God,' 'Everything is God,' or, finally, 'God is everything.' But a more careful study of the philosophical doctrines which have gone under the name of pantheism, or which have been so named by their opponents, would show that the name 'pantheism' is too abstract, too vague in its meaning to make any clear insight easily obtainable regarding what ought to constitute the essence of a philosophical pantheism as opposed to a philosophic monotheism. The two propositions (1) 'God is One,' and (2)

'God is identical with all reality,' or 'with the principle upon which all reality depends,' are not, on the face of the matter, mutually contrary propositions. How far, in reference to a given creed, or theology, or religious tradition, the first proposition appears to be contrary to the second depends upon the special interpretation, and sometimes upon the special prejudices of critics, sects, or philosophers of a given school.

One who asserts the 'unity of God' may or may not be laying stress upon the fact that he also makes a sharp distinction between the reality called God and other realities—e.g., the world. That such sharp distinctions are often in question is an important fact in the history of philosophy. Nevertheless the doctrine that 'God is One' has been philosophically maintained at the same time with the doctrine that 'God is all reality.' For such a view, the two doctrines would simply be two ways of expressing the same centrally important fact. One who wishes to understand the numerous controversies, subtle distinctions, and religious interests which at one time or another have been bound up with the name 'pantheism' must be ready to recognize that the term 'pantheism,' when used without special explanation, is a poor instrument for making clear precisely where the problem lies. In brief, one may say that, while the term 'pantheism' has been freely employed by philosophers, as well as by those who are devoted to practical religious interests, it is, as a historical name, rather a cause of confusion than an aid to clearness. The proposition, 'God is One,' has, despite the complications of doctrine and of history, a comparatively definite meaning for any one who advances a philosophical opinion concerning the nature of God. But the proposition, 'God is all,' or 'God is all reality,' has, in the history of thought, no one meaning which can be made clear unless one first grasps all the essential principles of the metaphysical doctrine of the philosopher who asserts this proposition, or who at least is accused by his critics of asserting it.

If we endeavour, then, to make clearer the essential meaning of the term 'monotheism' by contrasting the historical forms of monotheism with philosophical doctrines which have been opposed to it, we may attempt to solve the problem of defining what is essential to philosophical monotheism by dwelling upon a contrast which, especially in recent discussion, has been freely emphasized. One may assert, e.g., that in speaking of the nature of the 'One God' who is the essential being of monotheistic belief, either (1) one holds that God is 'immanent' in the world, thus asserting the doctrine of the 'divine immanence,' or (2) one holds to the doctrine of the 'transcendence' of God, thus asserting that the divine being in some fashion 'transcends' the world which He has created or with which He is contrasted. But here, again, one deals with two doctrines which, in certain philosophical contexts, do not appear to stand in contrary opposition to each other. For, as is well known, there are philosophies which insist that God is in a certain sense 'immanent' in the world, and also in a certain sense 'transcendent' in His relation to the world. Aristotle, in a well-known passage (*Met.* xii. 10), gave a classic expression of the relations of the doctrines which are here in question, when he stated the question as to whether the divine being is related to the world as the 'order' is to the army, or as the 'general' is to the army. Aristotle replied by saying that 'in a certain sense' God is both the 'order' of the world and the 'general,' 'although rather the general.' Thus the opposition between divine immanence and divine transcendence does not precisely state the issue and class of issues which one finds play-

ing the most important part in the history of philosophical monotheism (see art. IMMANENCE).

Another attempt to get the issue between monotheism and the contrasting or opposed philosophical doctrines clearly before the mind may take the well-known form of declaring that monotheism, properly so called, lays stress upon the 'personality of God,' while the opposed or contrasting doctrines, which so often are regarded as constituting or as tending towards pantheism, have as their essential feature the tendency to view God as 'impersonal.' From this point of view, it would be of the essence of monotheism to declare that the One God is a person, while it would be of the essence of those doctrines which are opposed to monotheism to declare, in a fashion which might remain simply negative, that the divine being is not personal. It would then remain for further definition to consider whether the divine being is 'superpersonal' or is 'merely material,' or, again, is 'unconscious,' or is otherwise not of a personal character.

But the difficulty in this way of defining the contrasts which have actually appeared in the history of thought lies in the fact that the very conception of personality is itself, in the history of philosophy, a comparatively late as well as a decidedly unstable conception. It is fair to ask how far the most widely current modern ideas of personality were present to the minds of such Greek philosophers as Plato and Aristotle. All the ideas of personality which philosophers may now possess have recently been vastly influenced by the whole course of modern European civilization. The problem of how far the Occidental and Oriental minds agree regarding what a 'person' is is one about which those will be least likely to dogmatize who have most carefully considered the accessible facts. In fact, the whole experience of the civilized consciousness of any nation or philosopher is likely to be epitomized in the idea of personality which a given philosophy expresses. It seems, therefore, inconvenient to make one's classification of the philosophical doctrine about the nature of God depend upon presupposing that one knows what a philosopher means by the term 'person.' It is true that whoever makes clear what he means by 'person' will thereby define his attitude towards nearly all fundamental philosophical problems. But the idea of personality is, if possible, more difficult to define than any other fundamental philosophical idea. Therefore, to define monotheism as a 'belief in a personal God' will give little aid to the understanding of what sort of belief is in question, so long as the idea of what constitutes a person remains as obscure as it usually does.

A still further effort has been made to define monotheism by making explicit reference to philosophical doctrines concerning the question whether the world was created or is self-existent. As a matter of fact, that set of Christian theological doctrines and of scholastic interpretations of Aristotle which goes by the name of 'creationism' has played an important part in the history of the more technical forms of monotheism. Yet the issues regarding creation are, after all, special issues. How they bear upon the problem of monotheism can hardly be understood by one who has not already defined monotheism in other terms. Creationism is the familiar doctrine that 'the world was created by God.' This doctrine can become clear only if one first knows what one means by God.

The effort to make some further advance towards unravelling the great variety of interwoven motives which appear in the history of monotheism, and which have been suggested by the foregoing considerations, will be aided by attempting, at this

point, once more to review the issues with regard to the nature of God, but now from a somewhat different point of view. The problems, both about 'God' and about 'the gods,' have everywhere been inherited by the philosophers from religions whose origins antedated their philosophy. In a few cases, notably in the case of Greece on the one hand and India on the other, the origin of the philosophical traditions regarding the divine being can be traced back to ancient religious tendencies, while the transition from religion to philosophy is fairly well known, and passes through definite stages. In one other instance, the transition from a tribal religion to a form of monotheism which was not due to philosophers but which has deeply influenced the subsequent life of philosophy is also decidedly well known, and can be traced in its essential details. This is the case of the religion of Israel. Now in the three cases in question—that of India, that of Greece, that of Israel—the rise of a doctrine which is certainly in each case a monotheism can be fairly well understood. The three forms of monotheism which resulted led in the sequel to contrasts of doctrine which, in the case of the history of philosophical thought, have been momentous. Ignoring, then, the complications of early religious history, ignoring also the effort further to define and to classify those doctrines which have been summarized in the various definitions of monotheism and its opponents which we have just reviewed, it seems well to reconsider the important varieties of philosophical belief regarding the divine being in the light of the great historical contrast of the three forms of monotheism which India, Greece, and Israel put before us. We shall discard the name 'pantheism,' and make no attempt to define the contrast between divine immanence and divine transcendence, or to speak of the problem in what sense God is personal and in what sense impersonal. Nor can we here exhaust the varieties of philosophical opinion. But the threefold contrast just given will help us to make clearer the philosophical issues of monotheism by naming certain varieties of philosophical thought which have both a definite historical origin and a great influence upon the character of opinion about the divine being. Simplifying the whole matter in this somewhat artificial but still well-founded way, we may say that, from the historical point of view, three different ways of viewing the divine being have been of great importance both for religious life and for philosophical doctrine. No one of these three ways has been exclusively confined to the nation of which the form of opinion in question is most characteristic, and in the history of philosophical thought the three motives are interwoven. But a comparatively clear distinction can be made if we emphasize the three contrasting doctrines, and then point out that these doctrines, while not exclusively due each to one of the three nations or to philosophies which have grown out of the religious traditions of the nation in question, are still, on the whole, fairly to be associated, one with the tradition of Israel, the second with the influence of Greece, and the third with the influence either of India or of nations and civilizations which, in this respect, are closely analogous in spirit to the civilization of India.

(1) The monotheism due to the historical influence of the religion of Israel defines God as 'the righteous Ruler of the world,' as 'the Doer of justice,' or as the one 'whose law is holy,' or 'who secures the triumph of the right.' The best phrase to characterize this form of doctrine, to leave room for the wide variety of special forms which it has assumed, to indicate its historical origin, and also to imply that it has undergone in the course of history a long process of development, is this: 'the

ethical monotheism of the Prophets of Israel.' We include under this phrase that form, or type, or aspect of monotheism, which characterizes philosophies that have been most strongly influenced, directly or indirectly, by the religion of Israel.

(2) The monotheism which has its historical origin very largely in the Greek philosophers defines God as the source, or the explanation, or the correlate, or the order, or the reasonableness of the world. It seems fair to call this form 'Hellenic monotheism.' In the history of philosophy, and especially of that philosophy which has grown up under the influence of Christianity, this idea of God has, of course, become interwoven—sometimes consciously, sometimes unconsciously—with the ethical monotheism of Israel. But, when a philosophy of Christian origin is in question, while in some respects this philosophy, if positively monotheistic, is almost sure to be strongly influenced by ethical monotheism, the most important and essential features of the philosophy in question will be due to the way in which it deals with the relation between the order of the world and the nature of the 'One God.' Aristotle's statement of his own problem regarding whether God is identical with the 'order' or is related to the world as the 'general' is related to the army is a good example of the form which the problem of monotheism takes from this point of view.

(3) The third form of monotheism is very widespread, and has actually had many different historical origins. In the history both of religion and of philosophy this form of monotheism, somewhat like the Ancient Mariner, 'passes, like night, from land to land' and 'has strange power of speech.' Often unorthodox at the time or in the place where it is influential, it has indirectly played a large part in the creeds of various times and places. Usually fond of esoteric statements of doctrine, and often condemned by common sense as fantastic and intolerable, it has had many times of great popular influence. The official Christian Church has had great difficulty in defining the relation of orthodox doctrine to this form of opinion. In the history of philosophy the more technical statements of it have formed part of extremely important systems.

This form of monotheism is especially well marked in the early history of Hindu speculation. It is often called 'Hindu pantheism'; and it is indeed fair to say that it is in many respects most purely represented by some systems of belief and doctrine which have grown up on Indian soil. On the other hand, it has a less exclusive relation to Indian philosophy than the Hellenic form of monotheism, in its later history, has to Greek philosophy, so that the connexion here insisted upon between this kind of monotheism and the early history of Hindu philosophy must be interpreted somewhat liberally. In fact, at the close of the history of Greek philosophy this third form of monotheism appeared as a part of the Neo-Platonic philosophy. Yet in this case an Oriental origin or direct influence is extremely improbable. Examples of the tendency of this form of monotheism to take on new forms, and to be influenced by other motives than those derived from the religion or philosophy of India, are to be found in the recent revival of such types of doctrine in various forms of 'intuitionism' and 'anti-intellectualism' in European thought.

The essence of this third type of monotheism is that it tends to insist not only upon the 'sole reality of God,' but upon the 'unreality of the world.' The name 'acosmism' therefore is more suggestive for it than the name 'pantheism.' It might be summed up in the proposition 'God is real,' but all else besides God that appears to be real

is but an 'appearance' or, if better estimated, is a 'dream.' If we attempt to make more precise the vague word 'pantheism' merely by saying, 'God and the world are, according to pantheism, but one,' the natural question arises, 'If they are but one, then which one?' But what we may now call, in a general way and upon the general historical basis just indicated, 'Indic monotheism,' whether it appears in Hindu philosophy, in Spinoza, or in Meister Eckhart, tends to assert, 'The One is God and God only, and is so precisely because the world is but appearance.' This definition of the third form of monotheism relieves us of some of the ambiguities of the term 'pantheism.'

The threefold distinction now made enables us similarly to review some of the great features of the history of philosophical monotheism in a way which cannot here be stated at length, but which, even when summarily indicated, tends to elucidate many points that have usually been unduly left obscure.

The ethical monotheism of the Prophets of Israel was not the product of any philosophical thinking. The intense earnestness of the nation into whose religious experience it entered kept it alive in the world. The beginnings of Christianity soon required philosophical interpretation, and in any such interpretation the doctrine of the righteous God must inevitably play a leading part. In the course of the development of the Church this doctrine sought aid from Greek philosophy. Consequently, the whole history of Christian monotheism depends upon an explicit effort to make a synthesis of the ethical monotheism of Israel and the Hellenic form of monotheism. This synthesis was as attractive as, in the course of its development, it has proved problematic and difficult. The reason for the problem of such a synthesis, as the philosophers have had to face that problem, lies mainly in the following fact. Whether taken in its original form or modified by philosophical reflection, ethical monotheism, the doctrine that 'God is righteous,' very sharply contrasts God, 'the righteous Ruler,' or, in Christian forms, 'God the Redeemer of the world,' with the world to which God stands in such ethical relations. On the other hand, for the Hellenic form of monotheism, the problem which Aristotle emphasized about the 'order' and the 'general' indeed exists. But in its essentials Hellenic monotheism is, on the whole, neutral as to the kind of unity which binds God and the world together. Our later philosophies, in so far as they are founded upon Hellenic monotheism, must therefore attempt explicitly to solve the problem which Aristotle stated. And, on the whole, such philosophies tend towards answering the question as Aristotle did: God is both 'order' and the 'general' of the army which constitutes the world. Hellenic monotheism, moreover, is influenced by strongly intellectual tendencies. On the other hand, the monotheism of Israel was, even in its ante-philosophical form, a kind of voluntarism. God's law, viewed as one term of the antithesis, the world which He rules, or which He saves, viewed as the other, are much more sharply contrasted than Aristotle's 'order' and 'general' tend to be. When, in the development of the philosophies which grew out of the Greek tradition, the Hellenic concept of the Logos (*q.v.*) assumed its most characteristic forms, its intellectual interests were, on the whole, in favour of defining the unity of the divine being and the world as the most essential feature of monotheism. But, at each stage of this development, this intellectual or rational unity of the Logos and the world gradually came into sharper and sharper conflict with that ethical interest which naturally dwelt upon the contrast between the righteous

Ruler and the sinful world, and between divine grace and fallen man.

Therefore, behind many of the conflicts between so-called pantheism in Christian tradition and the doctrines of 'divine transcendence' and 'divine personality,' there has lain the conflict between intellectualism and voluntarism, between an interpretation of the world in terms of order and an interpretation of the world in terms of the conflict between good and evil, righteousness and unrighteousness.

Meanwhile, in terms of this antithesis of our first and second types of philosophical monotheism, we can state only half of the problem. Had the monotheism of Israel and the Hellenic doctrine of God as the principle of order been the only powers concerned in these conflicts, the history both of philosophy and of religion would have been, for the Christian world, far simpler than it is. The motives which determine the third idea of God have tended both to enrich and to complicate the situation.

It is true that a direct connexion between ancient Hinduism and early Christian doctrine cannot be traced. But what we have called, for very general reasons, the Indic type of idea of God became, in the course of time, a part of Christian civilization for very various reasons. As we have seen, the doctrine that God alone is real while the world is illusory depends upon motives which are not confined to India. In the form of what has technically been called 'mysticism,' this view of the divine nature in due time became a factor both in Christian experience and in philosophical interpretation. The Neo-Platonic school furnished some of the principal technical formulations of such a view of the divine nature. The religious experience of the Græco-Roman world, in the times immediately before and immediately after the Christian era, also in various ways emphasized the motives upon which this third type of Christian monotheism depends. The Church thus found room within the limits of orthodoxy for the recognition, with certain restrictions, of the tendency to view the world as mere appearance, ordinary life as a bad dream, and salvation as attainable only through a direct acquaintance with the divine being itself.

The very complications which for philosophy have grown out of the efforts to synthesize Hellenic monotheism and the religion of the Prophets of Israel have repeatedly stimulated the Christian mystics to insist that what the intellect cannot attain, namely, an understanding of the nature of God and His relation to the world, the mystic experience can furnish to those who have a right to receive its revelations. Philosophy—intellectual philosophy—fails (so such mystics assert) to solve the problems raised by the contrasts between good and evil, between God and the world, as these contrasts are recognized either by those who study the order of the universe or by those who thirst after righteousness. What way remains, then, for man, beset by his moral problems, on the one hand, and his intellectual difficulties, on the other, to come into real touch with the divine? The mystics, i.e. those who have insisted upon the third idea of God, and who have tested this idea in their own experience, have always held that the results of the intellect are negative, and lead to no definite idea of God which can be defended against the sceptics, while, as the mystics always insist, to follow the law of righteousness, whether with or without the aid of divine grace, does not lead, at least in the present life, to the highest type of the knowledge of God. We approach the highest type of knowledge, so far as the present life permits, if we recognize, in the form of some sort of 'negative' theology, the barrenness of intellectualism, and if,

meanwhile, we recognize that the contemplative life is higher than the practical life, and that an immediate vision of God leads to an insight which no practical activity, however righteous, attains. To teach such doctrines as matters of personal experience is characteristic of the mystics. To make more articulate the idea of God thus defined has formed an important part of the office of theology.

Without this third type of monotheism, and without this negative criticism of the work of the intellect and thus direct appeal to immediate experience, Christian doctrine, in fact, would not have reached some of its most characteristic forms and expressions, and the philosophy of Christendom would have failed to put on record some of its most fascinating speculations.

It is obvious that, on the face of the matter, the immediate intuitions upon which mystical monotheism lays stress are opposed to the sort of insight which the intellect obtains. Even here, however, the opposing tendencies in question are not always in any very direct contrary opposition in the thought or expression of an individual thinker or philosopher. Thus, in an individual case, an exposition of mysticism may devote a large part of its philosophical work to a return to the Hellenic type of theism. That this was possible the Neo-Platonic school had already shown (see art. NEO-PLATONISM). Wherever Christian monotheism is strongly under the Neo-Platonic influence, it tends to become a synthesis of our second and third types of monotheism. In such cases the monotheism is Hellenic in its fondness for order, for categories, and for an intellectual system of the universe, and at the same time devoted to immediate intuitions, to a recognition that the finite world is an appearance, and to a definition of God in terms of an ineffable experience, rather than in terms of a rational system of ideas. Such a synthesis may, in an individual system, ignore the conflicts here in question. Nevertheless, on the whole, the opposition is bound to become, for great numbers of thinkers and, on occasion, for the authorities of the Church, a conscious opposition. And the opposition between the ethical and the mystic types of monotheism is in general still sharper, and is more fully conscious. Despite all these oppositions, however, it remains the case that one of the principal problems of Christian theology has been the discovery of some way to bring the third of the ideas of God, the third of the tendencies to define God as One, into some tolerable and true synthesis either with the first or with the second of the three types of monotheism, or with both.

In the technical discussions of the idea of God which have made up the introductory portions of many systems of so-called 'nature theology,' it has been very general for the philosophers of Christendom to emphasize the Hellenic type of theism. The so-called philosophical 'proofs of the divine existence' make explicit some aspect of the Hellenic interest in the order and reason of the world. The 'design argument,' first stated in an elementary form by Socrates, and persistently present in popular theology of the monotheistic type ever since, is an interpretation of the world in terms of various special analogies between the particular sorts of adaptation which the physical world shows us and the plans of which a designing intelligence, in the case of art, makes use. The so-called 'cosmological argument' reasons more in general terms from the very existence of this 'contingent' world to the Logos whose rational nature explains the world. The highly technical 'ontological argument' insists upon motives which arise in the course of the effort to define the very nature of an

orderly system. In its briefest statement the ontological argument is epitomized by Augustine when he defines God as 'Veritas' and declares that Veritas must be real, since, if there were no Veritas, the proposition that there is no Veritas would itself be true. The more highly developed forms of the ontological argument reason in similar fashion from our own ideas of the nature of the Logos, or of the rationally necessary order system of the universe—in other words, from the realm of Platonic ideas, in so far as it is manifested through and to our intellect, to the reality of such a system beyond our intellect.

It has been insisted, and not without very genuine basis, both in religion and in the controversies of the philosophers, that all such efforts, through the intellect, to grasp the divine nature lead to results remote from the vital experience upon which religious monotheism and, in particular, Christian monotheism must rest, if such monotheism is permanently to retain the confidence of a man who is at once critical and religious. Into the merits of the issues thus indicated, this is no place to enter. In any case, however, both the warfare of the philosophical schools and the contrast between intellectual theology and the religious life have often led to philosophical efforts to escape from the very problems now emphasized to some more immediate intuition of the divine, or else to assert that there is no philosophical solution to the religious problem of theism. Thus intellectualism in theology, in the forms in which it has historically appeared, has repeatedly tended to bring about its own elimination. The more highly rational it has become, and the more its apparent barrenness, or its inability to combine the various motives which enter into the three different monotheistic tendencies has become manifest, the more the result of a careful analysis of the intellectual motives has led either to the revival of mysticism or to a sceptical indifference to philosophical theism. To say this is merely to report historical facts.

Some negative results of the more purely Hellenic type of monotheism became especially manifest through the results of the Kantian criticism of reason and of its work. It is extremely interesting, however, to see what, in Kant's case, was the result of this criticism of the traditional arguments for the existence of God. By temperament Kant was indisposed to take interest in experiences of mystic type. For him, therefore, the failure of the intellect meant a return to the motives which, in no philosophical formulation, but in the form of an intensely earnest practical faith, had long ago given rise to the religion of Israel. Therefore the God of Kant is, once more, simply the righteous Ruler. Or, as Fichte in a famous early essay defined the idea, 'God is the moral order of the world.' This Kantian-Fichtean order is, however, not the Hellenic order, either of the realm of Platonic ideas or of the natural world. It is the order of 'the kingdom of ends,' of a universe of free moral agents, whose existence stands in endless contrast to an ideal realm of holiness or moral perfection, after which they must endlessly strive, but of whose real presence they can never become aware through a mystical vision or by a sure logical demonstration. The righteous man, according to Kant, says: 'I will that God exists.' Kant defines God in terms of this will. Monotheism, according to this view, cannot be proved, but rationally must be acknowledged as true.

Yet, in his *Critique of Judgment*, Kant recognized that the requirement to bring into synthesis the intellect and the will, and to interpret our aesthetic experience, i.e. our acquaintance with the kind of perfection which beauty reveals—this ideal, a

synthesis of the ethical, the intuitional, and the rational—remains with us. And, despite all failures, this ideal is one from which philosophy cannot escape.

The revived interest in intuition and in religious experience which has characterized the transition from the 19th to the 20th cent. has once more made the mystical motives familiar to our present interest. The permanent significance of the ethical motives also renders them certain to become prominent in the attention of serious-minded men, even though the Kantian formulation of the ethical ideals seems for the moment, in our mobile contemporary philosophical and religious thought, too abstract and rigid. And so we are not likely, in future, to accept any merely one-sided Hellenism.

While no attention can here be given to the solutions of the problem of philosophical monotheism which have been proposed during the last century, the problem of monotheism still remains central for recent philosophy. It may be said that dogmatic formulations are at the present time often treated with the same indifference which is also characteristically shown towards the faith of the fathers, viewed simply as a heritage. Nevertheless, the problems of philosophical monotheism remain as necessarily impressive as they have been ever since the early stages of Christian theology. They are as certain to survive as is philosophy itself. What the whole history of the monotheistic problem in philosophy shows becomes to-day, in view of our explicit knowledge of the philosophy of India, and in view of our wide comparative study of religions, more explicit than ever. Philosophy is a necessary effort of the civilized consciousness, at least on its higher level. Monotheism is a central problem of philosophy. This problem is not to be sufficiently dealt with by merely drawing artificial or technical distinctions between Platonic or Neo-Platonic theories; nor can the problem be solved by calling it the problem of the immanence of God as against His transcendence. The question 'Is God personal?' becomes and will become more explicit in its modern formulation the more we become aware of what constitutes a person. Meanwhile, as was remarked above, the problem of monotheism has other aspects besides the problem of personality.

The essentials of the great issue remain for us, as for our fathers, capable of formulation in the terms which have here been emphasized. To repeat, the philosophical problem of monotheism is (1) In what sense is the world real? (2) In what sense is the world a rational order? (3) In what sense is the world ethical? The effort to answer these questions cannot be made by exclusive emphasis on one of them. For, as we have seen, the problem of monotheism requires a synthesis of all the three ideas of God, and an answer that shall be just to all the three problems. Whether monotheism is true or not can be discovered, in a philosophical sense, only through a clear recognition of the contrast of the three ideas of God, and the synthesis which shall bring them into some sort of harmony. The further discussion of the nature of this harmony does not come within the scope of this article (see art. GOD [Biblical and Christian]).

JOSIAH ROYCE.

MONOTHELETISM.—1. The problem.—The Monenergistic or Monothelete controversy seems

at first glance to be a mere sequel to the Monophysite conflict, a knowledge of which is assumed in the present article. On a closer examination, however, we see that the later controversy has a character of its own, since it shows how the adoption of the orthodox Diphysite point of view was not regarded as leading necessarily and directly to Dithete conclusions. In the art. MONOPHYSTISM (p. 811 ff.) it was indicated how the new orthodoxy came to terms with the problem of the two natures in the one person of Jesus Christ—the problem raised by the Symbol of Chalcedon. The person of the God-man was conceived as arising from the person (*ὑπόστασις*) of the Logos, which assimilated the human attributes, and upon which, as the core of personality, human nature was, so to speak, engrafted by the process of *ἐνπόστασις*. On this hypothesis it might seem entirely justifiable to ascribe everything that Christ said or did to the one volitional activity (*ἐνέργεια*) of the God-man, and actually, indeed, to regard all as emanating from His undivided will (*θέλημα*). Such a view, moreover, could be supported by the evidence of earlier Fathers. Cyril, with reference to Lk 8⁵⁴, had said of Christ: *μὴν τε καὶ συγγενῇ δ' ἀμφοῖν* [i.e. word and hand] *ἐπιδεικνύς τὴν ἐνέργειαν*; and it was possible, above all, to adduce the witness of a passage in the fourth Epistle of the pseudo-Dionysius—a passage containing the phrase *μία θεανδρική ἐνέργεια*, which was destined to play so important a part in the coming days. The Monenergists were possessed with the idea that the redemptive activity of the God-man emanated wholly and solely from His divine nature, that nature providing the stimulus which was mediated by His rational soul and brought to realization in His body. Nor had even the natural operations of Christ as a rational being their source in His human nature purely by itself, as that nature subsisted, not by itself alone, but in the divine nature conceived as inherently personal. Hence that which in Christ corresponds to human nature was itself the work of God: it was one energy, whose source is God, and whose instrument was His humanity; it was one will, and that will was divine. To Sergius of Constantinople (cf. § 2) it seemed perfectly obvious that the rationally endowed body of Christ effected its natural movements only in accordance with the measure assigned by His divine will, and that, just as our bodies are governed by our rational souls, so the whole complex of Christ's human nature was constantly directed by His deity.

The objections urged by the opposite party against this theory of the oneness of Christ's *ἐνέργεια* were based upon the feeling that it surrendered the distinctively human element in Christ's activity, since it implied that His human nature was a mere passive instrument, and must therefore be conceived as inanimate or, at least, as non-rational. Such a view, however, was in reality a reversion to Apollinarianism (*q.v.*); and, even if the Monenergists did not go so far, yet their idea of the one composite energy really presupposed that of the one composite nature as held by the Severians. In point of fact, the theses of the Monenergists approximate very closely to those of the Severians—the more moderate party of the Monophysites. As the Monenergists themselves came to recognize this, they surrendered the phrase *μία ἐνέργεια* and rallied around the *ἐν θέλημα*. This position they regarded as unassailable, since two wills (as distinguished from mere impulses or natural tendencies to action) seemed inevitably to involve two subjects endowed with volition (*δύο ὑποστάσεις*). They rightly recognized that, if there was in the God-man a will which diverged from His divine will, that divergent will could spring

from nothing else than an ungodly tendency in the nature which He had assumed. Such a view, however, would have been in conflict with the doctrine of the sinlessness of Christ's human nature, in which all parties were at one, and would therefore have been accounted blasphemy. Gregory of Nyssa, writing long before, had said: *τὸ ἐκείνου θέλειν οὐδὲν ὑπεραντίον τῷ θεῷ, θεῶθεν ὅλον*. The adverse party was wont to appeal to passages like Mt 28³⁹, where the human will and the divine will seem to stand in opposition; but the Monothelites sought to show from the Fathers that, on a strict interpretation of this text, Christ had a human will *κατ' ὁκείωσιν* only. They did not mean to deny the presence of a human activity in the one will of Christ, but they held that this activity was entirely due to His divine will. In relation to His divine *ἐνέργεια*, they maintained, the human *ἐνέργεια* becomes a *πάθος*, and, when Gregory said of Christ that His soul wills, he meant that the volition of Christ's soul was due to the will of the Deity who was personally united with His soul, and that, accordingly, it was divine volition in a human form.

The Monenergists and Monothelites sought to support their contention also on the ground that the phrase *δύο ἐνέργειαι* had never yet been heard in the doctrinal controversy; and, while this claim was not absolutely valid, yet Sergius could say with some show of reason that none of the *θεόπνευστοι τῆς ἐκκλησίας μυσταγωγοί*, i.e. none of the recognized Fathers of the Church, had made use of the phrase. As regards the formula of the *δύο θελήματα*, again, the Monothelite case was a still stronger one. In earlier writers the phrase *δύας θελημάτων* is used only as expressing a final consequence foisted upon those who held the doctrine of the two natures. The use of the phrase in a positive sense can be traced only in a single work, written—if genuine—before the Monothelite controversy, viz. the treatise *περὶ τῆς ἁγίας τριᾶδος καὶ περὶ τῆς θέας οἰκονομίας* ascribed to Eulogius of Alexandria († 607). But, while the Dithelites were thus unable to call tradition to their aid, they operated all the more zealously with the inherent logic of their case. In point of fact, no logical objection could be urged from the standpoint of the new orthodoxy, as, e.g., from that of Leontius of Byzantium, against the procedure of ascribing *δύο φυσικαὶ ἐνέργειαι* to the *δύο φύσεις*. Indeed, it was, more than all else, this logical inference, i.e. the consistent development of the position affirmed in the formulæ of Chalcedon, that helped the doctrine of the two wills to gain the day. It is true that the contradiction involved in the doctrine of the two natures was rendered still more palpable in that of the two wills. But those who had come to terms with the former doctrine had no difficulty in accepting the latter, and it is the aim of the following historical sketch to show how this point was reached.

2. The beginnings of the controversy.—The secession of the Monophysites did serious damage to Byzantium and its Church. It smoothed the way for the advance of the Arabs and of Islam. Far-seeing and energetic politicians sought to arrest the mischief by working for the ecclesiastical reconciliation of the eastern and southern provinces of the empire. The most outstanding figures in this movement were the emperor Heraclius (610–641) and the patriarch Sergius (610–638). Sergius, a Syrian born of Jacobite parents, was already giving his mind to the thought of union in the early years of his tenure of office. He caught at the watchwords *μία ἐνέργεια* and *μία θέλησις ἁγίου ἐν θέλημα*, which had apparently been introduced into the controversy by the Alexandrian Monophysites, and he succeeded at the outset, on the

basis of the doctrine implied by these expressions, in winning the emperor's approval of his designs. Soon afterwards (622) Heraclius issued an edict proscribing the doctrine of the *δύο ἐνέργειαι*. But, although Sergius brought all the weapons of patristic learning to bear upon the Armenian and Syrian Monophysites, the negotiations made little headway. It was not until 633 that indications of real progress began to show themselves. Cyrus, patriarch of Alexandria, whom Heraclius had translated to that city from Phasis in Lazica, succeeded in bringing about a union with the Theodosians, i.e. the Monophysites (see art. MONOPHYSITISM, § 3). The doctrinal programme drawn up by Cyrus, while setting the doctrine of the two natures in the forefront, guarded it carefully by special clauses; it distinctly recognized the Cyrillian terminology of the one incarnate nature, and it adopted the Areopagite formula of the one theanthropic energy. The Monophysites had some grounds for thinking that, as one of our sources puts it, it was not they who made alliance with Chalcedon, but rather Chalcedon with them. About this time, too, the metropolitan church succeeded in effecting an understanding with the Armenian, though this did not last long. The greatest triumph, however, was the winning of Athanasius, the Jacobite patriarch of Antioch; for now the occupants of the three great Oriental sees were all on the same side. But at this juncture the union that had been brought about with such difficulty was gravely imperilled by the action of a Palestinian monk.

This was Sophronius, who had at an early date maintained relations with the Alexandrian patriarchs Eulogius and John the Merciful. He now made his way from Palestine to Egypt in order to lodge a protest with Cyrus against the articles of union, in which he thought he discerned Apollinarianism. As Cyrus hesitated to withdraw the articles at the request of Sophronius, the latter proceeded to Constantinople and tried to induce Sergius to delete the expression *μία ἐνέργεια* from the document. The patriarch was not prepared to take that step, but for the sake of peace he agreed to send his Alexandrian colleague a letter recommending him to have done with the dispute as to one *ἐνέργεια* or two, but forbidding him to sanction the thesis of the two wills, which he stigmatized as blasphemous (*δυσσεβές*). With this Sophronius was satisfied. Sergius, moreover, secured another triumph in gaining the support of Pope Honorius for his pacific policy (cf. § 3). Shortly afterwards (634) Sophronius was appointed to the see of Jerusalem. He broke away at once from the accepted understanding by referring in his inaugural encyclical to the two natures, though he certainly avoided any overt acceptance of the doctrine of the two wills. His action was deeply resented by Sergius, and Honorius tried, though without success, to persuade him to drop the objectionable expression. Eventually the emperor issued a decree, framed by Sergius—the so-called Ecthesis of 638—forbidding all mention either of one energy or of two energies: of one, because the mention of it might lead to a denial of the two natures, and of two, because two energies seemed logically to involve two mutually antagonistic wills.

3. The case of Honorius.—Honorius of Rome, by reason of his attitude in the Monothelite controversy, was, as will be explained below (§ 5), put under the ban by an Ecumenical Council. This proceeding has had such important consequences in the war of the confessions that the historian cannot afford to ignore it. Here we must first of all ask what Honorius had really said. The missive in which he explained his theological

position to his colleague in Constantinople is extant only in a Greek translation, but the agreement of this translation with the Latin autograph was definitely confirmed at the Council. In this letter Honorius had set in the foreground his desire that the controversy as to one or two energies should be allowed to rest or relegated to the grammarians. The introduction of the new phrases into the doctrinal terminology might bring those who used them under suspicion either of Eutychianism or of Nestorianism. He nevertheless adhered impartially to the view that, whatever decision might be made between the hypothesis of the one and that of the two energies, it was at all events necessary to accept the doctrine of a single will (*ὅθεν ἐν θέλημα ὁμολογοῦμεν τοῦ κυρίου Ἰησοῦ Χριστοῦ*); for, as the Son of God had assumed a pure and supernaturally begotten human nature, the idea of a second will, disparate or antagonistic (*διάφορον ἢ ἐναντίον θέλημα*), was simply out of the question. Passages like Mt 26³⁹ or Jn 5³⁰, in which Christ seems to mark a contrast between His own will and the will of God, did not in any real sense indicate a different will, but simply referred to the economy of His assumed humanity (*οὐκ ἐστὶ ταῦτα διαφόρου θελήματος, ἀλλὰ τῆς οἰκονομίας τῆς ἀνθρωπότητος. τῆς προσληφθείσης*). Christ, as our example, adopted this manner of speaking for our sake, i.e. in order that we should follow His footsteps, not seeking our own will but the will of God.

The letter of Honorius reveals throughout an intelligent and accurate grasp of the situation. To reproach its writer with having adopted the doctrine of the one will is simply an anachronism, for that doctrine had not yet become ecclesiastically suspect. Even Sophronius himself, in fact, as has already been said, had not put the doctrine of the two wills upon his programme, and the question as to the Monothelism of Honorius is of a piece with that regarding the Monophysitism of Cyril of Alexandria. We might venture to say, indeed, that, if Honorius had, a generation later, occupied the Roman chair in place of Agatho, he would have given the same judgment as the latter did, and thus, to speak paradoxically, would have pronounced his own condemnation. Agatho and the Council of 681 stood face to face with a situation of a totally different kind. As Monothelism had then become a thing of evil repute, they were simply bound to condemn it, and, in doing so, they could not avoid reprobating the missive of Honorius as well. Above all, however, we must not forget that Agatho not only refrained from protesting against the anathematization of his predecessor, but by the voice of his legate actually gave it his sanction. In the following year Pope Leo II. expressly ratified the condemnation in a communication to the emperor, in which he spoke of Honorius as one 'qui hanc apostolicam sedem non apostolicæ traditionis doctrina illustravit, sed profana proditiōe immaculatam fidem subvertere conatus est.' This judgment is, no doubt, unduly severe, and, measured by the standard of historical truth, positively false. Still, it certainly shows the remarkable freedom from prejudice with which the authority of a pope in matters of doctrine could then be viewed even in Rome itself. It is quite incompetent, on the other hand, to bring the case of Honorius into the question of papal infallibility. If we keep in mind the provisions of the Vatican dogma regarding the import and scope of the pope's infallibility, we shall see at once that they do not apply at all to the missive of Honorius. If the latter is declared to be without error, the same attribute might with equal justification be applied to any other utterance of a pope.

4. Byzantium and Rome in conflict.—After the

death of the emperor Heraclius, and the brief reigns of his two sons, his grandson, Constans II. (641–668, son of Constantine III.), was raised to the throne in consequence of a court revolt. Constans, too, adhered to the *Ecthesis*, which, however, had meanwhile encountered a keen resistance, especially among the clergy of the West. In Rome Pope John IV. officially condemned Monothelism; the N. African bishops raised a vigorous agitation against it; and soon the whole western province was ringing with passionate debate. Constantinople, on the other hand, remained loyal to the *Ecthesis*. The patriarch Pyrrhus, who had succeeded Sergius, was deposed by Constans on political grounds, being superseded by Paul, a man of like doctrinal views with himself. Pyrrhus went to Africa, and there intervened vigorously in the conflict. With Maximus, an abbot of Constantinople, who had likewise removed to Africa, he conducted a discussion the records of which are among the most notable documents of the whole controversy. Here Maximus proved the victor.

This Maximus was the most eminent and effective champion of Dithelism, and his constancy to his creed won him the title of 'Confessor.' He was born c. 580 at Constantinople. His career was that of a high State functionary, and he acted as imperial secretary in the reign of Heraclius. From 630 he lived in the monastery at Chrysopolis (now Scutari), where he soon attained to the dignity of an abbot. He worked energetically on behalf of Dithelism both in Africa and at Rome, and it was at his instigation that the Lateran Council of 649 (see below) was summoned. As the part which he thus played ran counter to the policy of the emperor, he was at length put upon his trial. In 653 he was arrested and taken to Constantinople, and two years later he was banished. In 662 the unfortunate man was once more subjected to a legal process, as a result of which his tongue was cut out and his right hand struck off, and he died within the year in Lazica on the east coast of the Euxine. The best known of his extant works is his *Scholion* to the pseudo-Dionysian writings, and it was, in fact, the comments of Maximus that secured the Church's recognition of these texts.

The vehement opposition of the Dithelites, however, did not wholly fail to influence the ecclesiastical policy of the emperor. Already in 648 Constans, acting on the advice of the patriarch Paul, had issued a decree, the so-called *Typus*, declaring that the dispute regarding the doctrine of the wills must come to an end at once. The *Typus*, unlike the *Ecthesis*, avoids all argumentation on matters of detail; disobedience to its provisions was to be visited with severe ecclesiastical and civil penalties. But the Dithelites would not be silenced. They had now their centre in Rome, and a Council conducted in 649 by Pope Martin in the Constantinian basilica of the Lateran Palace, and attended also by the Greek monks who had fled to Rome, affirmed, in explicit conformity with the declaration of Chalcedon, its adherence to the doctrine of two wills and two energies corresponding to the two natures of Christ. The action of Martin raised an agitation in both East and West, and the emperor, bitterly resenting this, as well as the pope's friendly relations with the exarch Olympius, then lying under suspicion of high treason, had him sent to Constantinople (653), and, after a criminal trial, banished to the Chersonese, where in 655 death released him from his sufferings.

5. The 6th Ecumenical Council and the end of the controversy.—For a time it appeared as if the new policy of peace would be attended with success. Pope Vitalian entered into friendly alliance with the emperor; ecclesiastical communion between East and West was tacitly restored; and, when Constans visited Rome in 663, he was received with due imperial honours. At the murder of the emperor, however, the antagonism broke out more fiercely than ever, and the dissension led to a fresh rupture of ecclesiastical relations. Such a state of matters was felt by the politicians, as formerly in Justinian's time, to be intolerable; and to deal

with it the emperor Constantine IV. Pogonatus (668–685) resorted to the plan of holding an imperial Synod. In November 680, accordingly, the Eastern prelates, together with the legates of Pope Agatho, assembled in the Hall (*τρούλλος*, hence 'Trullan' Council) of the imperial palace at Constantinople. This Council, which sat, with considerable interruptions, until September 681, is recognized officially by both Churches as the 6th Ecumenical Council. The members, with abundant excerpts from the Fathers in their hands, carried the debate from one point to another, until at last the Roman representatives won acceptance for the doctrine of the two wills, and procured the condemnation of its opponents, living and dead alike, including, as we saw above (§ 3), Pope Honorius. The Roman point of view is set forth in the comprehensive statement laid by Agatho before the emperor—a document that came to be regarded as a counterpart to the *Tomus* of Leo I. (cf. art. MONOPHYTISM, § 1). In the Symbol of the Council the terms in which the Chalcedonian formula defines the relation of the two natures are applied to the two inherent wills (*ὁμο φύσικαι θελήσεις ἡτοι θελήματα*). Thus the two wills corresponding respectively to the two natures are not opposed to each other (*οὐχ ὑπεραντίτα*); on the contrary, the human will is obedient to the divine and omnipotent will to which it is subject (*ἐπόμενον τὸ ἀνθρώπινον αὐτοῦ [i.e. τοῦ λόγου] θέλημα καὶ μὴ ἀντιπύπτον ἢ ἀντιπαλαῖον, μάλλον μὲν οὖν καὶ ὑποτασσόμενον τῷ θεῷ αὐτοῦ καὶ παρσθενεὶ θελήματι*), for it was necessary that, while the will of the flesh must indeed act, it should be subordinate to the divine will. Just as the flesh of the God-Logos (*τοῦ θεοῦ λόγου*) is called flesh, and is flesh, so the natural will of this flesh is called, and rightly called, the will of the God-Logos. And, as His holy and stainless animate flesh was not taken away in being made divine (*θεωθεῖσα οὐκ ἀνθρώπη*), but remained within its own limitations and relations (*ἐν τῷ ὁμοίῳ αὐτῆς ὄρω καὶ λόγῳ διέμεινεν*), so the human will likewise was not abolished in the act of deification, but was still preserved.

Agatho did not live to see the triumph of his cause, and it was left to his successor, Leo II., to secure the acceptance of the Council's decrees in the West. The most zealous antagonist of Dithelism in the East, Macarius, patriarch of Antioch, was prevented from doing further mischief by confinement in a monastery. The second Trullan Council, the so-called *Concilium Quinisextum* (692), homologated the condemnation of Monothelism. This does not mean, of course, that the conflict was wholly at an end, and, in fact, it was intermittently fanned to fresh outbursts by the wranglings of the Byzantine court. Eventually the emperor Philippicus Bardanes (711–713) undertook to deal with it, while his successor, Anastasius II. (713–715), restored the authority of the Council of 680–681. But Monothelism was still faithfully adhered to by the Maronites of Mt. Lebanon.

LITERATURE.—I. SOURCES.—(1) Letters and other written communications of those who took part in the controversy, as found in the documents of the Lateran Synod and the 6th Ecumenical Council; (2) contemporary works, esp. the writings of Maximus Confessor (*Opuscula theologica et polemica ad Marimum, Disputatio cum Pyrrho*) and statements in Anastasius Sinaita, *Περὶ τοῦ κατ' εἰκόνα καὶ καθ' ὁμοίωσιν*, bk. iv. (A. Mai, *Script. Vet. Nova Coll.*, Rome, 1821, vi. 193 ff.); (3) later chronicles and historical works, as, e.g., the *Ἱστορία συντομος* of the patriarch Nicephorus, and the *Χρονολογία* of Theophanes.

II. MODERN WORKS.—The reader should consult the works cited at the art. MONOPHYTISM; those of Gibbon, Walch, Dörner, Hefele, Harnack, and Krumbacher are well worth attention also as regards Monothelism. The disputes in Armenia touched upon in § 2 of the present article are discussed with special care in G. Owsseian, *Die Entstehungsgeschichte des Monothelismus nach ihren Quellen geprüft*, Leipzig, 1897. The best recent discussion of the case of Honorius—though from

the standpoint of papal infallibility—is given in J. Chapman, *The Condemnation of Pope Honorius*, London, 1907 (= *Dublin Review*, cxxxix [1906] 129 ff., cxi. [1907] 42 ff.). For the relation of the present art. to the writer's art. in *PRES.*, cf. the closing note in the literature of art. MONOPHYTISM.

G. KRÜGER.

MONSTERS (Biological).—'Monstra vocantur quia monstrant.' This ancient platitude may seem ridiculous to-day, but it has not yet lost its meaning entirely. Doubtless in a modern civilized society the birth of a two-headed lamb, of a 'bull-dog calf,' or of a cyclopioid child no longer excites attention as a portent of disaster or proof positive of witchcraft. Yet to a certain section of the community the objects present opportunities of enlarging the common store of biological knowledge. The specimens themselves demonstrate eloquently the possibilities of aberration in the processes of normal development and growth. They testify to the existence of numerous independent forces or influences, balanced delicately under normal circumstances. They point to a disturbance of the balance. They reveal the nature of individual influences, as manifested when one has been exerted in excess, to the exclusion or suppression of the countervailing factors.

In biology monsters are regarded as extreme instances of developmental varieties. Variations of lesser degrees constitute the class of 'abnormalities,' although, as explained in art. ABNORMALITIES (Biological), no hard and fast line separates the two groups. Many monstrous formations are determined by disturbances affecting the embryo or the foetus, though the post-natal period of growth is by no means free from disorders productive of a comparable result. And instances of the latter kind, such as retarded adolescence, or precocious senility, may be included fairly with others showing the extreme tenuity of the neutral zone between health and disease.

The study of monsters falls naturally into two divisions: (a) the investigation of their actual structure, and (b) research into the mode of their production.

(a) On the anatomical side a classification has been attempted, and it is based upon consideration of the part or parts actually affected. In view of the vast number of categories thus recognized, only the most cursory survey is possible here; and, instead of rehearsing the long list of classes and their subdivisions, it must suffice to note that, while the whole body has suffered in some cases, in others certain parts only will be found to be distorted.

The developmental history of monsters shows us that, as a general rule, the departure from what is normal will be greater and more complete in proportion as the disturbance was early in its occurrence. For in the first phases of development, when the total mass of the embryo is almost infinitesimally small, even a slight error will affect the rudiments of every organ and structure that is to be perfected subsequently. At this point again two distinct groups of monsters must be contrasted. In some cases the uterus may void its contents prematurely as a shapeless mass; to this, in human pathology, the antiquated term 'mole' is still applied. Or, again, the disturbance may lead to partial 'gemination,' i.e. to some distorted kind of twin-formation. Thus twins of equal size may continue to grow though connected with each other, and at the birth may produce such a phenomenon as the 'Siamese twins.' In other instances of this class the twins are quite unequal in point of size and, it may be, of development. As a result, an almost normal child may be born with an imperfect twin attached to it. The two are then distinguished as the 'autosite' and 'parasite' respectively. The parasite is most commonly attached to the autosite

in or about the middle line of the body. It may present almost any appearance, from that of a mere wart-like excrescence to that of a headless trunk with arms and legs. In rare instances the parasite has been found to be entirely enclosed within the body of its host, so that it is not visible externally at all.

Lastly, in yet another class of monsters, the process of gemination may have been complete but unequal, and one twin is born in a normal state, while the other is represented by a spherical mass, consisting of various tissues and rudiments of organs in the most complete confusion. Even the latter may be maintained alive throughout the intra-uterine period of existence.

Apart from these instances of 'twinning,' we may notice that certain particular structures such as the heart or the brain may be defective to the point of obliteration, while a large class bears witness to interference with such normal processes as the formation of the face or the closure of the walls of the body to protect the viscera.

(b) The study of the normal processes of development throws a flood of light on the problem of explaining the particular aberration responsible for the occurrence of a monster. Physiological investigations have dealt with the nature of the disturbing causes, and to these we shall now turn.

The artificial production of monsters first claims attention. In fish-hatcheries the occurrence is accidental and unwelcome, yet the frequency with which grotesquely-formed individuals appear among the fry is so well known as to be almost a matter of common knowledge. The eggs of the domestic fowl have been used for experimental purposes for at least fifty years past. In this department of biology the name of the French observer, C. Dareste, deserves special mention. The more usual modes of procedure are to subject the eggs during artificial incubation to selected abnormal influences. These may be of the nature of magnetic force, variations of temperature, or, again, the disturbances caused by partially varnishing the eggs, or by subjecting them to incessant rotation. In these ways various physical agencies have been shown to be influential in producing monstrous forms. Eggs of other animals (often those of Invertebrates) have been employed to test the effects of chemical agents or of altering the chemical constitution of the media in which the developing eggs normally rest. Such ova have also been the subjects of experiments in which the fertilizing element has been varied.

Physiological research of this kind has established clearly the susceptibility of the egg-cell to a variety of influences, whether these be physical, mechanical, or chemical. At this point another possibility seems to demand notice. The influence of so-called maternal impressions has long been discussed by those who are not prejudiced on this subject. Only the highest forms of life are suitable for observation or research in this respect, and it cannot be said that the potency of such impressions has been established.

Turning more particularly to human beings, it may be mentioned that medical research has shown that certain monstrous developments, viz. Acromegaly and Achondroplasia, are due to the excess or deficiency of certain fluids which normally pass with the blood to bathe the tissues of the body. In this department of research only the first steps have been taken as yet.

In such ways the anatomical study of monsters shows the investigator what parts have suffered, while the physiologist is able to point to the disturbing element. Thus we are left with the impression that, where the balance of reacting forces

is so delicate, no absolute standard of what is a normal form is possible. A normal individual is connected with others which we call abnormal by an infinite number of intermediate forms. And the abnormal examples in turn lead on to monsters.

That which is born is the outcome of a host of interacting forces. Its capacity to maintain existence and to reproduce its kind depends first upon its conformation, and then upon the environment in which it finds itself. Two remarks may be made in conclusion. Though the attribute of vast size is commonly associated with our ideas of monsters, yet from the biological point of view this is not necessary, and huge monsters are but representative of one out of many possibilities.

And lastly, while in this article the occurrence of monstrous forms among animals has been reviewed, it is to be remembered that most of the considerations here set forth are applicable equally to the vegetable kingdom.

LITERATURE.—Special mention may be made of C. Dareste, *Recherches sur la production artificielle des monstruosités*, Paris, 1877; other contributions to the literature are so numerous as to preclude even a partial enumeration here. Reference is made specially to the exhaustive bibliography provided by E. Schwalbe, *Morphologie der Missbildungen*, Jena, 1906.

W. L. H. DUCKWORTH.

MONSTERS (Ethnic).—1. Various kinds of monsters.—The existence of monstrous beings, human, animal, or diabolic, is believed in at all levels of culture. They are referred to or described in stories, traditions, or myths, or they are depicted or represented in some artistic form. Among savages monstrous animals are often supposed to exist, like the Bun-yip of Australian tribes—a mythic water-monster who carries off women—or the monsters or dragons said to swallow youths at initiation in New Guinea.¹ Frequently more or less distant tribes are believed to have some monstrous or abnormal feature—one eye, more than two eyes, eyes under the arms, vast ears, two or more heads—to be headless or featureless or of great size, or to possess tails. Ghosts, especially ghosts of those who have died a violent death, are often visualized as monsters of a more or less horrible kind, usually with a fondness for human blood. Among barbaric peoples similar beliefs are found, especially in Oriental mythology and folk-lore. Here whole classes or tribes of monstrous beings exist, like the *rākṣasas* of Hindu myth—hideous fiends with shape-shifting powers—or the evil *jinn* or the ghouls of Arabic belief, or the satyrs, centaurs, and cyclopes of Greek mythology. Here also human tribes of monstrous form are a subject of popular belief. The people of Jābah (Java?) were supposed by the Arabs to have their heads in their breasts.² Herodotus describes some of the tribes supposed to live beyond the region of the Scythians—men with goats' feet, men with one eye (the Arimaspi)—and other tribes believed in by the Libyans—monsters with dogs' heads or headless with eyes in their breasts.³ Pliny also writes copiously about such tribes.⁴ Irish mythology speaks of tribes of men with dog, or cat, or goat heads.⁵ Tribes or individuals covered with an abnormal growth of hair are often mentioned by ancient or mediæval travellers from the Carthaginian Hanno onwards.⁶ In Egypt monstrous creatures were often figured on tombs, and the god Bes is depicted as a dwarfish but monstrous and repulsive figure.

⁶ A. F. Le Double and F. Houssay, *Les Velus*, Paris, 1912, p. 126 ff.

The monstrous creatures of Babylonian and Assyrian art are well-known—winged bulls or lions with human heads, and other abnormal forms. These were set in front of entrances as a means of frightening away evil spirits, and a similar use of hideous figures is known elsewhere (see DOOR, vol. iv. p. 848 f.), at both lower and higher levels.¹

Among the folk everywhere monstrous beings have a real existence to the imagination, and are doubtless survivals of similar beings believed in by their forefathers. But the influence of Christianity was often to give a sinister aspect to the supernatural beings of the older paganism. The water-horse and water-bull of Celtic lore are typical examples of monsters which have still a real existence to the folk in remote districts. Demoniac beings are also often envisaged as monsters, and everywhere more or less repulsive giants and dragons have been subjects of popular belief (see DEMONS AND SPIRITS, GIANTS).

The mythologies of most races tend to give a demoniac, gigantic, or monstrous form to the supernatural enemies of culture—heroes² or the gods—Tāmat and her brood in Babylon, the opposing hosts of beings whom Rā daily conquered in Egyptian belief, the demons, giants, or monsters who strive with gods in Hindu, Greek, Teutonic, or Celtic myth. They typify chaotic powers as opposed to and conquered by the powers of order, and hence they constantly tend to be regarded as evil, while their opponents embody righteousness and goodness.

As early as the days of primitive man monstrous forms have been depicted in various ways. Thus in caves at Marsoulas and Altamira grotesque faces may represent demons, while other curious hybrid figures, half-human, half-animal, have been variously interpreted, but may represent monsters of the imagination of the Stone Age.³ Savage art tends to give all its human or supernatural subjects a grotesque, if not monstrous, form, often, no doubt, from lack of skill, but there is sometimes a deliberate exaggeration, in a horrible or grotesque direction, of features or of one or more members of the body. This monstrosity of feature is also seen in masks worn on ceremonial occasions by savages, and often meant to represent the faces of particular spirits.⁴ Indian art delighted to represent its divinities as many-headed or many-armed—a method which has spread into adjacent countries.⁵ Tibetan representations of demons or gods are often repulsive in their monstrosity. Reference has already been made to the monstrous Babylonian figures. In mediæval and later Christian art demons and the devil were depicted in the most sinister and horrible form possible—half-human, half-animal, or with exaggerated features, tusks, horns, tails, or with faces on chest, stomach, or knees.⁶

2. Origin of the belief in monsters.—Probably no single origin is to be looked for. There may have been different origins for the belief as a whole, or particular monstrous forms may have had an origin different from that of some other forms.

(a) Imagination is doubtless responsible for much of the monstrosity that is attributed to men, mythical animals, or demons in mythology or primitive art. As man's imagination peopled the world around him with spirits, so these appeared to his imagination as 'gorgons, hydras,

¹ Cf. a monstrous figure for scaring evil spirits from the Nicobar Islands (*Handbook to the Ethnographical Collections*, Brit. Museum, London, 1910, p. 77; cf. ERE iii. 435*).

⁵ Cf. HAND, HEAD, for other instances.

⁶ This is particularly noticeable in illuminated MSS or in pictures of the Temptation of St. Anthony type. Cf. Le Double and Houssay, *passim*.

and chimæras dire.¹ There was a constant tendency to visualize the creatures of belief as human and yet as more than human, as animal and yet as more than animal. As man drew little distinction between himself and animals, as he thought that transformation from one to another was possible, so he easily ran human and animal together. This in part accounts for animal-headed gods or animal-gods with human heads. Or, where gigantic superhuman strength, wisdom, or productiveness was concerned, man represented these to himself by forming images of the beings who possessed them with numerous or enormous heads or arms or phallus.¹ There is little doubt also that the lack of skill in depicting the human form tended to fill with suggestions of monstrosity the minds of those who gazed on such images.

(b) This last fact may have in turn influenced the dreams of men, and, as dream figures were realities, such forms were believed to have a real existence. But, apart from that, and especially when we consider the way in which dreams are deliberately cultivated by the medicine-man (see AUSTERITIES), they have, no doubt, had strong influence in the creation of monsters, of which the mind in waking hours could no more rid itself than could Frankenstein escape his monstrous creation. The combination of existing but diverse forms would easily occur in sleep, and such monstrous forms would play a part in the drama enacted during the hours of sleep. Such forms, seen in sleep by men to whom dreams had an intense reality, became a real part of the contents of the actual world in which they lived.² Primitive and savage men are like children, and they no doubt had their night terrors, caused by fantastic or horrible figures seen in dreams and still appearing to haunt them when sleep was rudely broken by the effect of fear. Again, hallucinations seen in waking hours by those whose mental balance was deranged might also aid in the creation of monsters, as they form part of the world inhabited by persons with certain kinds of mental affliction.

Long rows of horrible characters may pass in endless procession before the strained and wearied eyes; pictures of a vividness scarcely ever realised in normal life are presented, in which the most horrible acts are being committed by personages of frightful mien.³

Such hallucinatory appearances, described to the same, would by them be accepted as real, and it is probable that the medicine-man, living an abnormal life and given to seeing visions, is never quite sane. But, again, the savage in his waking life is probably the subject of hallucinatory impressions to a far greater extent than the civilized man. His psychic state when awake bears a close resemblance to his psychic state when asleep. What he thinks he sees is actual to him, and every illusion, however incredible or monstrous, is a fact.⁴ Even in cultured Egypt there were figured on the tombs the monstrous forms which the deceased thought he had seen in his lifetime.⁵

(c) Monsters, again, may owe their origin to a basis of fact. Any large predatory animal whose coming and going was obscure would tend to be

¹ Cf. HAND, HEAD; cf. the images of Hermes and similar images among the Bushmen, Admiralty Islanders, tribes of the Niger Coast, Yorubans, Fijians, etc. See A. Lang, *Myth, Ritual, and Religion*², London, 1899, ii. 276; *J.A.I.* xxviii. (1899) 110. A. B. Ellis, *The Yoruba-speaking Peoples*, London, 1894, p. 78; T. Williams, *Fiji and the Fijians*, I. do. 1858, p. 177.

⁴ S. Freud and his school have argued that the mythopoeic faculty is one akin to dream fancy. Myth is a kind of waking dream. See his 'Der Dichter und das Phantasieren,' in his *Sammlung kleiner Schriften zur Neurosenlehre*, Leipzig, 1911 f. Cf. K. Abraham, *Traum und Mythos*, Vienna, 1909.

⁵ A. Wiedemann, *Religion of the Ancient Egyptians*, Eng. tr., London, 1897, p. 179. The sphinxes, griffins, etc., were thought to be real creatures of the desert.

envisaged in still more awful guise. Some, indeed, have argued that belated survivals of now extinct animals may have suggested the dragons and other monsters of folk-tale and tradition, and, if this were true, it is certain that the impression made by them would easily become legendary.¹ Most savages have traditions of monstrous animals, which are really exaggerated forms of actual animals seen by their ancestors, but unknown to their descendants in their new habitat—e.g., the monstrous lizards of Maori tradition are the crocodiles of the land whence the Maoris migrated.²

Perhaps actual abnormal or monstrous births may have assisted in the formation of mythical monsters, or would tend to be regarded in popular belief as matters of common occurrence. Thus in China the standard histories are full of such prodigies.³ It is certain also, apart altogether from the possibility of abnormal births as a result of bestiality, that men have often speculated upon this or imagined the effects of such unnatural unions between different species of animals or between beasts and human beings. This is seen in universal folk-lore and in ancient myth, as well as in the half-gossiping histories and chronicles of bygone days and in the pseudo-scientific works on natural history from the time of Pliny onwards.⁴ Medieval theology also believed that the union of demons and human beings resulted in the birth of monsters.

The brutality or merely the hostility of other tribes, nearer or more distant, would inevitably cause them to be regarded in a still more sinister or monstrous aspect. Horrible deformities were attributed to them, or this or that feature was exaggerated, or habits of a peculiar villainy were ascribed to them—e.g., forms of loathsome cannibalism. Even remoteness or ignorance of such tribes would invest them with distorted forms. Here, probably, is to be seen the origin of the belief in those monstrous tribes already alluded to. Invading peoples, behaving with brutality, are sure to be regarded as monsters. In the same way the monstrous cannibalistic ogres of folk-tale are exaggerated forms of actual cannibals (see CANNIBALISM). Again, where certain deformities are assumed by warriors to strike terror into their opponents, where faces are painted or tattooed, masks or animal head-dresses worn, these are apt to become a real part of the men themselves.⁵ They are regarded as monsters rather than as men.

(d) Lastly, the misinterpretation of fact may easily give birth to monsters. This is especially seen where the bones of fossil animals of large size have been regarded as those of monsters or giants, or their tusks as the claws of monstrous birds—the griffin or the rukh. Hence the rise of many myths about these beings—e.g., of how they were slain by gods or spirits beneficent to men.⁶

There is no doubt that the belief in the existence of monstrous forms has had a profound influence on the mind of man, probably for the reason that, as has been proved experimentally, any abnormal shape has a strong power of suggestion.⁷

MONTANISM.—1. The movement now generally known, from the name of its founder, as Montanism had its birth at a village called Ardabau in the part of Mysia adjoining Phrygia, probably not far from Philadelphia (Ramsay, *Cities and Bishopricks of Phrygia*, p. 573). There, as it seems, about A.D. 156, Montanus, a recent convert, who had been a pagan priest, began to prophesy. His prophesying was accompanied by strange phenomena resembling those associated with demoniacal possession. In what way his exercise of the prophetic charisma was regarded by his opponents as differing from that of the genuine prophets we have various hints from nearly contemporary documents: he spoke while he was actually in a state of ecstasy; the true prophets received their message in ecstasy, but did not deliver it till their faculties returned to a normal condition. Moreover, the 'ecstasy' of Montanus was a kind of madness, deliberately induced, whereas prophets, acknowledged as such by the Church, even when in a state of ecstasy, were of sound mind; the so-called ecstasy of Montanus was, in fact, not *ἔκστασις*, but rather, as a contemporary writer (*ap. Eus. HE v. xvi. 7, 14*) calls it, *παρέκστασις*. In agreement with these statements an oracle of Montanus declares that the prophet is as a lyre played upon by the divine plectrum; and the form in which most of his extant utterances are cast implies that he was a mere passive instrument, and that the phrases which fell from his lips were actually the *ipsissima verba* of the Deity. His opponents reminded him of the style of the ancient prophets, who as human agents proclaimed the will of God—'Thus saith the Lord.'

2. After a time—as seems to be implied, a considerable time—Montanus was joined by two women, Maximilla and Prisoilla, or Prisca, who with his sanction deserted their husbands, and who also claimed to possess the prophetic charisma. Their utterances were similar in matter and in manner to those of their leader.

3. There can be no doubt that Montanus maintained that this 'new prophesying' differed essentially from all preceding prophecy. Thus the novelty of its form was to be explained. It was the fulfilment—so it was alleged—of the Lord's promise of the coming of the Paraclete (Jn 14¹²⁻¹⁸). The apostles had not the perfection of the Holy Spirit (1 Co 13⁸⁻¹⁰); this was reserved for the new prophets, of whom Christ spoke in Mt 23³⁴. This is stated to be the Montanist doctrine by many writers, and it is the basis of the exaggerated assertion of Eusebius (*HE v. xiv.*) that Montanus claimed that he himself was the Paraclete.

4. It is not clear whether in the earliest period the prophetesses were regarded as mouth-pieces of the Paraclete in the same sense as Montanus. Eusebius suggests the contrary when he reports that, while Montanus was held to be the Paraclete, the women were 'as it were prophetesses of Montanus' (*cf. Did. Alex. de Trin. iii. 41. 2; pseudo-Tert. Hæc. 7*). It is possible that at first they were put in a lower position, Mt 23³⁴, but not Jn 14¹²⁻¹⁸, being taken as referring to them; and that it was only at a later time, perhaps after the death of Montanus, that they were regarded as on a par with him.

5. It is evident that the acceptance of the 'new prophecy' as embodying the final teaching of the Paraclete, and as in some sense superseding earlier revelation, was the cardinal principle of Montanism. This is made manifest by the very phrase 'new prophecy' constantly used by its adherents; by the title *πνευματικοί* which they arrogated to themselves, as distinguishing them from other Christians (*πνευματικοί*) (*Tert. passim; Clem. Alex. Strom. iv. 13 [PG viii. 1300 C]*); and by the polemics of anti-Montanist writers, whose argument was

mainly directed to proving that this 'so-called prophecy' was in truth a false prophecy proceeding from the spirit of evil.

The charisma was not regarded as confined to Montanus and 'the women.' Theodotus, *e.g.*, was an ecstatic, and was reported to have died while in an ecstasy.

6. We are not surprised to learn that this sudden outburst of prophecy, and the claims that were made for its leaders, provoked much opposition. Many of those who heard Montanus and his companions would have silenced them. Two Phrygian bishops made an ineffectual attempt to 'prove and refute' the spirit that spoke in Maximilla; another, who had come from Anchiale in Thrace, attempted to exorcize Priscilla. At first, we are told, the movement advanced slowly: 'but few of the Phrygians were deceived.' But after a time, it seems, the majority of the Phrygian Christians became adherents of Montanus. Thus only can we account for the fact that at an early period his followers were commonly spoken of as 'the Phrygians,' and their teaching as 'the heresy of the Phrygians' (*cf. Φρύγες, ἡ κατὰ Φρύγας αἵρεσις*, whence the Latin *cataphryges, cataphrygiani*). In due course formal protests were issued by the bishops. While the movement was still in its infancy, Claudius Apollinarius, bishop of Hierapolis, wrote a treatise against it, to which were appended the signatures of many bishops, at least one of whom came from Thrace. Other confutations of the new teaching followed it (*Eus. HE v. xvii. 1*). Many synods met in Asia and excommunicated its adherents. On the other hand, the Montanists used scathing words about the ecclesiastical rulers, and stigmatized them as slayers of the prophets. They put forth treatises in which the arguments of their opponents were answered. It is impossible to determine with accuracy the date of the inevitable crisis; but it is certain that in Phrygia before the year 177 the Montanists were excluded from the Catholic Church (*Eus. HE v. iii. 4; cf. xvi. 22*, which clearly refers to the persecution under Marcus Aurelius).

7. It is difficult to fix the date of the beginning of the prophesying of Montanus. The choice is usually held to lie between A.D. 172, under which year Eusebius records the origin of the movement in his *Chronicon*, and A.D. 156-157, which is supported by Epiphanius (*Hæc. xlviii. 1*). It is not clear, indeed, that these two dates are inconsistent, for Eusebius may be giving the year, not of the earliest prophesying of Montanus, but of some prominent event which he regarded as the starting-point of the 'heresy'—*e.g.*, the migration to Pepuza (see below, § 9), or the promulgation of one of Montanus's more startling innovations. In any case it is probable that Eusebius's date is a mere inference from the fact that Claudius Apollinarius wrote his anti-Montanist treatise—which Eusebius appears to have dated on insufficient grounds after 174 (Lawlor, *Eusebiana*, p. 160 f.)—when Montanus with his false prophetesses was in the act of introducing his error' (*HE iv. xxvii. 1*). It must therefore be regarded with caution. It is to be observed that Apollinarius wrote some time after Montanus had been joined by 'his false prophetesses' (*ib. v. xix. 3*)—an event which was itself probably a good deal later than the beginning of the prophesying. Further, (1) the history of which a short account has been given in the preceding section requires a period of a good many years; and (2) Maximilla, the last of the three leaders, died in 179-180. The movement must have enjoyed the advantage of their supervision for a sufficiently long time to give it the strength and stability which it undoubtedly possessed. These considerations point to an origin much before 172. The earlier date is therefore to be preferred, though with the misgiving which necessarily attaches itself, in such matters, to the statements of Epiphanius. He has certainly fallen into error in one passage (perhaps two) in which he gives dates connected with the Montanist movement (*Hæc. xlviii. 2, li. 83*).

8. That the Paraclete was manifested in Montanus, and in him and his companions revealed the fullness of Christian teaching, was, as we have seen, the original and essential doctrine of Montanism. But, since it was the office of the Paraclete to supplement the teaching of Christ, it was to be expected that this doctrine would be made the basis of a system differing at many points from the teaching of the Church as usually understood. Montanus,

it is true, did not consciously deviate from ecclesiastical dogma. His opponents bear witness that he accepted the canonical Scriptures and was orthodox with regard to the resurrection of the dead and the doctrine of the Trinity. But in another sphere his 'innovations' were considerable.

9. Not long after the beginning of the prophesying Montanus crossed the Phrygian border and established himself with his followers at a city called Pepuza, which Ramsay (pp. 213, 573) places west of Eumenia, and not far from the Phrygian Pentapolis. Pepuza, with the neighbouring village of Tymion, he named Jerusalem. To this settlement, which was thenceforward the centre and holy city of Eastern Montanism, he endeavoured to gather adherents from all quarters. These facts, coupled with the lavish promises made by the prophets to their adherents and certain predictions of Maximilla (Eus. *HE* v. xvi. 9, xvii. 4; Epiph. *Hær.* xlviii. 2), apart from a more explicit oracle attributed to another prophetess (Epiph. *Hær.* xlix. 2), would lead us to the conclusion that the 'new prophecy' taught men to expect in the near future, at Pepuza, the final Parousia of the Lord (*ib.* xlviii. 14). The primitive Montanists, in fact, held the doctrine of chiliasm, but chiliasm of a new kind. It was this hope of the Parousia at their Jerusalem that gained for them the name of Pepuzians.

10. Connected in some measure with their chiliastic teaching was their view of the prophetic office in the Church. The prophetic charisma was not an occasional gift, bestowed as the need for its exercise arose; according to the dictum of 'the Apostle' (1 Co 13st ?), it was perpetual, one of the notes of the Church. Consequently Montanus, Maximilla, and Priscilla received their office in a line of succession. Quadratus and Ammia of Philadelphia were the links which connected them with Agabus, Judas, Silas, and the daughters of Philip (Eus. *HE* v. xvii. 3, 4; Epiph. *Hær.* xlviii. 2). But, since Montanus and his companions were the channels of the ultimate revelation, they were the last of the prophetic succession. After them would come the end.

11. Again, the exalted position given to the 'new prophets' led naturally to the assignment to them of prerogatives generally regarded as belonging to the bishops, and thus to a conflict between the prophets and the regular hierarchy. The prophets had the power of absolution (orac. *ap.* Tert. *de Pud.* 21). This power they shared with the 'martyrs' or confessors (Eus. *HE* v. xviii. 7).

12. Once more, the association with Montanus of two prophetesses involved the recognition that women might hold high office in the Church. Maximilla and Priscilla seem to have made independent contributions to Montanist teaching (Hipp. *Phil.* viii. 19; cf. Did. Alex. *de Trin.* iii. xli. 3; *ZKG* xxvi. 486); and they were probably in the habit of prophesying in the congregation (Eus. *HE* v. xvi. 9; *dxalpos*). There is evidence that, at any rate in later times, other women followed their example (Orig. *ap.* Cramer, *Cat.* v. 279), or even outdid it; for we read of a prophetess in Cappadocia in the 3rd cent., perhaps a Montanist, who baptized and celebrated the Eucharist (Firmilian, *ap.* Cyr. *Ep.* lxxv. 10), of female bishops and priests, and of virgins who regularly officiated in the congregation at Pepuza (Epiph. *Hær.* xlix. 2f.; Did. Alex. *de Trin.* iii. xli. 3).

13. Montanus made laws regarding fasts (Eus. *HE* v. xviii. 2: *ὁ νόμος τῶν νουθετήσας*; cf. Hipp. *Phil.* x. 25; Tert. *de Lei.* 13). This does not mean, apparently, that he increased the number or the rigour of fasts, but rather that he reduced them to rule, eliminating thereby the element of free will in such matters, making them a duty to be observed

by all Christians alike, and not only by those who used them as a means for attaining higher perfection. Among these ordinances (perhaps a later development, due to 'the women' [Hipp. *Phil.* viii. 19]) were some which enjoined abstinence from particular kinds of food (*ἐντροφαῖται*, *παφανοφαῖται*). There is some evidence that in Phrygia the Montanist rule as regards the number of fasts fell below Catholic custom (Soz. *HE* vii. 19, where the two weeks of Lent seem to correspond to the 'duae hebdomadae xerophagiorum' of Tert. *de Lei.* 15), while in the West it did not greatly exceed it (see de Labriolle, *La Crise*, p. 399 f.). The regulations about fasting are therefore to be regarded as instances of the Galaticizing or legal tendency which was desecrated in Montanism by its adversaries (Tert. *de Lei.* 14). This was the natural outcome of a system which invested the exhortations of the prophets with a divine sanction, giving them the character of unalterable laws, to be observed as ends rather than as means for the attainment of holiness.

14. Under the same category may be brought the Montanist repudiation of second marriages. For on this point their divergence from the Church must not be exaggerated. The Church discouraged second marriage; the Montanists held it to be fornication. That which the Church permitted in special cases the Montanists excluded by a law which admitted no exception.

15. We learn (Eus. *HE* v. xvi. 20, xviii. 5) that the Montanists held martyrs (including confessors) in high honour, and even set special store by their opinion on questions of doctrine and practice. But this was no peculiar feature of their system; it reflected the general feeling of the age. And, when they went a step further and allowed them the power to forgive sins, they were in agreement with the orthodox of the West (Tert. *de Pud.* 22), if not also with those of Phrygia. It must be added that there is no proof of the statement, often made, that Phrygian Montanism inculcated a severe asceticism, or that its adherents were more antagonistic to heathenism than other Christians in the same district, or displayed special eagerness for martyrdom. Such evidence as exists points in the opposite direction (Lawlor, *Eusebiana*, pp. 127-135).

16. Montanism, after its severance from the Church, though it retained the hierarchy of bishops, priests, and deacons, developed in its organization some peculiar features. Montanus was responsible for the innovation (as it was esteemed) of salaried preachers, and for the institution, doubtless connected therewith, of collectors of money, headed, as it seems, by a steward (*ἐπιτροπος* [Eus. *HE* v. xvi. 14]). St. Jerome (*Ep.* xli. 3) reports, in agreement with an ordinance of Justinian (*Cod. Just.* i. v. 20. 3), that the hierarchy consisted of the patriarch of Pepuza, *κοινωτοί* (apparently the successors of the stewards), bishops, and inferior ministers.

17. Of the peculiarities of Montanism here enumerated some were a revival—perhaps rather a survival—of the belief and practice of an earlier period; such, e.g., are the recognition of prophets as a permanent order (1 Co 12th, Eph 4th; *Didache*, 11 ff.), the prohibition of second marriage (Athenag. *Leg.* 33; Theoph. *ad Autol.* iii. 15; Iren. iii. xvii. 2), chiliasm (Just. *Dial. c. Tryph.* 80; Eus. *HE* iii. xxxix. 12f.). Others are in harmony with what is known of the Oriental religious temperament, especially that of the Phrygians, and may be accounted for by the influence of environment. Among these are the 'enthusiasm' of the prophets (Bonwetsch, *Gesch. des Montanismus*, p. 62 ff.), the ministry of women, and the expectation of an immediate Parousia (Hipp. *in Dan.* 18 f.; Orig. *c. Cels.* vii. 8-10). The substitution of Pepuza for the literal Jerusalem may be due to the same influence. It had, at any rate, the practical advantage of providing a holy city in the district from which Montanus drew the greater number of his adherents.

18. It is not necessary to pursue the history of

Eastern Montanism in detail. For some years after the death of Maximilla, the last of the original trio, in 179-180, there were no prophets, and the Church and the world enjoyed peace—facts which, as anti-Montanistic writers pointed out, disproved the claims of the first prophets. But the spread of the sect was not permanently checked thereby. A revival of prophecy seems to have taken place shortly before A.D. 200 (Eus. *HE* v. xviii. 3-12), and ultimately adherents of the movement were found in every part of Asia Minor, in Egypt (Clem. Alex. *Strom.* iv. 13 [*PG* viii. 1300 C]; Did. Alex. *de Trin.* etc.), and even in Constantinople, though they were always most numerous in Phrygia. The sect survived the stringent edicts of various emperors, and was perhaps not wholly extinguished till the period of the Turkish invasion (Ramsay, p. 574).

19. Before we turn to its history in the West, some important facts may be mentioned. The early Montanists were prolific writers. Their controversial tracts have been referred to above (§ 6). Here it is to be noted that Caius (c. A.D. 200) accuses them of composing new Scriptures (Eus. *HE* vi. xx. 3), while other authorities attribute numerous writings to Montanus, Maximilla, and Priscilla. A certain Asterius Urbanus compiled a collection of oracles of the prophets (*ib.* v. xvi. 17); and Themiso 'wrote a Catholic Epistle in imitation of the Apostle' (*ib.* xviii. 5). An anonymous author quoted by Eusebius alludes to literature of this class when he states that he hesitated to write against the Montanists for fear of being charged with adding to the Canon (*ib.* xvi. 3). It is clear that the 'new prophecy' was propagated by writing as well as by oral teaching.

A necessary result of this was a tendency to division. The Montanists must have regarded the writings of their own prophets as of at least equal value with the Scriptures: they constituted in fact, if not in intention, an enlargement of the Canon. It was inevitable that they should be used, like the canonical Scriptures, as authoritative expositions of dogmatic Christianity, and that, like them, they should be variously interpreted. By the end of the 2nd cent. there were two parties of Montanists, who took different sides in the Monarchian controversy, and both of them appealed to the oracles of the prophets as well as to the Scriptures (Hipp. *Phil.* viii. 19; pseudo-Tert. *Hær.* 7; Did. Alex. *de Trin.* ii. 15, iii. 18, 23, 38, 41; *ZKG* xxvi. 452 ff.; Tert. *adv. Prax.* 2, 8, 13). Thus the authority ascribed to the writings of the prophets produced a tendency to the formation of parties differing from one another in matters of faith, and probably also in matters of discipline. This tendency would be greater if, as seems likely, such writings were not collected into a *Corpus*. Each community would follow the teaching of such books as they happened to possess, without the obligation of harmonizing it with that of the books possessed by other communities.

20. A similar tendency is revealed in the fact that in the earliest times, apart from the title of Phrygians, which merely indicated the place of its origin (Clem. Alex. *Strom.* vii. 17), there was no generally accepted name for the sect. The various communities seem to have been commonly designated by the names of local leaders. Thus we hear of the followers of Proclus or of Æschines (pseudo-Tert. *Hær.* 7), the adherents of Montanus, Alciades, and Theodotus (Eus. *HE* v. iii. 4), the followers of Miltiades (*ib.* xvi. 3: probably the Montanists of the Pentapolis), the Priscillians, and the Quintillians (Epiph. *Hær.* xlix. 2; on the latter name see Voigt, *Eine verschollene Urkunde des antimontanistischen Kampfes*, pp. 107, 129 f.). Apparently the last name of this class to emerge

was that with which we are most familiar, 'Montanists' (first found in Cyril, *Cat.* xvi. 8). There are also nicknames, which we may suppose to have been merely local, and to have witnessed to local customs (cf. Jerome, *in Gal.* ii. 2). Such are the Artotyritæ of Galatia (from the use of bread and cheese in the mysteries), the Tascodrugitæ (from a peculiar way of holding the hands in prayer; of this Passalorynchitæ is a variant form; cf. Ramsay, p. 576), and the Ascodrugitæ or Ascitæ of Galatia (from orgies connected with a wine-skin [Epiph. *Hær.* xlviii. tit. 14; Filast. 49, 76; Aug. *Hær.* 76]). It is perhaps scarcely correct to speak of Montanism as a sect. In its later stages it was rather a congeries of sects somewhat loosely held together by an acknowledgment of the manifestation of the Paraclete in Montanus (cf. Voigt, p. 131).

21. The earliest notice which we possess of any knowledge of the Montanist movement in the West appears in the year 177. In that year the Christians of Gaul, acting as ambassadors for the peace of the churches, wrote letters to Pope Eleutherus and to the brethren in Asia and Phrygia expressing their opinion of the movement. Since Eusebius (*HE* v. iii. 4) pronounces their judgment 'pious and most orthodox,' it may be inferred to have been, on the whole, anti-Montanist. And this conclusion is confirmed by an examination of the account of the persecution at Vienne and Lyons, written at the same time (de Labriolle, *La Crise*, p. 225 ff.). If we may judge from two passages of Irenæus (*Hær.* iii. xi. 9, iv. xxxiii. 6 f.), who was their emissary to Rome, though they avoided the extreme position of the Alogi (see art. LOGOS, above, p. 137ⁿ), who in their zeal against Montanism rejected the Johannine writings, and though they refused to deny the existence of prophetic gifts or the right of women to prophesy in the church, they yet condemned the followers of Montanus as schismatics. It would seem that Eleutherus confirmed their judgment.

It is difficult to explain this incident without supposing that there was at the time a Montanist propaganda in Rome. No doubt the Montanist missionaries there were quickly followed (perhaps preceded) by representatives of the orthodox party in Phrygia; and it may be conjectured that among these was Avircius Marcellus of Hierapolis in the Pentapolis, 'the chief figure in the resistance to Montanism in the latter part of the second century' (Ramsay, p. 709). He certainly visited Rome with a purpose in some way connected with the welfare of the Church; and in one of the passages from Irenæus just referred to there are phrases which recall both the labours of the Gallican Christians for the peace of the churches (cf. Iren. *Hær.* iv. xxxiii. 7 with Eus. *HE* v. iii. 4) and a treatise dedicated to Avircius almost at the time when his famous epitaph recording the visit to Rome was written (cf. Iren. *Hær.* iv. xxxiii. 6 with Eus. *HE* v. xvi. 7 f., and see Ramsay, pp. 709 ff., 722 ff.).

22. Twenty-five years later, under Pope Zephyrinus, a fresh attempt was made to introduce Montanism into Rome. The Montanist leader Proclus held a disputation there with Caius, which was afterwards published, and some fragments of which remain (Eus. *HE* ii. xxv. 6 f., vi. xx. 3). The pope favoured the 'new prophecy,' and had actually put forth 'letters of peace to the churches of Asia and Phrygia'; but in the end, under the influence of Praxeas, these letters were withdrawn (Tert. *adv. Prax.* 1). There were doubtless later attempts of the same kind; one is referred to by St. Jerome (*Ep.* xli.). But Montanism was never strong in Rome, and it is not heard of there after the beginning of the 5th century.

23. It secured some foothold in Spain. But of its history in that region we know nothing except

that it had some adherents there at the end of the 4th century (Pacianus, *Ep.* i. 1 ff.).

24. In Africa the propaganda had more success. By the end of the 2nd cent. knowledge of the 'new prophecy' had reached Carthage—perhaps from Rome, less probably direct from Phrygia—and it gained there its most illustrious convert in the person of Tertullian. St. Augustine seems to have gone beyond his evidence when he stated that Tertullian at first opposed the movement; he was certainly in later life a sincere and ardent champion of the teaching of Montanus, as he understood it.

25. The qualifying words are necessary; for Montanism, as it appears in the pages of Tertullian, differs so much, and withal is so little conscious of difference, from the Montanism of Phrygia that we are compelled to suppose that his acquaintance with the teaching of the prophets was imperfect. He can hardly have received direct instruction from Eastern Montanists; his knowledge of their tenets must have been, in the main, derived from books, including a collection (*de Fuga*, 9; note the words 'et alibi') of the oracles of Montanus and Priscilla (he never quotes Maximilla by name), which was apparently incomplete.

Tertullian accepted, without reserve, the claim of the prophets to inspiration by the Paraclete. But, though he speaks of prophetic speech in a state of ecstasy (*de lei.* 3), we find no hint in his writings of the strange phenomena which were the normal concomitants of Montanist prophecy in the East. He tells us (*de An.* 9) of a sister who fell into an ecstasy during a church service; but she was not permitted to communicate the revelation which she had received till the congregation had departed. None of the usual anti-Montanist arguments (see *Epiph. Hær.* xlviii. 3-8) would have had any force against ecstasy so well controlled as this. Tertullian, indeed, identifies ecstasy with *amentia* (*adv. Marc.* iv. 22, v. 8), but with such qualifications of the meaning of *amentia* (*de An.* 45) as to bring him very near to the standpoint of Eastern orthodox writers. Moreover, with habitual inconsistency, he affirmed, in direct opposition to the Phrygians, that the apostles had the fullness of the Spirit.

Further, Tertullian seems to betray no consciousness of the doctrine that there was a succession of prophets from the days of the apostles to Montanus. In his view prophecy ceased with the Baptist (*de An.* 9, *de lei.* 12), till it was restored in the prophets of the Paraclete.

Again, Tertullian never mentions Pepuza. He was a chiliast, and he expected the Parousia in the near future; but he believed that it would take place in Jerusalem (*adv. Marc.* iii. 24). He cannot have read the oracle (*Epiph. Hær.* xlix. 1) which declared that the New Jerusalem would descend at Pepuza.

Tertullian agreed with the Phrygians in allowing to the prophets authority to absolve from sin, though he has some difficulty in reconciling this view with his own opinion that certain sins are unpardonable (*de Pud.* 19, 21). But he is indignant with those who hold that martyrs have a like prerogative (*ib.* 22).

On another subject he is in conflict with the Phrygians. He will not permit a woman 'to speak in the church, nor to teach, nor to baptize, nor to offer, nor to assume any function which belongs to a man' (*de Virg. Vel.* 9). If the sentence had been less trenchant, one might have supposed that it came from an anti-Montanist polemic.

26. Thus Tertullian rejected much that in Asia Minor was counted Montanist. And he added much, especially in the direction of rigorism, of acute opposition to paganism, and of avidity for martyrdom. For it is not to be assumed that,

when his later views differ from his earlier, and when he proclaims them as taught by the Paraclete, they were really derived from primitive Montanism. Thus in his *de Fuga* he denounces flight in persecution as sinful, though in his *ad Uxorem* (i. 3) he counts it lawful; and in his *de Pudicitia*, forsaking the milder teaching of the *de Pœnitentia*, he denies the power of the Church to forgive grosser sins. But in the former case he quotes oracles which make no reference to flight, and in the latter one which flatly contradicts his thesis (*de Fuga*, 9, *de Pud.* 21). In both, the oracles are more in harmony with his earlier than with his later opinions. Visions also enabled him to add, now a new doctrine (*de An.* 9), now a fresh rule of discipline (*de Virg. Vel.* 17), to the official teaching of the 'new prophecy.'

27. Even on subjects in which he was in entire accord with Eastern Montanism we find no essential difference between his earlier and later teaching; e.g., he expressed disapproval of second marriage in his pre-Montanist treatise *ad Uxorem*; the arguments used are identical with those of his *de Exhortatione castitatis* and *de Monogamia*, including that founded on the nearness of the end, which is more strongly stated in the earlier work. His description of marriage as a form of fornication occurs in all three. The result of his adoption of Montanist principles is seen merely in the fact that an absolute prohibition takes the place of a strong expression of disapproval; or, in other words, that he draws the logical conclusion from his argument. Here, as elsewhere, he found in oracles or visions only a new sanction for opinions already formed.

28. Thus we see that, if the form of Asiatic Montanism was largely determined by environment, and possibly by the influence of individual leaders, the form of African Montanism, or, as it was afterwards rightly called, 'Tertullianism,' was determined by the personal force of Tertullian himself, and doubtless in some degree by the environment which moulded his character. We cannot forget that the home of Tertullianism was later to become the home of Novatianism and Donatism.

29. If it be asked, What was there in Montanism to attract such a man as Tertullian? it must be remarked that he was unaware of, or ignored, many of those features of the movement which to Eastern opponents caused most scandal. There remained the proclamation of the inspiration of the living Church, burdened with a few corollaries, most of which had been anticipated by his own thinking. Premising this, we may accept the answer of Swete (*Holy Spirit*, p. 79): 'For Tertullian the interest of Montanism lay chiefly in the assurance which the New Prophecy seemed to give that the Holy Spirit was still teaching in the Church.' It need only be added that the acceptance of the Montanist oracles as embodying the teaching of the Paraclete was made easier for him by the support which they seemed to give to opinions which he maintained in opposition to other Christians.

30. The Tertullianists seem to have become an insignificant body after the death of their founder. They are never referred to by St. Cyprian, in spite of his veneration for Tertullian. The last adherents of the sect returned to the Church when St. Augustine was at Carthage, and he reports that, when he wrote his work on heresies, their basilica was in Catholic hands (*Hær.* 86).

MORAL ARGUMENT.—'Moral argument' is distinguished from logical either in the nature of the facts to which appeal is made or in the assurance which the conclusion expresses. It is possible that both implications are associated with its meaning. But in general it is often used to denote some probability in the nature of it as distinguished from the certitude of logical argument.

It is probable that the term derived its specific import from the implications of the 'moral argument' for the existence of God and immortality in the Kantian philosophy. In this method of 'proving' them Kant remarked the impossibility of meeting the demands of the moral law in this life, and, as this law required the adjustment of duty and happiness, he sought this realization in a life to come. To effect this adjustment the existence of God was supposed to be required. This argument was assumed to be valid when all the logical arguments for the same conclusion were null and void. The want of absolute assurance implied in the conclusion was transferred to all arguments which gave what is called 'moral certainty.'

It also derives part of its meaning from the implication that the moral order of things favours or expresses the ultimate significance of what lies behind it. That is, the assumed rationality of things is taken to imply the nature of the causal agency behind it, and the 'moral argument' is an expression of what is supposed to be implied by the admission of an actual moral order in the world, while the logical argument is supposed to be limited to a physical order and its implications.

A fuller exposition of Kant's moral argument for the existence of God and immortality is the following:

Happiness is the natural condition of a rational being in the world, and is the natural accompaniment of virtue. In fact, the moral law itself requires a union or synthetic connexion between virtue and happiness. But in the present natural order this ideal union is not effected, and we cannot treat the world as rational unless it provides for this connexion between them. The connexion requires an infinite time for its realization, and hence we have to postulate immortality as the condition of realizing the demands of the moral law which holds valid for the present. Immortality thus becomes a necessity of a rational order. But this union of virtue and happiness, not being a necessary one, requires the causal interposition of something to bring it about. Since we postulate immortality as the condition of rationality, we postulate the existence of God to effect the realization of happiness in connexion with virtue. The argument, thus, is that morality, if valid and binding at all, requires God and immortality to make its imperatives rational and its rewards possible.

Bowne, *Theory of Thought and Knowledge*, London, 1897, pt. ii. ch. v.; Kuno Fischer, *Immanuel Kant und seine Lehre*, Munich, 1882, ii. 118-126. JAMES H. HYSLOP.

MORAL EDUCATION LEAGUE.—Following on the rise of the Ethical Movement (*q.v.*) in

England, a number of persons interested in the training of the young began to study methods of imparting moral instruction on an ethical basis pure and simple, and in such a manner as to meet the needs of children drawn from all denominations. The Union of Ethical Societies seized the opportunity of an approaching election of the London School Board to invite a wide variety of societies to send delegates to a conference. In July 1897 the delegates met under the presidency of Frederic Harrison, and adopted a policy of which the two leading statements were as follows:

(1) 'That there is urgent need of introducing systematic moral instruction without theological colouring into the Board schools in place of the present religious teaching.'

(2) 'That this moral instruction should be made the central, culminating and converging point of the whole system of elementary education, giving unity and organic connection to all the other lines of teaching, and to all the general discipline of the school life.'

A direct result of this conference was the establishment of the Moral Instruction League at a well-attended meeting in St. Martin's Town Hall on 7th December 1897, and annual meetings have been regularly held and reports issued since January 1898. The original object, 'to substitute systematic non-theological moral instruction for the present religious teaching in all State schools,' was changed, in 1901, to the purely constructive policy 'to introduce systematic non-theological moral instruction into all schools.' On the same principle, the object was, in 1909, relieved of the phrase 'non-theological,' and made to run thus: 'To urge the introduction of systematic moral and civic instruction into all schools, and to make the formation of character the chief aim in education.'

At the same time the title of the society was altered to the Moral Education League. The League, however, definitely affirms that it 'works on a non-theological basis,' and both its considerable output of literature and its practice during the seventeen years of its history (1898-1915) have obviously exhibited its detachment from all forms of sectarian and denominational principles. Its supporters in the earlier stages made attempts, with some success, to induce parents to take advantage of the Conscience Clause of the Education Act of 1870, withdraw their children from religious instruction, and apply for special moral lessons. These efforts ceased as the League became more absorbed in its scheme for building up a sound method of civic teaching, and for illustrating that method by lessons publicly given under the direction of a Moral Instruction Circle. The Circle was nominally conducted by the Union of Ethical Societies, but naturally proved very useful to the League as a means of propaganda, and it was maintained for several years. Active dissemination of the League's views by meetings, in the press, and among Education Committees and Members of Parliament gradually leavened public opinion. In 1904 the Government Education Code appeared with a preface in which character-training was emphasized; in 1905 the official volume of *Suggestions for the Consideration of Teachers and Others concerned in the Work of Public Elementary Schools* contained a section on the formation of character; and in 1906 the Code, issued by Augustine Birrell, directed local authorities to devote 'greater and more systematic attention' to the subject, though the choice of 'direct' or 'incidental' methods was left open. In 1909 a debate on moral instruction, led by G. P. Gooch and William Collins, took place in the House of Commons, and a deputation, largely composed of League representatives, waited upon the Minister of Education (W. Runciman) in May of the same year. Since that date the League has been quiescent in the political field, and has mainly

devoted its energies to influencing the opinion of educationists and the general public. A return issued by the League in 1908 showed that, of the 327 local education authorities in England and Wales over 100 had taken definite action in emphasizing moral instruction in their schools, in some cases by setting apart a lesson in the secular time-table, but usually by incorporating special moral elements in the religious course; and twenty authorities had adopted the syllabus drawn up by the League. Besides this syllabus, which supplies a detailed series of notes for the seven standards, the literature of the League includes a number of text-books by A. M. Chesterton, Baldwin, Waldegrave, Robson, Reid, Wicksteed, and F. J. Gould, numerous pamphlets, a Quarterly (beginning April 1905), and a volume designed for use in India (*Youth's Noble Path*, 1911). The education authorities in Bombay, Ceylon, and Mysore have evinced practical interest in the methods of the League; and significant sympathy has been shown by H. H. the Gaekwar of Baroda, and many other Indians as well as Anglo-Indians. Each annual report testifies to a spirit of inquiry aroused in various colonies and foreign countries. A remarkable testimony to this spirit was afforded in 1907, when a committee of inquiry into moral instruction and training in schools examined witnesses and collected papers, its report being published in two volumes in 1908 (vol. i. 'United Kingdom,' vol. ii. 'Foreign and Colonial'). The inquiry was carried on independently; but several members of the League sat on the Committee and contributed to the volumes just named. A still more striking reinforcement of the League's endeavours appeared in 1908 in the shape of the first International Moral Education Congress, held in London under the secretaryship of G. Spiller. A similar congress was held at The Hague in 1912.

F. J. GOULD.

MORAL LAW.—The concept of law is one of the two concepts which may be taken as fundamental in an ethical system. According as we start from the idea of a good to be attained or of a law to be obeyed, we have a teleological or a jural theory of ethics. The former of these was the characteristic type of Greek theories; the latter became predominant in Christian times. Under the teleological conception morality is looked upon as fundamentally a matter of self-expression or self-realization, and its laws are regarded as rules for the attainment of a good which every man naturally seeks. It is in this sense that Socrates was able to maintain his paradoxical position that no man is willingly vicious and that all vice is ignorance. Such a position is essentially a naturalistic one, implying a native goodness in human nature which needs only enlightenment to realize its natural good. Moral conduct is the rational pursuit of happiness.

In a jural system of ethics, on the other hand, human nature is conceived as divided against itself and therefore in natural opposition to the good. Morality is not a harmonious development of natural powers guided by the idea of happiness, but a life of discipline and subordination to an authoritative law. It is not the natural value or the pleasure of an act that renders it moral, but its value as commanded by the law. It is not commanded because it is good, but it is good because commanded.

It is evident, therefore, from this distinction of starting-points and attitudes that the term 'moral law,' in its strict meaning, denotes an imperative, regarded as having practical efficacy in conduct. The idea is of an order which is to be imposed upon human nature and, accordingly, to be accepted by the rational will. One must, therefore, dis-

tinguish between such an imperative, which does not rest upon any natural desire for happiness, and a moral rule or law in the teleological sense of the term. The moral laws, in the teleological view, are not imperative, but counsels of prudence, pointing out the best ways for the attainment of happiness. Their practical efficacy rests upon a natural desire for satisfaction, and hence, in their hypothetical character, they have more the nature of uniformities in the scientific sense of the term 'law.' They are rules of applied psychology. Although such rules are often spoken of as laws, yet, lacking the element of imperativeness, they are perhaps better not designated by that term.

Historically, the conception of morality as law is an early one, primitive morality consisting in obedience to tribal custom regarded as ultimately imperative for the individual. When ethical reflexion awakes, however, with its scepticism and questioning of authority, the natural view of morality is the teleological one, and the concept of moral law gives way to that of good. Experience and a deepening of the moral and religious consciousness, such as occurred in the Hellenistic age and in early Christian times, revived the dualistic idea of morality, and we have the Christian theories with their central doctrine of moral law and obligation. While these were at first theological in character, in modern philosophy we find the idea of law maintained also upon a natural basis.

Considered with reference to the nature of moral law and its authority, three types of system may be distinguished: (1) theological, (2) natural, and (3) rational.

1. **Theological.**—In the theological systems moral law is regarded as a rule of conduct which has its ground in the nature or will of God and not in the nature of man or in the consequences involved in obedience or disobedience to the law. The rule may be for the good of man, but it is for his good because it is the divine will, and not the divine will because it is for his good. 'Man's chief end is to glorify God and to enjoy him for ever.' God is the beginning and the end of the moral world, man but an incident in the creation. Sometimes it is the will, sometimes it is the intellect, that sets the standard, but in all cases systems of this type are theocentric in nature. To this type belong the various forms of scholastic theory, so far as they succeed in really breaking away from their classical originals, as well as the chief systems of Protestant moral philosophy.

The serious difficulty in theological systems has always been the question of the authority of the divine law and its hold over the individual. Emphasis upon the divine has tended by contrast to raise new centres of interest in the human, and men have always refused to remain satisfied with the idea of a law whose basis is outside themselves. The significant element has therefore been found either in the consequences of the law for man, in which case we have a utilitarian principle, or in the human nature itself, under which hypothesis we have a natural basis for morals.

2. **Natural.**—Natural law as a basis for morals may therefore be described as an order of human nature, known to be such by the unaided reason of man, and recognized as binding without reference to the desires or pleasures and pains of the sentient life. Man knows himself as properly of a certain nature, and cannot reasonably depart from the rules involved in its realization. These rules are not imposed from without, but are the expression of his own nature and binding only as such. To be moral is to be truly a man, and to be truly a man is to be truly a rational animal. The norms of reason are the moral laws. This type of theory

was prevalent in the earliest period of modern ethics, and represented the attempt to place morals upon a rational basis. The general idea takes various forms as it is expressed in the Stoic formulæ of Grotius and the Neo-Platonic doctrines of the Cambridge Platonists and their like. While theistic in their philosophical implications and foundations, these systems agree in their desire to free morals from theological authority and to found them upon an immanent rather than a transcendent basis. Yet in so doing they tend to lose their jural character and revert to the teleological type of their Greek originals. The dictates of reason which reveal these moral or natural laws are indeed authoritative, but their authority really rests upon the value of the good end or ideal which they express. Moral law, when rationalized, ceases to be supreme, whence it was very easy for the transition to be made from these Platonizing systems to the early forms of English utilitarianism. Indeed, in spite of their legal terminology, it is hardly accurate to include them at all under the jural type; they are the natural compromises of the transitional period.

3. Rational. — The rational interpretation of moral law finds its clearest expositor in Kant. It is true that Butler formulated the traditional English theory of conscience half a century earlier, but even in his conception the supremacy of conscience does not involve independence of consequences; its function is to decide between the rival interests of self-love and benevolence, not to dictate a law irrespective of either. It was Kant's merit, as he conceived it, to separate out the pure principle of a moral law and present it free from any admixture of motions drawn from a consideration of consequences. To be moral is not to seek to satisfy a desire for anything, however good, but to obey a dictate of reason determined by nothing outside its own rationality. A moral law is thus a categorical imperative addressed by the reason to a being not naturally inclined to obedience. The motive to obedience is respect for the law itself whose authority we feel in our sense of moral obligation. The law, as grounded neither in the nature of God nor in its consequences for man, is thus absolute and the expression of a free reason which commands of itself alone, or is autonomous—to use Kant's term. That there is such a categorical imperative is the only fact given us by pure reason, and that, if there are free beings, they must govern themselves by such laws is evident; but how there can be free beings at all, and how we as sentient beings can be subject to such absolute dictates of reason—these are matters involved in the mysteries of personality. The form of such a law, as independent of consequences, must be abstract. Be rational, or 'act from a maxim fit for universal law,' is the formula. It is thus essentially negative—a critical test rather than an informing principle. No act is to be done whose maxim is not capable of universalization, but no principle is given us, apart from experience, by which to determine any positive control for the will.

In its illustration of this rational concept of moral law, Kant's theory also illustrates most adequately the jural concept of morality in general, the essence of which, as in Kant's system, is the primacy and absoluteness of law. In the theological forms the law tends to become heteronomous and foreign, and hence immoral, while in the natural systems it tends to subordinate itself to the concept of good and thus lose its jural character. In Kant's system alone is it at once a law and absolute.

LITERATURE.—F. C. French, 'Concept of Law in Ethics,' in *Philos. Rev.* II. (1893) 35-53, also published separately, 1892; E. Zeller, *Vorlesungen und Abhandlungen*, Leipzig, 1865-84; H. J. S. Maine, *Ancient Law*¹⁰, London, 1906; Thomas

Aquinas, *Summa Theologica*; H. Grotius, *De Jure Belli et Pacis*, Amsterdam, 1720; R. Cudworth, *Treatise concerning Eternal and Immutable Morality*, London, 1731; J. Butler, 'Sermons on Human Nature,' Works, ed. J. H. Bernard, do 1900; I. Kant, *Fundamental Principles of the Metaphysics of Ethics*, tr. T. K. Abbott, do 1895. NORMAN WILDE.

MORAL OBLIGATION.—The word 'obligation' comes from Lat. *obligare*, and implies that we are bound to some rule or norm. While legal obligation involves, in any last analysis, some external coercion, moral obligation assumes an inner compulsion, a sense of the personality being bound by that which may have no external authority to enforce it, and which, indeed, may be but very imperfectly formulated. Language bears witness to a universal human experience of a sense of this obligation or 'oughtness.' Even the most primitive speech reveals the sense of an inner compulsion, an inner voice that says 'I must.' In its actual history, however, this inner compulsion has rarely been quite separated from the sense of some external coercion. We find it first expressed in a series of more or less definite inhibitions. Its earlier chapters are written in a series of commandments, saying, 'Thou shalt not,' and this primitive morality is based upon customary and largely external usage. It is, moreover, shaped and sustained in an increasingly elaborate system of 'tabus,' which form a link between the external and internal authorities. The realization of an internal authority as compelling as any external coercion is a relatively recent conception. Indeed, only quite recent discussions have clearly distinguished in theory what practical purpose early made definite, namely, that to the extent that coercion becomes foreign to the agent's will, to that extent it ceases to be the agent's action. Moreover, older moral reflexion failed to draw any sharp line between the sense of moral obligation, as a category of the practical understanding, and that empiric content of the rule or norm to which the moral agent feels himself bound.

1. Uncritical religious intuitionism ascribed both the sense of moral obligation and the content of the ethical code to an innate sense, and regarded both as a divine implanting in the human soul. Thus to both was ascribed a certain absolute and fixed character that often ended in an unreal and static morality. Religious and philosophical history and reflexion have revealed the fact that all codes are, in part at least, subject to change according as social and economic conditions change. And, as it became clear that empiric morality was thus conditioned, the question naturally arose whether the whole sense of moral obligation was not equally empiric and destitute of any normative or permanent character. Men began to seek its origin in the ebb and flow of human tradition. Thus arose the question of the seat of this inner voice and the historic genesis of conscience.

2. Greek intellectualism was prone to seek the origin of this sense of obligation in the rational process. Plato represents Socrates as identifying all moral obligation with rational insight, and he himself taught that morality recognized the given heavenly types or norms of conduct in the eternal ideas of the good. And, though Aristotle parted company at this point with Plato, and saw the social and empiric character of the ethical norms, yet on the whole Greek intellectualism never succeeded in keeping clearly apart these two elements in every ethical situation—the code of morals to which a moral agent is bound and the inner compulsion by which he is bound. Hellenistic ethics thus swung between an uncritical intuitionism and an equally uncritical empiric rationalism. It may now be taken for granted that, though the discursive reason is and always must be concerned

in every ethical situation, and is more particularly interested in the critical analysis of every given code of ethics, nevertheless it is vain to seek the origin of the sense of moral obligation in the rational process alone. Nor can we successfully resolve moral obligation into clear rational insight into consequences of any kind.

3. Critical rationalism began with the work of Hobbes, Locke, and Hume. Locke had little difficulty in showing how untenable was the uncritical intuitionism that sought for innate codes of morals. But both Hume and Hutcheson leave unanalyzed a 'moral sense' as something ultimate. This moral sense Adam Smith, in his brilliant ethical treatise, sought to resolve into sympathy, or at least to trace its origin to sympathy as a natural attribute of man. It was distinctly on the basis of this critical rationalism that Bentham and the two Mills made their famous analysis of the sense of moral obligation in terms of utility, and more especially of social utility. So far as this empiric rationalism dealt with the codes of morals found in human history, it was fruitful and stimulating in a high degree. At the same time, it became increasingly evident that empiric utilitarianism could build no bridge from the socially useful to the sense of personal responsibility to be socially useful. And, when John Stuart Mill conceded an intuitive capacity for estimating values as higher and lower, and thus also a capacity for the intuitive recognition of moral values as higher over against other types of value, clear-eyed critics of rational utilitarianism realized that Bentham's system had gone into bankruptcy.

4. Biological evolution, however, infused new life into the discussion as to whether the origin of the sense of moral obligation might not be found in the socially useful. It was suggested by Darwin himself that the conflict of instincts, and the survival of groups obeying the instincts that made for group-perservations, would in a long process of development link the socially useful with the morally right, and this line of inquiry has been followed up by Leslie Stephen, Alexander Sutherland, E. Westermarck, L. T. Hobhouse, and others. The exceedingly useful light that this line of research has thrown upon the gradual development of empiric codes of conduct has led to confusion of the two issues involved. It may be readily conceded that the socially useful has determined in a measure, perhaps we may say in large measure, what men consider morally right, but the origin of the category 'moral obligation' remains unexplained. Evolutionary analysis has not as yet succeeded in building a bridge between the socially useful and the sense of moral obligation to the group. Somewhere at some time such a sense must appear in unmoral life as a variation, and, this variation having been once assumed, law and morals link themselves with group purpose, as von Ihering abundantly shows (*Der Zweck im Recht*², esp. vol. I, ch. vi.), but the biological analogy has been distinctly overworked, and it is becoming increasingly evident that evolutionary philosophy must assume variations and does not explain them. Thus on the ethical field origins are no more explained than on the biological, and the sense of a moral obligation cannot so far be successfully analyzed into unmoral elements. Moreover, even in detail the sense of individual moral obligation presents many difficulties in connexion with the socially useful, for historically it is easy to show that the sense of moral obligation has time and again protected courses of conduct patently socially detrimental.

5. Critical intuitionism is therefore in many different phases reasserting itself, and, especially on the ethical field, there are many attempts to re-state more satisfactorily the position of Kant and

Lotze. There is some return to Jacobi and Fries, and the philosophies of Wundt, Eucken, Eisler, James, and Bergson are suggesting new formulations for the sense of moral obligation as a category of the practical reason incapable of further analysis—an empty concept, it is true, in this form, whose content is given in empiric experience and is subject to the laws of evolutionary process and progress, among which laws the socially useful is one of the most important factors. Thus from the psychological point of view Wundt and James, as well as Eisler and others, assume the capacity for moral distinction and the sense of moral obligation, without attempting to analyze the category further, while realizing that the content of moral appreciation is a subject for scientific examination, and has its own evolutionary history. From this point of view the feeling of moral obligation arises as a variation, and maintains itself by its social usefulness. Bergson has as yet given no development of his philosophy along ethical lines, but the revival of a critical intuitionism has found support in his main contention, and followers of Fries and Jacobi see in the sense of moral obligation the evidence of a capacity for reaching beyond the phenomenal, and link this with a re-statement of the Kantian argument for God's existence. According to this school, the fundamental significance of the sense of moral obligation is the compelling power of the purposeful character of life. The unity of our mental and spiritual life demands that moral judgments be not irrational, even though complete rationalization may be beyond our power. However divergent the empiric codes of social behaviour may be, the existence of a moral obligation is an element everywhere; hence the very rational process itself is involved in a defence of the inherent validity of moral obligation.

6. Conclusion.—Moral obligation may then be said to so far defy any further ultimate analysis, and its origin is as mysterious as are all other origins and variations. It is a category of the practical reason, and is in so far super-rational, but the contents of the moral judgment are subject to the rational process, as in the sphere of the phenomenal. Thus the total ethical complex reveals rational, sympathetic, eudæmonistic, and hedonistic elements. But into no one of these can the fundamental sense of personal obligation be quite successfully resolved. Moreover, this sense of inner compulsion, covering as it does fields of action which no external coercion could regulate, is everywhere becoming the regulative principle of human society, displacing in the moral man outward law, and giving the sense of new freedom, because our obligation is the categorical imperative of the informed conscience, and has its seat within, and is not based upon, outward law with its concomitant of external coercion.

THOMAS C. HALL.

MORAL SENSE.—The term 'moral sense' is practically equivalent to 'conscience,' and shares the field of ethics with such principles as rectitude and duty, happiness and social health. In the form of *συνείδησις*, the term 'conscience' appears as early as Periander and Bios (Stobæus, p. 192. 21); as an approving and fortifying moral sense, Epictetus uses the synonym *συνείδω* (bk. iii. ch. xxii.), while the disapproval of *conscientia* is referred to by Cicero (*Laws*, i. 14). Upon the basis of a natural moral sense, St. Paul speaks of the Gentiles as those who performed by nature (*φύσει*) the works of the law, being guided by conscience (*συνείδησις*, Ro 2¹⁵). The appreciation of an inner moral sense distinct from external commandment seems to have been indicated by Sophocles in the *Antigone*, where the heroine appeals to a higher principle of action, while she repudiates the established law; the Sophists' distinction between *φύσις* and *θεός* further marks off the internal sanction of conduct from all forms of external statutes. However important the principle of a moral sense may appear to be, it cannot be denied that the most profound moral systems have been elaborated in independence of it. Socrates based Greek ethics upon the general principle of knowledge, whence Plato and Aristotle, Stoic and Epicurean, perfected the ancient ethical ideal, leaving the ethics of conscience to the minor moralists. The meagre development of ethical theory in mediæval times failed to develop the notion of a natural moral sense; it is in modern systems of ethics that the analysis of the moral sense is to be found; even here such ethical philosophies as those of Kant and Spinoza were perfected without appealing to a special sense of morality.

When modern ethics began with Hobbes, it was the opposition to relativism and egoism that led R. Cumberland (*de Legibus Naturæ*, London, 1672) to postulate conscience and benevolence as the true foci of conduct, although it was the latter principle that received chief emphasis. As a deist, Shaftesbury insisted upon a 'natural sense of right and wrong' (*Inquiry concerning Virtue*, London, 1699, bk. i. pt. iii. 2), which he identified with conscience, and thus spoke of 'religious conscience' and a 'displeasing consciousness' (bk. ii. pt. ii. 1). With F. Hutcheson the moral sense was discussed more æsthetically than ethically in the form of a disinterested regard for universal humanity, whence he inquires,

'If there is no moral sense . . . if all approbation be from the interest of the approver, What's Hecuba to us or we to Hecuba?' (*Inquiry concerning Moral Good and Evil*, London, 1726, sect. i. 2).

J. Butler was the first to subject the moral sense to exact psychological analysis, whence he regards conscience as the 'principle in man by which he approves or disapproves his heart, temper, and actions' (*Sermons upon Human Nature*, London, 1726, serm. i. [*Works*, ed. J. H. Bernard, London, 1900, i. 31]). This inward sense of approval and disapproval is further regarded as a principle of 'reflexion' whose essence is that of 'authority' (serm. ii.). Butler tends to complicate the problem when he asserts that the dictate of conscience is ever in accordance with the impulses of reasonable self-love, while the supreme sanction of the moral sense is found in the principle of harmony with nature.

Among the ethical idealists of the 18th cent., Richard Price and Kant opposed the notion of a moral sense as such, and sought in reason the ultimate moral authority. In his *Review of the Principal Questions and Difficulties in Morals* (London, 1758), Price denies the validity of Hutcheson's 'moral sense,' and appeals to the 'understanding' as the ground of ethical distinc-

tions, although Price's treatment of the understanding makes it possible for him to depart from mere rationalism, and repose in a Platonistic 'intuition' (ch. i. sects. i., ii.). Kant, who derived moral distinctions autonomously from reason, whence also springs the categorical imperative, treats the moral sense with contempt when he says:

'As to moral feeling, this supposed special sense, the appeal to it is indeed superficial when those who cannot think believe that feeling will help them out, even in what concerns general laws' (*Metaphysic of Morals*, tr. T. K. Abbott, London, 1889, p. 61).

In its treatment of the moral sense, then, the Enlightenment (*q.v.*) insisted upon something even more rationalistic than conscience.

If the tendency of the 17th and 18th centuries was to regard the moral sense as something rational, the tendency of the 19th and 20th centuries has been to reduce the principle in question to the social. In the middle of the 18th cent. Adam Smith inaugurated the career of social ethics when he sought the source of moral sentiment in 'sympathy.' The first to raise the question concerning the origin of moral sense, Smith had no hesitation in founding the ideas of propriety, merit, and duty upon the instinct of natural sympathy (*Theory of Moral Sentiments*, London, 1759). A century later Darwin connected the moral with the biological, and thus made the moral sense dependent upon the predominance of the social tendency in man. To 'sociability' Darwin adds the principle of 'reflexion,' without which the social could not have become ethical, so that the ideals of Butler, to whom Darwin pays due tribute, have not been wholly lost to view (*Descent of Man*, London, 1871, ch. iii.). Equally significant with the departure from the rational is the change from the individualistic to the social; for, where Butler identified conscience and reasonable self-love, Darwin united conscience with the non-egoistic in human nature.

When biological ethics transferred the seat of the moral sense from the self to society, much of the phenomenology of conscience, shame, approval, obligation, etc., seemed intelligible; at any rate, 'scientific' ethics has assumed that the social is conclusive, as appears from such a work as L. Stephen's *Science of Ethics* (London, 1882), where biological, social, and ethical are firmly linked (ch. viii.). In opposition to Stephen, and in the general style of Butler, J. Martineau has insisted upon the rational and individualistic conception of the moral sense (*Types of Ethical Theory*, Oxford, 1885, vol. ii. bk. ii. ch. ii.).

Where the moral individualism of the 18th cent. has practically succumbed before the advance of social ethics, there has arisen an æsthetic individualism which, while not allying itself with the moral-sense theory, has not failed to make vigorous warfare upon the social conception of life. Beginning with the romanticism of Friedrich Schlegel and the realism of H. B. Stendhal, and advancing with the *Décadence* of C. P. Baudelaire, this anti-social view has come to a climax in Nietzsche, who stigmatizes the compunctions of the social moral sense as so much 'bad conscience' from whose terrors he would emancipate mankind (*A Genealogy of Morals*, tr. W. A. Haussmann and J. Gray, London, 1899, pt. ii.). In the same manner Ibsen speaks of the modern man as one who, suffering from 'sickly conscience,' stands in need of a 'robust conscience' (*The Master Builder*, tr. E. Gosse and W. Archer, London, 1893, act ii.), while H. Sudermann, with more direct reference to social ethics as such, speaks derisively of the 'conscience of the race' (*The Joy of Living*, tr. E. Wharton, London, 1903, act iv.). Similar expressions of anti-social immoralism may be found in Anatole France, August Strindberg, and Bernard

Shaw. Thus, the status of the moral sense in contemporary thought seems to consist of a dogmatic assertion of the social on the part of science and a violent repudiation of the principle by culture.

MORAVIANS.—1. History.—The Moravian Church, or the Unitas Fratrum, belongs to the historic Churches of Christendom. For more than four and a half centuries it has never wavered in its claim to be a part of the Catholic Church, possessing the historic episcopate and the three orders of the ministry, administering the sacraments and preaching the Word according to apostolic precept, laying special emphasis on the importance of Christian unity, the cultivation of personal religion, and the necessity of personal service.

Whatever obscurity surrounds certain points in its history, there is nothing doubtful as to its origin. It dates from the year 1457; Bohemia was the land of its birth; and the more spiritually-minded followers of John Hus were its first members. Hus, the gifted rector of the University of Prague, an earnest reformer and eloquent preacher, owed much of his religious enlightenment to the writings of Wyclif, introduced into Bohemia by the wife of Richard II., a princess of that country. After his martyrdom at Constance in 1415 the greater part of his followers took up the sword in defence of their religious liberties. Some were pacified by concessions, such as their partaking of the cup as well as of the bread at the Holy Supper; but others, whose convictions went deeper, the Puritans of their day, withdrew from political life, retired to a remote corner of the country, and settled down in the Barony of Lititz. Here they formed themselves into a religious community on NT lines, in which many of the institutions of the early Christian Church were revived, under the leadership of duly elected elders. At the Synod of Lhota in 1467 they further proceeded to elect their own ministers, and for these they obtained ordination from the Waldenses (*q. v.*), whose bishop, Stephen, consecrated Michael Bradacius as the first bishop of the Unitas. The episcopate was given and received in the conviction of its apostolic origin, coming from the Eastern, not the Western, Church, transmitted possibly through the so-called sects, such as the Euchites, the Paulicians, the Cathari, etc. The validity of these orders was recognized even by the enemies of the Unitas; and, as the step thus taken involved complete ecclesiastical separation from Rome, it resulted in fierce persecution, despite which, however, the membership increased, the congregations multiplied, and the Church's influence spread far and wide, not merely in Bohemia, but beyond its borders also. The name adopted was *Jednota Bratrská*, the Latin rendering of which, 'Unitas Fratrum,' fails to give the exact meaning; 'Ecclesia Fratrum,' 'the Church of the Brotherhood,' would be more correct. The leaders in those early days were Peter of Chelcic, Gregory the patriarch, and Lucas of Prague—men of very different tempera-

ments, but of equal devotion. The Church's doctrines soon became distinctly evangelical; thus, at the Synod of Reichenau in 1495, the Brethren decided the great question, 'How shall a man be justified before God?' by the answer, 'Through the faith of our Lord Jesus Christ and the righteousness which is of God.' They laid special stress on Christian character and conduct; hence their strict discipline, which later excited the admiration of the Reformers. By the year 1500 they had over 200 congregations with more than 100,000 members; and in 1535 these figures had doubled themselves. It was the Brethren who issued the first hymn-book in the vernacular, in 1501; they set up some of the finest printing-presses in Europe, and used them largely for the production of their own translation of the Bible, which is still the standard Bohemian version of to-day. Their schools had a well-deserved reputation; Bohemia's best literature was the product of their scholars. Their church music became famous, especially for the congregational part-singing. Family worship was a feature of their homes; the children were early grounded in the Scriptures; the catechisms were clear, concise, and practical. The Church government was Presbyterian, with the Synod as the supreme court. Under its authority the bishops controlled their own dioceses, and they alone ordained; the presbyters preached and administered the sacraments; the deacons acted as assistants. Infant-baptism was practised, followed by confirmation.

As the Church expanded, it came to include three separate branches, in Bohemia, Moravia, and Poland; yet the three remained organically one, and thus the Unitas became the earliest International Protestant Church. Its history during the greater part of the 16th and 17th centuries is one long record of persecution, broken by intervals of rest and of official favour. It suffered terribly during the period of the Counter-Reformation, especially after the disastrous battle of the White Mountain in 1620. A veritable 'Book of Martyrs' might be compiled dealing with the days when Rome set itself to exterminate the Unitas. Its foremost leaders among the nobility were executed, its clergy imprisoned, its members sent to the mines or kept in dungeons; its churches were closed, its schools destroyed, its Bibles and hymn-books, catechisms and histories were burned. More than 36,000 families fled from Bohemia, and with them their sole surviving bishop, John Amos Comenius, the herald of humanistic and religious training for the young. He was at that time the leading educationist in Europe, and his writings still rank among the standard authorities. His wanderings took him to Poland and Holland; and he was also invited to England to re-organize the very defective system of education which prevailed in that country. Much sympathy for the Bohemian martyrs had already been aroused during the Commonwealth, when Cromwell offered the Unitas a home in Ireland; and this continued afterwards also, when collections on its behalf were made in many of the Anglican churches. In the belief that the days of the Unitas were numbered Comenius drew up a remarkable document in which he says:

'As in such cases it is customary to make a Will, we hereby bequeath to our enemies the things of which they can dispossess us; but to you our friends (of the Church of England) we bequeath our dear Mother, the Church of the Brethren. It may be God's will to revive her in our country or elsewhere. You ought to love her even in her death, because in her life she has given you an example of Faith and Patience for more than two centuries' (*Ratio Disciplina*, Amsterdam, 1660, Dedication).

He also secured the episcopal succession, apart from the Polish branch in which it still continued, by having his son-in-law, Peter Jablonsky, conse-

crated as bishop by Bishop Bythner at Milenezyn in Poland.

With the death of Comenius in 1672 the first part of the history of the Unitas ends. The second part opens at Herrnhut, in Saxony, where in 1722 a company of fugitives from the Moravian border valleys, in which isolated families of the ancient Church had still preserved the faith of their fathers, found a refuge on the estate of a young nobleman, Count Nicolas Ludwig von Zinzendorf. They were soon joined by others from Bohemia; and in association with a number of German Pietists they formed themselves into a society similar to those which then existed within the Lutheran Church. But this did not satisfy the descendants of the Unitas; they insisted that they were not Lutherans, they belonged to a much older Church; and, being now in the possession of a certain amount of religious liberty, they desired its re-establishment. To this Zinzendorf was at first opposed, till from a chance copy of the writings of Comenius he learned what the history of the Unitas had been, how glorious its past, how evangelical its doctrine, how strict its discipline, how firm its faith and steadfastness under suffering. Almost unconsciously he found himself being led on to devote his life, his means, and his talents to the re-organization of this venerable Church, and its equipment for further service. But the Renewed Church was not of Zinzendorf's creation. Its points of contact with the Unitas lie in the personal descent of many of its members, in the church regulations which were again introduced, and, above all, in the orders of the ministry, which in 1735 were restored, when David Nitschman was consecrated bishop by Bishop Daniel Ernst Jablonsky, whose father had received the succession from Bythner with the written commission of Comenius.

The little community at Herrnhut rapidly increased and developed in spite of the banishment of Zinzendorf by order of the Saxon Government, on the ground of his having introduced unauthorized religious novelties and of teaching false doctrine. Its fame spread far and wide, since in it a striking union of spiritual life with good works and industrial activity was to be seen. The danger of a narrow type of Pietism (*q.v.*) was averted by a wonderful experience of revival and a wave of evangelizing zeal, which visited the Church in 1727, under the impulse of which it embarked on that particular work in the doing of which lay the pledge of its continued existence. At the beginning of the 18th cent. foreign missions were almost entirely unknown among the Reformed Churches; it was left to the Moravians to inaugurate the modern missionary movement. This dates from the year 1732, when two of the Brethren set out to evangelize the enslaved Negroes in St. Thomas, willing to become slaves themselves if that should be the only way of winning them for Christ. In the same spirit others went to the Eskimos in Greenland; others settled in S. America, and carried the gospel for the first time to the natives in the Dutch Colony of Surinam. Work was also begun among the N. American Indians, to whom David Zeisberger devoted sixty-three strenuous years of life. In S. Africa these early missionaries were to be found teaching Hottentots and Kaffirs the faith of Jesus. They penetrated to Persia and Ceylon, they preached in Egypt and Algiers, they established their stations on the Gold Coast and in eight of the W. India Islands, they started a mission to the Jews—and all this as pioneers, and within a few years after the founding of that little Saxon village whose inhabitants numbered only some 600. They formed the first Protestant Church that recognized and attempted

to fulfil the duty of world evangelization; and in this effort they stood alone for sixty years. This early characteristic of the Renewed Church still remains its outstanding distinction; and that is why, alone among all others, it possesses no separate missionary society, since the whole Church is the society, and within it the principle prevails that 'to be a Moravian and to further missions are identical.'

From Herrnhut strong religious influences began to spread at home as well as abroad among the students in the German universities, the landowners in the Baltic provinces, the merchants of Amsterdam, and the military in Berlin. Zinzendorf and his Brethren were invited everywhere, and, as the result of their evangelistic work, societies or congregations, known as 'settlements,' sprang up in Denmark, Holland, Russia, and Switzerland, and in several of the German principalities. Each became, like Herrnhut, an industrial as well as a religious centre, for the apostolic rule of being 'diligent in business' as well as 'fervent in spirit' was insisted on. It was largely by means of these industrial undertakings, supplemented by the unstinted generosity of Zinzendorf, that the cost of the mission work was met—not to mention the fact that most of the missionaries provided for their own necessities.

The first official visit was paid to England in 1735; and here it was that Peter Böhler three years later met with John Wesley and became the means of his spiritual enlightenment. Here also the name 'Moravian' came into use; given originally as a convenient nickname (like 'Methodist'), it has now gained a kind of permanence, though it cannot be regarded as satisfactory, since it emphasizes only one point, and that a comparatively unimportant one, in the long history of the Unitas.

The Moravian influence was unquestionably one of the main factors in the early days of the Evangelical Revival; for a time it equalled that of the Methodists. Moravian evangelists preached throughout the length and breadth of the United Kingdom, leaving their mark especially in Yorkshire and the Midlands; and, through the preaching of John Cennick, to a yet greater degree in Ireland and the west of England.

In America also the Church took root in the middle of the 18th cent., around two centres, Bethlehem in Pennsylvania, and Salem in N. Carolina; and from each of these two places it spread rapidly. Thus the Church came to consist again of three distinct provinces, according to the different nationalities—German, English, and American. These form the home base, and, though widely separated, they are organically one. Each province is independent as regards the conduct of its own affairs, elects its own bishops, appoints its own administrative boards, and legislates for itself through its own synods. The main outward bond of union between the parts (and the seat of final authority) is the so-called General Synod, made up of delegates from all the provinces. This bond may seem a very slight one, yet through these many years the spirit of brotherhood in Christ has been strong enough to prevent any kind of schism in the body.

The death of Zinzendorf in 1760 had important results. It involved a severe financial strain which at one time threatened disaster and dissolution, but it also led to the framing of a distinctive system of church government, the settlement of its constitution, the definition of its doctrine, and the re-organization of its undertakings. The administrative centre still lay in Germany, where during the latter part of the 18th cent. the Moravians found themselves in the forefront of the controversy with rationalism; they became the recognized cham-

pions of orthodox Evangelicalism. Here also their influence was as far-reaching as in England, though in a different way. In this case it was due largely to the writings and the personality of Bishop August Gottlieb Spangenberg, originally a professor at Halle. It made itself felt in the universities; Schleiermacher learned his religion and gained his conception of the historic Christ at a Moravian college; and Kant, the philosopher of Königsberg, referred his students, when searching for peace, to 'the little Moravian church over the way; that,' he said, 'is the place in which to find peace.'

2. *Characteristics.*—(a) *Diaspora.*—A unique feature of the Church's work on the Continent was, and still is, the so-called Diaspora, an extensive agency for promoting spiritual life and fellowship within the National (Protestant) Churches. It is carried on in many parts of Germany, in Denmark, Norway, Sweden, Switzerland, and Russia; and, according to synodal resolution, no worker in it is allowed to seek converts for the Moravian Church from among the members of other communions. The effort is in the interests of the Kingdom of God as a whole, supplementary to the existing religious agencies, and is designed to strengthen and promote the unity of believers. This accounts to a great extent for the good-will shown to the Moravians by those who know the disinterested nature of their labours, and the catholicity of their spirit. Had there been more denominationalism, no doubt a larger numerical increase would have resulted, but it would have meant the loss of that kindness of mutual feeling which has marked the Church's relationship to other Christian communities.

(b) *Education.*—Another Moravian characteristic is the educational system, officially recognized and regarded as belonging to the Church's work and responsibility. Love of education, and enthusiasm for it, formed a part of the inheritance which had come down from the days of the Unitas. It was held that, just as the Church had its mission to the heathen, who had never heard the gospel, so had it also a mission to the young to ground and train them in its divine precepts. To carry this out was a priceless privilege ordained of God, to be undertaken with prayer, and to be done for Him. In this spirit numerous boarding-schools were opened in Germany, Holland, England, Switzerland, and America; many of them have become famous, not only on account of the education given, but also by reason of the pupils who have gone forth from them, men distinguished in almost every calling and rank of life. The standard was high; and, if in many cases the discipline was strict, it was always blended with the kindly influences of a distinctly Christian atmosphere.

(c) *Missionary zeal.*—The third, and the most characteristic, feature of Moravianism is its missionary zeal. Never since the beginning of the work in 1732 has this waned; the Church has sent forth its sons and daughters in an unbroken stream, in some cases through five generations of the same family. Most of its congregations have their representatives in the missions, and through these living links the bond of sympathy with the foreign field is maintained. The Church's energies flow largely along this channel, in support of what represents, and is felt to be, its God-appointed work in the present as much as in the past, a glory that has not faded. Hence the surprisingly large number of Moravian missionaries in proportion to the membership; and also the relatively high standard of financial support. Whilst in the Protestant Churches at large the proportion of missionaries to members is about 1 to 5000, among the Moravians it is 1 to 60. These are the words of J. R. Mott on the subject:

'If members of the Churches in Great Britain and America gave in like proportion [as the Moravians], then the Missionary contributions would aggregate over £12,000,000 per annum instead of some £3,000,000. And if they went out as Missionaries in corresponding numbers, we should have a force of nearly 400,000 foreign workers, which is vastly more than the number of Missionaries estimated as necessary to achieve the evangelisation of the World' (*Report of New York Ecumenical Missionary Conference, New York, 1900, i. 97*).

The work abroad has to a great extent been among primitive races, some of them now approaching extinction, in out-of-the-way parts, in lands that are peculiarly unpromising and uninviting, and that have been neglected by every one else. These have been taken up by the Moravians in accordance with Zinzendorf's early desire and determination, when, as a school-boy, he established among his companions the so-called 'Order of the Mustard Seed,' for the purpose of seeking the conversion of the heathen, having in mind 'especially such as others would not trouble themselves about.' Thus the Moravian Brethren were the pioneers in work among the lepers, first in the Cape Colony, where as early as 1818 a missionary and his wife cut themselves off from their fellow-Europeans, and settled down in a lonely valley among the poor outcasts, in order to care for their bodies as well as their souls. The result was remarkable, for within six years over 90 of the lepers were converted and baptized. Afterwards the work was continued on Robben Island, a sandy stretch lying off Cape Town; and still later a spacious hospital has been built outside the walls of Jerusalem, where the aim is to gather all the lepers of Palestine, and to alleviate the sufferings caused by this dread disease.

Continuous expansion has marked the missionary enterprise of the Church, till now it is to be found in every continent. The fields are as follows: Labrador, Alaska, California, the W. Indies (Jamaica, St. Thomas, St. John, St. Croix, Antigua, St. Kitts, Barbadoes, Tobago, Trinidad, San Domingo), the Mosquito Coast, Nicaragua, Demerara (British Guiana), Surinam (Dutch Guiana), S. Africa, East and West, Nyasa and Unyamwezi (in German E. Africa), W. Himalaya, and N. Queensland—14 different countries, 343 stations, with 1503 preaching places. The workers include 367 European and American missionaries, among them doctors, educationists, deaconesses, etc., 48 ordained native ministers, 459 native evangelists, 1663 native helpers; with a total of 107,379 souls in their care. The annual expense amounts to £114,000, exclusive of the Leper Home, which costs an additional £1500 per annum. Mission colleges exist in England, Germany, America, the W. Indies, and S. Africa; hospitals in Labrador, Jerusalem, Surinam, and Kashmir, where Zenana work is also carried on.

The above figures, if not large in themselves, are strikingly so when compared to the size of the home Church. This consists of the continental congregations, in Germany, Austria, Switzerland, France, Denmark, Russia, Sweden, and Norway; the British province (England, Scotland, Ireland, and Wales); and the American provinces, North and South. The last-named have 134 congregations; in Great Britain there are 45, and on the Continent 30—or 74, if the Diaspora centres are included. A joint undertaking of the whole Church, apart from the foreign enterprise, is the evangelization of the lands of its birth and early history, viz. Bohemia and Moravia. Work among the young is carried on in both day and boarding-schools; the home Sunday schools number 179, and have 23,000 scholars; abroad there are 189 schools, with 1430 teachers, and over 25,000 scholars. In England an agency known as the Rural Mission works on lines somewhat similar to the Diaspora on the Continent.

3. *Worship.*—The worship of the Church com-

bines the liturgical element with a large measure of freedom in extempore prayer—a blending of order and liberty. The British Book of Worship includes two liturgies for public service, an alternate form of prayer, a confession of faith, and formularies for the baptism of infants and of adults, for confirmation, ordination, marriage, and burial—and combined with these is a newly-revised collection of hymns of all ages. It is the latest successor of the first Protestant hymn-book ever issued. The Church's ritual is marked by simplicity and directness of purpose, due largely to a wise caution in the use of symbolism, and also to a dislike of whatever would serve to quench the spiritual impulse of the moment. A stately dignity marks the special services and the doxologies in use at the consecration of bishops and the ordination of ministers. The same applies in a measure to the confirmation service, which, as in the Greek Church, is not considered an exclusively episcopal function, but may be performed by a presbyter. At all these services the surplice is worn, as well as at the administration of the sacraments. The Apostles' Creed is in use as representing the oldest, simplest, and most generally accepted expression of the faith of Christendom; and in addition a special confession, based on that compiled by Luther and made up mainly of a connected sequence of Scripture passages, is recited on the great Church festivals, such as Easter, Whitsunday, etc. In it the Trinitarian belief of the Church finds marked emphasis—the Fatherhood of God, the Creator of all things and the Author of salvation; the redemptive and mediatorial work of the Son in His perfect humanity, the 'Lamb of God' once slain, now risen and glorified; the presence and power of the Holy Spirit, 'Who proceedeth from the Father, and Whom our Lord Jesus Christ sent after that He went away . . . that He should abide with us for ever.'

4. **Doctrine.**—The main points of doctrine as held and taught are defined in the Church Book under the following heads: the doctrine of the total depravity of human nature; the doctrine of the love of God the Father; the doctrine of the real Godhead and the real humanity of Jesus Christ; the doctrine of our reconciliation unto God and our justification through the sacrifice of the Cross; the doctrine of good works as the evidence of faith; the doctrine of the fellowship of believers; the doctrine of the Second Coming of the Lord; and the doctrine of the Headship of Christ over the Church, which is His Body. Thus in essence the theological position is that of the Nicene Creed, the XXXIX Articles, the Augsburg and the Westminster Confessions; but, since no one Creed can be said to be a complete statement of the whole range of Christian dogma, liberty is allowed for difference of view in non-essentials. The Holy Scriptures are regarded as the only rule of faith and conduct, the basis of all teaching, and the final court of appeal. More stress is laid on Christian life and character than on perfect agreement of opinion. Devotion to Christ, and personal union with Him, form the foundation of the Brotherhood. The Church has kept itself free from anything approaching sectarian peculiarities of doctrine, and this because it came out from Rome on the broad ground of gospel truth and liberty, and did not separate itself from any other Evangelical Church.

5. **Constitution and government.**—The constitution and government of the Church, which at one time was something of an oligarchy, is now essentially democratic, as may be seen from the fact that in the General Synod, which meets every six years and controls the funds and the work of the entire body, the elected members outnumber those who

have a seat in virtue of their office. The same applies to the provincial synods, and also to the authorities of the individual congregations. The principle at work in Church affairs is that of 'the government of the people, by the people, and for the people,' under the sole headship of Christ. The bishops have no administrative powers on account of their position, though, as a matter of fact, a bishop is almost invariably the president of the board of elders which directs the work of each province. These boards are elected by synod, the members holding office only during the inter-synodal period; they are responsible to the synod for their administrative doings. The foreign missions, as the concern of the whole Church, stand under the management of an international mission board, on which each of the home provinces, as well as the foreign field, is represented. This has at present its seat in Herrnhut, though it might just as well be located anywhere else. In addition there is a general directing board of the Unity, which has to see to the carrying out of the principles laid down by the General Synod in regard to constitution, doctrine, worship, orders, congregation rules, and discipline. It exercises also the functions of a court of appeal; it summons the General Synod, and acts as the standing representative of the Church in its entirety.

All appointments in the ministry are made by the directing boards of the respective provinces; each congregation is entitled to suggest names for the filling of a vacancy, and each minister has the right to accept or decline a call sent to him. The different provinces make their own arrangements for the training of their students, whilst in all the various colleges the standard is equally high. The normal course includes the work necessary for a University Degree in Arts, which each student is expected to gain; then follows a three years' study of theology. As a rule, some period is devoted to teaching in the boarding-schools. Later on comes ordination, in the first instance as a deacon when acting as assistant minister; and, on being appointed to a separate charge, a second ordination admits to the presbyterate. Thus the Church possesses and combines within itself many of the features which in other cases separate some of the larger religious bodies. Its orders are strictly episcopal, for only bishops can ordain, but its government is presbyterian. Its teaching is distinctly evangelical, though no formal subscription to any specific Creed is demanded, or expected, from ministers or members. The individual conscience is bound by no formularies; the bond of union lies not so much in a common Confession as in the exercise of mutual love as the supreme mark of discipleship. Infant-baptism and confirmation are practised; at the Holy Supper the wafer is generally used; the Church seasons are observed with very special stress on the services of Holy Week and Easter. In some of these observances there is a marked element of ritual, hallowed by the usage and tradition of past centuries; but at the same time the Church is as free from the bondage of form and ceremony as it is from all sacramentarianism.

The whole body, scattered over the world's surface, on the Continent, in Great Britain, in America, and in the 14 mission-fields, is still an organic Unity, each portion maintaining its own national characteristics, the Germans attached to their German ways, the English and Americans equally loyal to their own country's interests and customs. Jointly they form an international brotherhood, composed of men of many races and differing opinions, all banded together, not to propagate any special system of church government, or any kind of ritual, or any particular point of

doctrine, but to evidence and promote the oneness of believers in Christ, and to prove the possibility of a union, organic as well as spiritual, which rises above all barriers of nationality and opinion. The Moravian Church does not work in opposition to any other evangelical Church, nor does it seek to increase its membership by any system of proselytizing. Its aim is to gather into the fold of Christ those who are still outside, and then to further that growth in grace and that fruitfulness of service which are the divinely appointed means for the spread of the Kingdom of God among the children of men. It is above all else a missionary and a union Church.

MORBIDNESS.—The term 'morbidness' as applied to moral and religious states of mind is popular rather than scientific. It designates particularly any unduly depressed state connected with one's moral or religious status. Little effort has been made thus far to discover a scientific differentia for religious and moral disease or morbidness. One author,¹ essaying a moral pathology, treats largely of ordinary moral faults and classes as pathological even such habits as result from mistaken conceptions of the moral life. Here 'pathological' loses all definite meaning; as well might we class as morbid the misspelling of a word. On the other hand, neurologists and medical writers tend, on the whole, to limit moral and religious morbidness to certain phenomena of the insanities, such as the delusion that one is God or Jesus Christ, or that one has committed the unpardonable sin. While it is difficult to differentiate between sanity and insanity, a useful mark of the insane is that they are incapable, for the time being at least, of fulfilling their social functions. Thus, all the insanities are cases of moral inability and, in this sense, of moral morbidness.

There is, however, a broad expanse of moral morbidness that is neither insanity, on the one hand, nor, on the other, mere deflexion from a moral ideal through erroneous thinking or through the common instinctive impulsions. The best example is the moral distortions frequently found among adolescents. Under the stress of the neural and intellectual re-organization that is going on at this period of life, the following types of morbidness are not uncommon.

(1) Excessive or minute introspection of one's desires, motives, or choices, often with the application of excessively severe standards to one's self. In religious communions that emphasize such experiences as conversion, regeneration, and the witness of the Spirit, this introspection often consists in a search for signs of the divine presence or of divine operations within one's soul.

(2) Hypersensitiveness to moral and religious situations and distinctions. To be wrong at all is to be heinous; only perfection is really good—this is the attitude of mind. This is what is often

¹ A. E. Giles, *Moral Pathology*, London, 1895.

called 'morbid conscience.' The victim of it is likely to put absurd emphasis upon the exact performance of trifles that seem to be duties. Habitual self-condemnation or censoriousness towards others may also appear.

(3) A passion for certitude, and refusal to live by the ordinary, commonsense assumptions, probabilities, and 'rule o' thumb' devices of mature practicality. Sometimes a sense of uncertainty becomes almost an obsession. The victim feels uncertain, for instance, whether he has locked the door, although he knows, in the ordinary sense of 'knowledge,' that he has done so. So, also, he may feel that he ought or ought not to do a certain thing, although he understands, in a way, that his feeling is unreasonable.

(4) Feverish or self-annihilating devotion to a person, a cause, or an ideal. Here morbidness consists partly in emotional excess, partly in the egregious self-assertion upon which the supposed sublimity of self-obliviation depends.

(5) In the four types thus far named we behold a sort of psychical congestion and soreness. A fifth type displays the opposite—insensibility and failure to function in the presence of normal stimuli. Callousness towards the pains and pleasures of others and lack of a sense of obligation are its marks. In less extreme cases the callousness appears only in spots, as towards some one person, human interest, or kind of duty.

These adolescent twists illuminate the whole subject of moral and religious morbidness. For, if the five types be broadly interpreted, they will be found to cover all cases of such morbidness at whatever stage of life. Here we have over- and under-sensitiveness, excess of action and defect of it, excess and defect of introspection, over- and under-caution, and disproportion in thinking. This is not normal or healthy, yet it includes no insane delusions and no such failure of practical adjustment as puts one outside the pale of social toleration.

The causation of morbidness in the sense that now grows towards definiteness includes two factors: neural depression (or at least lack of vitality), and some incidental experience that starts an unfortunate mental habit. The fundamental facts with which we have to deal are excess, defect, and distortion of emotion. Not infrequently morbid persons cherish a conviction that their mental processes are rational rather than emotional even though observers easily discover the lack of emotional balance. Conduct, and what passes as reason, are alike determined by some congestion or soreness, or by abnormal callousness. These emotional tendencies are primary psychical signs of neural conditions. The depression may be a hereditary or temperamental trait, an incident of a disease, or the product of an internal irritant, of a drug, or of fatigue. The reason why morbidness occurs so frequently in adolescence is that the pubertal change and the consequent re-organization of habits put extraordinary demands upon the nervous system. To this cause must be added the peculiar loads in school life, economic life, and social life that our occidental customs impose upon youth. Finally, in many cases sexual perversions and difficulties connected with the firm establishment of a healthy sexual life increase the tendencies to depression. In mature life the same general principles apply. Morbidness may safely be assumed, in practically all cases, to spring partly out of nerve depression, which, in turn, may have many causes.

The last of the five adolescent types enumerated does not readily reveal its neural basis. Moral insensibility, indeed, may not seem to require any special neural basis. May it not be a matter of

mere habit? Habit might, perhaps, account for it in older persons, but, whenever a child or youth exhibits it, the presumption is that strength for a full social reaction is lacking. Let it be remembered that socialized conduct is an achievement that implies power to feel in particular ways, and to resist and organize impulses. In the games of children and youth 'foul play' is often simply the resort of individuals who have not sufficient muscular strength or mental power to hold their own while playing the game according to the rules. In social situations that present stimuli of normal strength a child of normal powers will react socially unless some positive counter training has preceded. Persistent unresponsiveness to social stimuli is strongly suggestive of constitutional weakness or of incidentally depressed vitality.

But the neural basis of morbid moral and religious states is not nearly the whole explanation of them. Neural depression is generic rather than specific; it puts consciousness into a minor key, but it does not of itself construct the melody. The particular reaction depends upon particular stimuli and upon incidental as well as permanent subjective conditions. The same neural background may be present in a person who worries about his soul's salvation and in one who worries about his health. Further, habit plays a leading rôle in the whole matter. A morbid reaction, once induced in a period of weakness, may become fixed as a habit, and so persist even after the original neural depression has been partly or wholly removed. The relation between moral and religious morbidness and neurasthenia is often close. In both we find a general background of neural depression and a foreground of habitual ideas and practices, often highly systematized and therefore regarded as rational.

A gloomy theology or moral theory rarely, if ever, produces settled morbidness in the absence of predisposing nervous weakness or depression. Healthy and nervously strong persons, if they accept such doctrines at all, usually hold them in a theoretical way for the most part, or yield to their terrors only now and then when attention is specially directed to them. There is truth in the popular observation that, if men really believed in the grim theology that some of them profess, they would 'go wild.' The fact that, even in circles in which such theologies are accepted, men pursue and enjoy the common values of life, such as family, home, property, and social recognition, is direct evidence that any settled emotional realization of the prevailing belief depends upon something more than a set of ideas. If, however, any individual in such a circle has a tendency to nervous weakness, religious instruction may easily become the decisive factor in producing morbidness of a serious kind. In the aggregate the spiritual havoc thus wrought is undoubtedly large, although the cases of it are scattered. It is most unfortunate that among those who are susceptible to such injury are many persons whose sensitiveness and fineness of organization adapt them for high tasks. It is sometimes, no doubt, the possible prophet, poet, reformer, or thinker whose energies are fruitlessly introverted by depressing instruction.

LITERATURE.—G. Vorbrödt, 'Zur Religionspsychologie, Prinzipien und Pathologie,' *Theologische Studien*, Jena, 1906, pp. 287-308, argues against the view that religion as such is a morbid phenomenon. Josiah Moses, *Pathological Aspects of Religions*, Worcester, Mass., 1906, gives an extended analysis of religious extremes of various sorts. E. D. Starbuck, *The Psychology of Religion*, London, 1899, shows that conversion is, in general, a normal rather than abnormal phenomenon, chiefly of adolescence (ch. xiii.), but he presents numerous cases of adolescent doubt, brooding, depression, and introspection (ch. xvii.). G. A. Coe, *The Spiritual Life*, New York, 1900, also discusses adolescent difficulties, particularly doubts and morbid conscience. As already indicated, A. E. Giles, *Moral Pathology*, London, 1895, is not significant for our topic. A popular

discussion of depressive states of the neurasthenic type will be found in E. Worcester and others, *Religion and Medicine*, New York, 1908. See also J. Bresler, *Religionshygiene* (pamphlet), Halle, 1907. GEORGE A. COE.

MORDVINS.—I. Introduction and sources.—

The Mordvins form a branch of the Finno-Ugrian race (cf. vol. vi. p. 22^b), and consist of two tribes called respectively the Erza and the Moksha. Our knowledge of their ancient religion, coming, as it does, almost exclusively from a time when, in name at least, they had been converted to Christianity by the Russians, and when they could practise the rites of their earlier faith only in secret, is very scanty and defective. After the Mordvin people, as a whole, in consequence of the victory by which the Russians finally overthrew the Tatar khanate of Kazan (1552), had come under the sway of the conquerors, measures of a more or less violent nature were taken here and there to convert them, and were continued in the 17th century. It was not, however, till about 1740-50 that they came to submit *en masse* to the rite of Christian baptism, and the following decades witnessed the disappearance of the last vestiges of their heathenism. Yet for a long time their conversion was, in the main, a merely nominal change, and, accordingly, even in quite recent times the exploration of remote districts has yielded much valuable material for the elucidation of their ancient religion.

Our earliest information on the subject comes from an Italian traveller, G. Barbaro, who visited the district now called Eastern Russia in 1446, and who gives a short account of how the victim was dealt with in the horse-sacrifice of the Moksha tribe. The notes on the religion and sacrificial practices of the Mordvins made by N. Witsen, a Dutchman, at the close of the 17th cent. are altogether negligible; nor can we gather much of value from the accounts of P. J. Strahlenberg, K. Müller, I. Lepechin, J. G. Georgi, and P. S. Pallas, in the 18th century. A more useful source (in spite of errors due to misapprehension) is the Russian MS written by a land-surveyor named Miljkovič in 1783, and several times printed (most recently in *Tambovskaja Eparchialnyja Vedomosti*, no. 18, Petrograd, 1905, p. 815 ff.). From the middle of the 19th cent. we find in Russian newspapers and periodicals (especially those of the provinces), as in other publications, sporadic notices and descriptions of local conditions. Accounts of a more general character have been given by Melnikov, Mainov, and Smirnov (cf. Literature at end). Melnikov (writing c. 1850) draws his material mainly from MS sources; but, as regards the ideas of the gods, deals with his data too freely, and adds imaginative embellishments. The same may be said of Mainov, who, some thirty years later, devoted himself to the investigation of Mordvin ethnography, and even travelled over the Mordvin district; in many points he merely follows Melnikov. A much more valuable production is that of Smirnov, who carefully utilizes the available literature as well as a number of MS sources, and also draws upon his own observations. The following account is based not only on the published sources, but also upon collections made by the present writer among the Mordvins themselves, and the fairly abundant MS material subsequently forwarded by native Mordvins to the Finno-Ugrian Society in Helsingfors; it likewise draws upon some (in part very valuable) MSS dating from the middle of the 19th cent. and now in the keeping of the Imperial Geographical Society, or else deposited in the Asiatic Museum of the Imperial Academy of Sciences, Petrograd. The latter group of MSS had been already used in part, though very unscientifically, by Melnikov and Mainov.

2. The dead.—Life after death was regarded as a direct continuation of earthly life. The departed in their graves live and occupy themselves in much the same way as they did upon earth—hence the articles required by them were placed beside their bodies in the grave. In death as in life kith and kin are still together, so that the graveyard is the counterpart of the village; there is no realm of the dead in a universal sense. From the graveyard the human-like shades come forth to visit the living. Each family worships its own dead, the foremost and mightiest of whom is the first who was buried in the particular graveyard, i.e. the progenitor of the family (together with his wife), who was often still spoken of by his own name and was honoured with the title of 'ruler of the graveyard' (*kalmov' kindi*). The prevailing idea seems to be that this progenitor should not belong to too remote a past; thus among certain Erzä Mordvins in the government of Saratov, who migrated thither some 200 or 250 years ago, the earliest ancestors to whom worship is accorded are positively stated to have been the first settlers—the memory, and thus also the worship, of the earlier generations having faded away. Festivals in honour of departed individuals are celebrated during the first year after death—one immediately after burial, and others at specified times, as, e.g., six weeks, or the fortieth day, after death, from which time onwards the shade of the dead becomes more closely attached to the corpse in the grave, while prior to that time it lingers chiefly in its former home or, it may be, in places which the living person had been accustomed to visit. At this festival the previously deceased members of the family are believed to be in attendance, and are implored to take the newly departed into their midst.

General festivals for all departed ancestors (*pokštät babat*, or *atä babat*, 'grandfathers and grandmothers' [=ancestors]), again, are celebrated at least twice a year, in spring and autumn (latterly the dates of both the individual and the general festivals were for the most part brought into accordance with those of the commemorative celebrations appointed by the Russian Church). The ancestors are invited in due form to a feast in the village, the several houses of the family-group being taken in rotation for this banquet of the living with the dead. According to a tradition from the beginning of the 17th cent., joint festivals for the dead were in an earlier period held by larger family-groups or clans also at intervals of some fifty years. Formerly, animal-sacrifices were offered at the celebrations, and the ceremonies connected with them contain features that seem to point to a still earlier practice of human sacrifice. The living approach the ancestors with prayers and gifts in all circumstances in which, as they think, they require the help of these ancestors either for their own benefit (particularly in cases of illness, which may be sent by the ancestors themselves, if angered) or in order to injure others. Moreover, at the sacrificial feasts which are held by the community in honour of the (nature-) gods, the ancestors are in some districts conjoined with these as objects of worship, being invoked in the prayers immediately after the deities, and besought for the same earthly blessings—success in tillage and cattle-rearing, good fortune, and health. The dead, when thus present by invitation, are welcome guests, from whose benignity all good things may be expected—though at the close of the festival, it is true, they are driven away, sometimes with threats—but, when they appear on their own initiative, they are greatly feared, especially as causing disease. Peculiar terrors are excited by the dead who perish by accident—e.g., by drown-

ing—or who for other reasons have not received proper burial, as also by those who die without surviving kindred; such unfortunates are, accordingly, attended to only in the festivals for their own ancestors.

In connexion with the ceremonial of this ancestor-worship, special mention must be made of the fact that at the festivals for deceased individuals, according to some older accounts, a wooden image or a doll representing the dead was set on the bench by the festal table; subsequently this was replaced by articles of clothing belonging to him. At these festivals, however, the departed has also a living representative, a person of the same sex and of about the same age, who acts his part, and is treated by those present as if he were the deceased. He presents himself in the clothes of the dead, and frequently is conducted from the graveyard, and then, at the end of the feast, taken back to it. According to some accounts, he never speaks at all, but partakes heartily of the banquet, and receives the tokens of respect accorded by those present. Other accounts inform us, however, that he carries on an active conversation with them: he tells them of the life of the under world, and of those who have gone there before him; he gives them good counsel, admonishing them to live in unity, to abstain from theft and excessive drinking, to look well after their cattle, and the like; he blesses man and beast, settles disputes regarding inheritance, etc.

According to some authorities, the dead, during their existence in the grave, undergo a second experience of death, passing thereby 'into a higher state,' in which they no longer maintain direct relations with those living upon the earth, but have intercourse only with those who have died once, and through the latter alone influence the fortunes of the living.

Although the ancestors are worshipped and invoked like the gods, and to some extent conjointly with them, the two classes are, nevertheless, rigidly distinguished from each other. Still, there seem to be cases where the people have quite forgotten the human origin of a dead person whom they worship, and he is invoked as a 'god' (*pas*). Among the Erzä in the governments of Kazan and Samara we find a deity called *Staka pas*, 'the heavy god,' who is honoured with special sacrificial festivals, and is entreated not to launch 'his heaviness' (i.e. evil generally) upon the people. In some parts a divine pair bearing various proper names—e.g., *Onto* and *Bonto* (who are popularly supposed to be husband and wife)—are invoked by the epithet of *Staka pas*, while elsewhere the 'heavy god' is addressed in the sacrificial prayers also as *Kan pas*, *Kuvan pas*, and regarded as living 'in the black earth.' The word *kan*, the signification of which is now unknown to the people at large, is simply the Tatar *kan*, 'prince,' so that *kan pas* means 'the god-prince'; *kuvan*, again, is in all likelihood traceable to the Turkish princely title *kagan* in its Chuvash or Bulgar phonetic form *kogan* or *kugan* (with *o* or *u* instead of the common-Turk. *a*), which, though it has not come down to us, would correspond perfectly to the Mordvin *kuvan*. As the Mordvins, in part at least, were at one time among the subject peoples of the Volga Bulgars, the ancestors of the Chuvashes of to-day, we may be permitted to conjecture that the 'heavy god' was originally the spirit of a high Turkish ruler; similarly, the other heavy gods, such as *Onto*, etc., perhaps represent native princes of a bygone age.

With the Mordvin cult of the dead is probably connected in some way also the worship of the deity or spirit called *Keremet* (Erzä) or *Kerämät*, *Kerämäd* (Moksha), a name of Chuvash origin (in

the Chuvash tongue of to-day, *Kiramat*, originally an Arab. word). Among the Mordvins this deity bears the title *soltan*, *saltta*, which is obviously the same as the Arabo-Turkish *sultān*. What is told of him among the Mordvins is meagre and inconsistent. Among the Moksha, according to an early account, he was a deity of great prestige and power, and superior to all others in his influence upon everyday life—in no sense a malign spirit, like Keremet among the Cheremisses. Although he bears a name of foreign origin, and was regarded by the Moksha as 'born and bred with the earth'—a fact which shows that the people had no idea of his human origin—it would seem, nevertheless, that his worship contains certain elements of a former native hero-cult. In the legal proceedings of the community oaths are taken in the name of Kerāmāt, and it is believed that he punishes those who are guilty of crime.

3. Nature.—(a) *Air and sky*.—In the Erzá tribe the deity of the sky is called Vere-pas, i.e. 'the god who is above.' We also find mention of Ški-pas and Niške-pas or Niške, the latter of whom, while now identified by some of the Erzá with Vere-pas, was originally in all likelihood a distinct god (probably of foreign origin). In a number of ancient MSS the name Niške occurs in the form Ineske, whence it appears that the name is really a synthesis of *ine*, 'great,' and the first element in the divine name Ški-pas just mentioned. *Ški*, again, is a participle of an obsolete verb *ška-*, meaning 'bear,' 'procreate,' so that Ški-pas signifies literally 'the generative god,' 'procreator-god,' and Niške, 'the great procreator.' The sky-god of the Moksha is called Skaj—a name corresponding exactly to the Erzá Ški—or, with the addition of the term for 'god,' which among the Moksha is still found in the more primitive disyllabic form *pavas*, Škabavas (also Škabas and Skajbas), which accordingly corresponds in form with the Erzá Ški-pas. In the prayers he receives the designation Varda, 'he who is above,' or Ot's'u, 'the great one' (see above, the explanation of the Erzá name Niške). The Erzá Niške or Niške-pas has a consort named Niške-ava, 'Mother Niške,' who is worshipped at any rate by women in their homes (she is now often identified with the Virgin Mary, the Theotokos); he has also two daughters, Kastargo and Vezorgo, while in the songs we likewise hear of a son. Among the Moksha the wife of the sky-god is, so far as is known, mentioned, along with a daughter, only in a single song, where she is called Škabas-ava, 'Mother Škabas.' Strahlenberg states that the highest deity of the 'Mordvins' (by which term he obviously means the Erzá tribe) is Jumiship; in the first portion of his name, *jumi*, we have perhaps a cognate form of the Cheremiss term *Jumo*, applied to both the sky-god and the sky, and of the stem in the Finnish *jumala*, 'god,' while the second element is either equivalent to Ši-pas, 'sun-god,' or, more probably, an incorrect form of Ški-pas (see above).

Among the Mordvins generally the sky-god ranks as supreme among the gods, and to him must frequently be offered the first sacrifice and prayer. It may be noted, however, that, according to a report from the middle of the 19th cent., the Moksha, or at least part of them, did not offer sacrifice to Skaj at all, but simply, at the beginning of every sacrificial festival, addressed him with a brief prayer for protection.

A special deity of thunder, who is worshipped in the communal sacrificial feasts, is found among the Erzá. He is named Pur'gine (lit. 'thunder'), or Pur'gine-pas ('the god Thunder,' 'thunder-god'), and the worshippers beseech him to send a beneficial rain, but not the noisome hail; his figure has been strongly influenced by that of the prophet

Elijah in popular Russian belief. Among the Moksha thunder is called *at'am*, a derivative of *at'a*, 'grandfather,' 'old man,' and this, together with the fact that the rainbow is termed *at'am-jonks* (*jonks* = 'bow,' 'cross-bow'), seems to indicate that the Moksha also personified thunder, though the imperfect sources certainly say nothing of a thunder-cult among them.

In the prayers and elsewhere the sun as well as the moon is designated a god (*pas*, *pavas*), viz. Tši-pas (Erzá), Ši-bavas (Moksha), 'the god sun,' 'sun-god,' and Kov-bas, Kov-bavas, 'the god moon,' 'moon-god.' Special oblations are accorded to the sun at the sacrificial feasts. The worship of the moon seems to involve no more than that, when a person first describes the new moon, he bows before it with a prayer for good health, and promises it a whole (i.e. uncut) loaf. The morning and the evening glow are invoked, with Russian proper names attached to the terms, almost exclusively in magic formulæ—e.g. as 'morning-glow Mariya,' 'evening-glow Dariya'—and were probably derived, along with the formulæ themselves, from the Russians, resembling in this the spirits of midday and midnight, and others of similar character, which are likewise designated by Russian proper names in the magic formulæ.

Among the deities of the sky should perhaps be included a goddess styled Azër-ava, 'mistress,' who, in addition to Kerāmāt, was once highly revered among the Moksha, at least in some districts. She was said to dwell 'in the high place, in the upper parts of the atmosphere,' and bore the epithets 'rain-bringer' and 'corn-better'; she seems, however, to have been rather closely related in some way to Kerāmāt, as in the local law-courts oaths were taken in her name and in his (see above). Here, too, may be mentioned an obscure goddess named Ange-pate or Ange-pate pas (*pate*, more correctly *pat'a*, means 'elder sister'), who is said in one MS to have been worshipped among the so-called Teryuchans (Russianized Erzá in the government of Nijni Novgorod), but is otherwise unknown.

The name Ujsud or Ujvės'id—a word of obscure origin—is used among the Moksha to denote a host of spirits who move about in the upper atmosphere amid harmonious sounds (mingled, indeed, with inharmonious) and to whom girls make offerings of their hair. Should one who catches a glimpse of these spirits at once implore them to send him good fortune, he obtains his wish, though at times their gift may be death. With this host may be compared the celestial spirit known among the Chuvashes as Kėvak Xuppi, 'the gate of heaven'—the personification of some luminous appearance: 'when the gate of heaven opens, one obtains what one asks for.'

In some districts the Mordvins worshipped the wind, mostly under the name of Varma-ava, 'mother wind,' 'wind-mother,' both privately and at the communal sacrifices; and in her divine capacity she was specially implored not to damage the corn and hay crops. Worship, with offerings of food, was accorded also to frost, usually as Moroz-at'a or Kelme-at'a, 'old man frost,' but only within the house; the ceremonial of this cult is manifestly of Russian origin, as is probably also the spirit itself.

(b) *Earth, field, and grain*.—Mastor-ava, 'mother earth,' 'earth-mother,' especially among the Erzá, appears as one of the most revered of deities, being often named, indeed, immediately after the sky-god; thus in the songs we often find the set phrase, 'First he bowed before the sky-god, and then before mother earth.' At the communal sacrifices the Erzá besought her to give them a good harvest and to bestow good health upon the

tillers of the field. She seems sometimes to have borne the epithet Mastor-pas, 'god earth,' 'earth-god,' although elsewhere Mastor-pas appears as a distinct (male) deity, whom people invoked in their imprecations to bring their enemies to destruction. The Moksha, too, had their Mastër-ava, 'mother earth,' but in their official worship her place is taken by Paks'-ava, 'mother field,' 'field-mother,' or Paks'-azërava, 'field-mistress,' 'field-hostess,' or, again, Noru-paks'a, 'corn-field.' Among the Erzä there is little mention of the spirit of the tilled field; here, along with 'mother earth,' we find the place of that spirit usually taken by Norov-ava, 'mother corn,' 'corn-mother,' also designated Norov-pas, 'the god (goddess) corn,' to whom, among the Moksha, corresponds S'or-ava (or sometimes Noru-ava), 'mother corn'; S'or-ava, however, is found mainly in the magic formulae and the songs. Each tilled field had its own particular spirits. For the meadow likewise there was a special presiding spirit, called Nar-azërava, 'mead-mistress,' or the like; but, as far as we know, she was not the object of a distinct cult, or, at most, she was presented before the hay harvest with a few pieces of bread, accompanied by a prayer for her protection.

(c) *Forest and tree.*—The forest-spirit—each forest has one of its own—is usually designated Vir-ava, 'mother forest,' 'forest-mother,' and is now generally an evil-disposed being, whose characteristics (with the exception of her sex and her large breasts) have been borrowed in detail from Ljesyj, the evil forest-spirit of the Russians (on the Ljesyj see *ERE* iv. 628); she is not worshipped. According to our older records, however, the forest-mother, who among the Moksha is also known as Vir-azërava, 'forest-hostess,' 'forest-mistress,' was a friendly deity, to whom hunters and those who gathered fruits, berries, or mushrooms prayed for protection against wild beasts, serpents, and ill-luck of all kinds, and for success in their efforts, presenting her at the same time with small oblations of food, drink, and money. Among the Moksha similar petitions are addressed also to Virë-pavas, 'the god forest.' While, according to the extant sources, the forest-spirits were not worshipped at the communal sacrifices, it seems likely from certain reports that such worship was paid to particular trees—oak, lime, birch, pine—which were entreated to grant prosperity to crops and cattle; we read, e.g., of Tumo-pas, 'the god oak,' 'oak-god,' to whom were addressed prayers for rain. In the spells there is frequent mention of Čuvto-ava, 'tree-mother,' who, as in the case of many other spirits, was asked to pardon some supposed injury unwittingly done to her—e.g., by a push—and who punished the offender by afflicting him with disease.

(d) *Water.*—The water-deity common to all the Mordvins is Ved-ava, Vedmastor-ava, 'mother water,' 'water-mother,' known among the Moksha also as Ved-azërava, 'water-hostess,' 'water-mistress.' She holds an important position in the cultus, principally as the spirit who presides over the fecundity of the earth, of women, and of cattle—though, at least latterly, less as the sender of fish, probably on account of the small importance of fishing as an industry. Each distinct body of water—river, brook, lake, fountain, well—has its special presiding spirit, who may bear a more definite name—e.g., Rav-ava, 'mother Volga,' 'Volga-mother,' As-ava, 'mother fountain,' etc. In the songs we find mention also of a 'sea-mother' (Mor'ava), probably of Russian origin; with her should perhaps be identified the Ot's'aved-azërava, 'sea-mistress' (ot's'u-ved, lit. 'great water,' also 'sea'), of an older Moksha account, although our informant interprets her name as Ot's'u ved'-

azërava, 'the great water-mistress,' i.e. as denoting a universal supreme water-goddess, 'the ruler of all local waters.' In an Erzä sacrificial prayer we find Veden'-kan, 'khan or prince of water,' or Ved-kan, 'water-prince' (the sense of the word *kan*, which is of Tatar origin, is not known to the people generally); mention is made also of Lis'man' girde pas, 'the god who presides over the well.' A special water-spirit is Ved-eräj, 'water-dweller,' or Vetsa-eräj, 'he who inhabits the water'; there are, in fact, many such spirits; they are malignant beings, who, like vampire spirits, lie in wait for newly-born children, devour the grain that has been cursed by an enemy, etc. So far as we know, they are not worshipped. It is probable that these water-spirits, our information regarding whom is very meagre, were originally the souls of persons who had been drowned.

(e) *Fire.*—Among the nature-spirits should also be included Tol-ava, 'fire-mother,' 'mother fire,' who is often named in magic formulae and in songs, but of whose public worship we know virtually nothing.

4. *House, court-yard, etc.; the village.*—The spirit of the dwelling-house bears various names. Among the Moksha it appears as Kud-azërava or Kudzi-azërava, 'house-mistress,' 'house-hostess,' and also as Kud-ava, 'house-mother,' and Kudzi-pavas, 'house-god,' 'the god house'; while among the Erzä we find Kudon'-tšin' pas, 'god of the house' (*tši, ši* or *ži* being the analogue of *kudo, kud*, 'house'), or Keren' šotskon' pas, 'god of the lime-bark and the beams,' 'lime-bark and beam-god,' sometimes (perhaps through a misunderstanding and corruption of the original name) Ker'an' šotskon' pas, 'the god of the hewn beam, or beams,' and in some districts also Kudo-jurtava, 'house-mother' (lit. 'dwelling-place-mother of the house').¹

The dwelling-place as a whole, i.e. the court-yard, the dwelling-house, and its adjoining buildings, which the Mordvins designate by the name *jurt*, a word borrowed from the Tatar language, has a special spirit of its own, the Jurt-ava, 'dwelling-place-mother,' known among the Moksha also as Jurt-azërava, 'dwelling-place-mistress.' This spirit, especially among the Erzä, has in many cases dispossessed the above-mentioned household-spirit in the proper sense, and taken its place; in this capacity it is also called Kudo-jurtava (see above) by way of distinguishing it from Kardas-jurtava, 'dwelling-place-mother of the yard,' and is represented as a dwarfish female being, or as a cat-like creature, which lives under the stove, being thus obviously connected with the Russian domestic spirit Domovoj (on which see *ERE* iv. 628 f.), which likewise lives near the stove, and has the form of a dwarf or a cat. Common to all the Erzä is a special spirit of the court-yard named Kardas-s'arko, 'court-s'arko' (a word of obscure meaning in this connexion), who

¹ More particularly in the magic formulae we find a vast number of domestic spirits, quasi-personifications of various parts of and articles in the living-room, and generally described as 'mothers,' 'mistresses' or 'rulers'—e.g., Patnakud-azërava (Moksha), 'stove-mistress,' Uštuman' kirdi (Erzä), 'ruler of the stove,' Kenkš-ava, 'door-mother,' etc. Among the Moksha Kužgërës, and among the Erzä T'r'amo, is a benevolent domestic spirit of dwarfish human form, who, however, is not worshipped. He brings to his master whatever of other people's property the latter may desire, but a task must be set for him every night, else he will begin to carry his master's goods to others. Those who wish to obtain such a spirit must keep an egg of a hen or a cock (!) from seven to twelve weeks in the armpit, remaining meanwhile under the floor; it is then hatched out. It is also possible to kill this spirit. The name T'r'amo seems to be derived from the verb *t'r'ä*, 'to nourish,' while Kužgërës is probably a compound formed of *kuž*, 'serpent,' and *gërës*, 'owl,' and thus originally meant 'serpent-owl'—though the Mordvins no longer think of it as having such a form. With this we may compare the fact that, e.g., among the Lithuanians the analogous spirit, the *Kaukas* (on which cf. *ERE* iii. 696), is represented now as an owl and now as a fiery dragon; cf. also the myth of the *basilisk*.

lives beneath a stone situated in the court,¹ and is generally represented as a male, though sometimes as a female. Among some of the Moksha we hear of a court-spirit named Koram-ot's unä, 'the chief of the court,' while others speak of a special spirit called Kaldas-ava, 'cattleyard-mother.'

To these house- and court-spirits sacrifices are offered by the individual family at stated seasons, and also on special occasions—the birth of a child, the birth of a cow's first calf, etc. At the legal tribunals held by the head of the household with his family, according to an early Moksha account, it was the practice to swear by the house- and the dwelling-place-spirits as well as by deceased ancestors. As protectors of the cattle we also find, sometimes even at the communal sacrifices, certain saints of the Russian Church—e.g., Frolavrol (a distortion of two saints' names, Flor and Lavr), surnamed Alašan'-pas, 'horse-god,' Nastasija (Russ. Anastasia), with the epithet Reven'-pas, 'sleep-god(dess)'; Miljkovič mentions also a 'swine-god' (Tuon'-pas), etc. Moreover, the store-pit, the bathroom, the threshing-place, etc., had each its special presiding spirit, usually designated 'mother,' or (among the Moksha) 'mistress,' 'hostess,' as, e.g., Ban'-ava, 'bathroom-mother,' or Ban'-azërava, 'bathroom-mistress,' and on certain definite occasions offerings of food and drink were presented to these spirits. Likewise the bee-garden, sometimes forming part of the house-garden, sometimes situated in the forest, had its particular spirit: Neškepër-ava (Moksha), 'bee-garden-mother,' Neske-pas (Erza), 'beehive-god,' etc. Mention is made even of an alley- or lane-god (Uit's'a-pas). The village, too, had its spirit, named Vel-ava, 'village-mother,' or Vel-azërava, 'village-mistress,' or Velen'-pas, 'god or goddess of the village'; this spirit was worshipped at the communal sacrifices.

5. Evil spirits.—To this class belong the spirits called *šaj'tan* ('Satan'; pl. *šaj'tat*), who dwell in marshes and waters (especially in deep parts), but also on dry land, in caverns. They beget children; they appear in various forms, including that of a fish. In the Mordvin spells they are found also as servants of the wicked earth-god Mastor-pas (see above, p. 845*). The Erza believe in a distinct spirit of curses, 'the ruler of the curse,' called Ert, 'curse,' Ert-pas, 'curse-god,' 'the god curse' (also Erks), and is anthropomorphically figured as having a wife and a large family. Another evil spirit is *Avés*, or *Jäves* (Moksha), *Eves*, *Evs* (Erza), called also *Idem-eves* (*idem*, 'fierce'), etc. According to a Moksha account, this spirit and his wife produce seventy-seven children every year; every year, however, the whole family is killed by thunder except two, who in the following year beget other seventy-seven, and so on. The Erza seem to regard this spirit as a wicked sorcerer, who flies in the air as a meteor. Numerous diseases are personified, and addressed as 'mother'; some of these disease-spirits, too, are thought of as married people, while others take the form of chickens, etc.

6. General observations on Mordvin mythology.—Among the Mordvins the personification of the deities (nature-spirits) is of a very feeble character, especially in the cultus—a fact signally attested by linguistic usage, and more particularly by that of the sacrificial prayers. Thus the 'rising and setting sun-god (god sun)' and 'the moon-god (god moon)' who moves in a circle are simply the sun and the moon in their visible form, but regarded as animate; in the sacrificial prayers there is nothing that would point to their personification, and, while in the mythology the sun is depicted as a maiden and the moon as a man, this is probably due to foreign influence. Nor can the designation 'mother'

(*ava*), which—with the epithet *kirdi*, 'ruler' (fem.), e.g., Mastoron' Kirdi Mastor-ava, 'earth-mother, the ruler of the earth'—is the general term of most frequent occurrence in the names of the deities, be regarded as implying the attribution of personality to any particular deity; these 'mothers,' in fact, are, especially in the sacrificial prayers, only the amorphous and indistinct 'souls' of natural objects, etc. Thus men 'dig' the earth-mother, and 'sow corn in her'; the field-mother—in place of whom the 'tilled field' is sometimes invoked—may 'be crushed by the horse's foot,' and 'carried away to another person's field'; the corn-mother, it is true, appears in a popular lyric as singing songs in the festive attire of a Mordvin woman, but this personification is not long maintained, for in her song the corn-mother speaks of herself thus: 'I was sown in the morning twilight, reaped in the evening twilight, thrown into the granary in order to be brewed into small beer at Easter, and baked into pastries at Christmas'; the water-mother 'streams,' or 'wells forth like silver'; the fire-mother 'blazes,' and so on. So, too, with the household-spirit, we can still to some extent distinctly trace the original idea that it is the animate dwelling-house itself, or, in other words, the amorphous soul of the house. Thus we find it said in a Moksha magic prayer, 'Kud-azërava ('house-mistress'), pardon him who built you and heats you'; in an Erza petition of similar character we read, 'Kudo-jurtava ('house-mother'), above is thy lime-bark [the roof is thatched with this], beneath are thy beams'; while a parting utterance of a girl who has just been married runs, 'Dear house [=soul of the house], I have sojourned much in thy warm house.'

In conjunction with the spirits designated 'mothers' (*avat*) and 'mistresses' or 'hostesses' (*azër-avat*) are found the correlative (male) 'old ones' (*at'at*) and 'lords' or 'hosts' (*azërht*)—e.g., Ved-at'a, 'water old one,' Ved-azër, 'water-lord,' Kud-at'a, 'house old one,' Kud-azër, 'house-lord.' They are for the most part absent from the sacrificial prayers, belonging rather to the sphere of the magic formulæ and of folklore, where such married couples are even represented as having children. Here we have obviously a later development, perhaps not unconnected with ancestor-worship, in which male and female progenitors are generally named together as married pairs. It is only in the case of the god of the sky and the god of thunder that personification has reached a more advanced stage. These two deities are always represented as human-like figures, and it is mainly with them that the few myths current among the Mordvins have to do. Thus, the thunder-god appears in the songs as the son-in-law of the sky-god Niške, while the latter, again, finds a wife for his son (of whom otherwise nothing has come down to us) in a Mordvin maiden whom he bears up to the sky in a silver cradle upon a chain. This myth-making process, which perhaps was to some extent due to foreign influence, does not, however, appear in the worship—the sacrificial prayers—at all, while among the Moksha the name of the sky-god, the form of which certainly suggests personification (*škaž*, 'procreator'; see above, p. 844*), is also used as the designation of the natural sky—e.g., in the phrase *škažs' mazems'*, 'the sky reddens.' The older conception of nature as animate merely, but not personal, still tends to maintain its ground, and to impede the process of personification.

Virtually no limits were set to the practice of ascribing life to inanimate things. In the magic formulæ we find that, e.g., plants, the claw of an otter, the handle of a pan, a distaff, a laundry beetle (the last three are invoked by the magician

¹ The blood of sacrificial animals is allowed to run into the cavity under this stone.

¹ Cf. the Mordvin name for the pupil of the eye: *š'elme-ava*, lit. 'eye-mother.'

as his 'elder sisters'), are all endowed with life, and their aid is sought to expel disease.

It is manifest that, in the course of centuries, the religion and worship of the Mordvins have been affected by foreign (Aryan, Lithuanian, Turkish) influence, as is shown, for one thing, by a number of mythological terms—e.g., *pavas, pas*, 'god' (cf. O. Ind. *bhagas*, O. Pers. *baga*), *Pur'gine*, the thunder-[god] (cf. Lith. *perkūnas*), *Keramāt* (=Chuyash *Kiramāt*), *Sajt'an*, an evil spirit (cf. Tatar *Sajtan*, Chuvash *Sujttan*); in later times they have also been greatly influenced by Russian popular beliefs, especially in ancestor-worship.

7. **Worship.**—Besides the oblations performed at home by the individual family, usually under the direction of the head of the household or his wife, and accorded mainly to the domestic spirits and to ancestors, every village community held its own sacrificial feasts, in which the participants frequently arranged themselves in groups corresponding to their families or clans. From certain reports and indications, however, it would seem that at an earlier time there were joint sacrificial festivals for larger districts. The places at which sacrifices were paid to *Kerāmāt* appear to have been fenced in. On at least some of the sacrificial sites stood a simple building without windows, which, like the ordinary dwelling-house, was called *kudo*, and was used for religious purposes. The deities were not represented in material forms—the obscure indications of such likenesses found in Russian sources probably refer to representations of the dead. The offerings comprised all kinds of edible animals, from horses to fowls, while, as has already been said, allusions to an earlier practice of human sacrifice are not wholly absent from the tradition. Parts of the sacrificial animal—especially, but not exclusively, the inner parts—were presented to the deities, and in the sacrifices in honour of the dead the idea that the soul of the victim is to serve the dead person in his under-world life is brought out quite distinctly. There are indications that the colour of the animal sacrificed corresponded with that of the natural phenomenon or the object worshipped, so that the earth-spirit received a black animal, and so on. The ceremonial of the sacrifices to the nature-deities sometimes included magical actions (analogous magic), while the form of the prayer used occasionally recalls that of a magic formula—e.g., 'Sky-god, may the corn prosper!' The ceremonies have, on the other hand, been noticeably influenced by the cult of the dead; thus, in the sacrificial feast, the sky-god, like the dead in the mortuary feast, had a human representative, who in his stead responded to the person praying.

The notices regarding the sacrificial priests show great divergences. According to some accounts, there were priests and priestesses—designated respectively *in-at'a*, 'great old man,' and *im-baba*, 'great old woman,' among the *Moksha*—who held a life appointment, and who did duty also at marriages and in the legal proceedings of the community, while other reports indicate that they were selected for definite periods of longer or shorter duration. In addition to the designations just given, we find the following: *at'a*, 'old man,' *voz-at'a*, meaning something like 'sacrificing old man,' *oznit's'a*, 'he who sacrifices or prays,' *ozni-baba*, 'the old woman who sacrifices or prays,' and *pokš-baba*, 'great old woman.' In some of the sacrificial feasts both sexes took part, but there were also distinct festivals for males and females respectively. The public worship of the deities was connected in the closest way with agriculture, the principal employment of the people, and also with the related industry of cattle-rearing, and the deities were specially besought to grant success

in these. In the cult of the nature-deities there is no trace whatever of an ethical element, prayers being addressed to them for earthly boons alone; but that element, as already indicated, does not seem to have been wholly absent from the cult of the dead, or from the worship of *Kerāmāt* (and the obscure *Ažer-ava*), and the spirits of the house and the homestead.

8. **Magic.**—From the sacrificial priest should be distinguished the sorcerer and sorceress, although there is certainly a suggestion that the priests were selected from the family or caste of the sorcerers. The latter are now usually designated by a term borrowed from the Russian, viz. *orožija, vorožija* (Russ. *vorozheja*), but we find also a genuine native term, *sodit's'a, sodaj*, 'he (she) who knows.' These sorcerers prophesy; they discover lost things; they find out the causes of disease and all misfortune with the aid of forty-one (or forty) beans or other objects like beans, or by gazing into water freshly drawn from a well in the early morning, or by looking into the face of the person afflicted; they cure diseases by magic spells and magic prayers conjoined with the appropriate offerings, and among these prayers there is a specially large number in which a spirit (e.g., the earth-mother) is solicited to pardon a presumptive injury unwittingly done to him by a fall, a push, etc., and punished by a visitation of disease or other calamity. Other kinds of disease (disease-spirits) are driven out by threats and by magic practices, special magic formulae serve to protect against the evil eye, and so on. Magic might, of course, be employed also to cause injury.

The magic formulae and associated practices of the Mordvins show, on the whole, strong evidence of Russian influence, or, to speak more accurately, have for the most part been borrowed from the Russian people.

LITERATURE.—Besides the writings cited in § 1, cf. P. Melnikov, 'Očerki Mordvy,' in *Russkij Věstnik*, v. xxi. [1867]; W. Mainov, 'Les Restes de la mythologie mordvine' (= *Journal de la société finno-ougrienne*, v.), Helsingfors, 1889; I. N. Smurov, 'Mordva. Istoriko-etnografickij očerok,' in *Izvestiya Obščestva Arheologii, Istorii i Etnografii pri Imper. Kazanskom Universitate*, x–xii. (also separately, Kazan, 1885); contains abundant references to further literature. Fr. tr. P. Boyer, *Les Populations finnoises des bassins de la Volga et de la Kama*, Paris, 1898, pt. ii.; H. MOTHER.—See CHILDREN, FAMILY, MOTHER-RIGHT.

MOTHER OF THE GODS (Greek and Roman).—The Mother of the Gods was identified by Homer (*Il.* xv. 187) and Hesiod (*Theog.* 634) with Rhea, the wife of Cronos. She was famous in legend for having prevented Cronos from swallowing Zeus by providing him instead with a large stone which she had wrapped in swaddling-clothes (*Hes. Theog.* 485 ff.; Apollod. i. 5). The story was localized in Crete, which thus became the fabulous birth-place of Zeus. There is some evidence of an old-established cult of the Mother of the Gods at various places on the mainland, although the name Rhea scarcely appears in this connexion. Thus,

there was an altar of the Mother of the Gods in the agora at Athens (*Æschin.* i. 60), and a sanctuary (*μῆτρῶν* [Paus. i. iii. 5]), which was used as a record office (*Lycurg.* 66). An ancient festival, known as *Galaxia*, on the occasion of which a barley cake was boiled in milk, was celebrated in her honour (*I. Bekker, Anecd. Græca*, Berlin, 1814-21, p. 229. 5). The ætiological legend which ascribes the foundation of the sanctuary to the expiation required for the murder of a Phrygian *μητρὶστῆρας* (schol. *Aristoph. Plut.* 431; *Phot. Lex.* p. 268. 7) shows clear traces of the later conviction that the worship of the Great Mother had been imported from Asia Minor. The same influence¹ may be present when Pindar speaks of a sanctuary of the Mother close to his own gale, where she was worshipped in conjunction with Pan (*Pyth.* iii. 77 ff. [137 ff.]), and the scholiast, who does not hesitate to identify her with Rhea, relates that Pindar himself set up her statue near his house in consequence of a stone image of the Mother of the Gods having fallen from the sky at his feet. Pausanias (*VIII.* xxx. 4) records the existence of a ruined temple of the Mother of the Gods at Megalopolis in Arcadia, and of another, which was roofless, close to the sources of the Eurotas and the Alps, and of two lions made of stone in its immediate neighbourhood (*ib.* xlv. 3). But the oldest of her temples in the Peloponnese, containing a stone image of the goddess herself, was at Acriæ in Laconia (*ib.* III. xxii. 4).² Yet another temple was at Corinth (*ib.* II. iv. 7) with a stone throne, and a stone image of the goddess.

From the 5th cent. at least Rhea came to be identified with the Phrygian Great Mother (*Eur. Bacch.* 58 ff., 127 ff.), whose influence in Greek religion was henceforth increasingly important. Already in the Homeric prelude (*Hymn.* xiv.) the Mother of the Gods is addressed as rejoicing in the clash of cymbals, the beating of drums, the blare of pipes, and the roar of wolves and lions. In another passage (*Soph. Phil.* 391 ff.), where the name of Rhea is not mentioned, she is clearly referred to as the mother of Zeus, and is identified with the Phrygian Mountain-Mother, the mistress of the swift-slaughtering lions. She is there also addressed as 'all-fostering Earth,' and there are other passages in which the earth-goddess is described as Mother of the Gods (*Hym. Hom.* xxx. 17; *Solon*, frag. 36. 2; *Soph.* frag. 268)—a title which she might well have claimed as mother and wife of Uranus according to the Hesiodic theogony (117 ff.). But it is impossible to explain the worship of the Mother of the Gods as merely a development from the vague conception of a motherly earth. The identification of the Mother of the Gods by certain 5th cent. poets (*Eur. Hel.* 1301 ff.; *Melanippides*, frag. 10 [T. Bergk, *Poetæ Lyrici Græci*, Leipzig, 1878-82, iii. 592]; *Pind. Isthm.* vii. 4) with Demeter, who, according to the received genealogy, was a daughter of Rhea (*Hes. Theog.* 454), is a further cause of perplexity. The existence of a Metroum at Agræ (*PHG* i. 359; *J. G. Frazer, Pausanias*, London, 1898, li. 204), where the lesser mysteries were celebrated in honour of Demeter, may assist those who maintain that the Athenian Mother was another form of Demeter *Γεωργοπόρος* (*L. Preller and C. Robert, Griech. Mythologie*, i. 4, Berlin, 1887, p. 651). Lastly, we must take into account the antiquity of the cult of the Mountain-Mother in Crete, which has been abundantly established by the archaeological discoveries

of recent years. Most significant in this connexion is the impression of a signet-ring found at Cnossos, which represents the goddess standing on the apex of a mountain and guarded on either side by a lion (see art. MOUNTAIN-MOTHER).

To disentangle the actual course of development from these extremely complicated facts is one of the most puzzling tasks within the sphere of Greek mythology. The leading consideration is that, though the name of Rhea was often associated with Cybele, the identity of the two goddesses was never so completely merged that the Rhea of the Greek theogonies did not remain distinct from the partner of Attis (*Gruppe, Griech. Mythologie*, p. 1521). Some modern investigators hold the opinion that the fusion did not take place until the period subsequent to the Persian Wars (*J. Beloch, Griech. Geschichte*, Strassburg, 1893-1904, ii. 53). Others, while maintaining that the cult of the Mother belonged to the oldest stratum of Greek religious thought, believe that her legend and ritual passed from Crete to the Greek settlements in Asia Minor, where she was completely assimilated to Cybele in the 7th cent. or earlier (*Gruppe*, p. 1526 f.). Beyond this lies the question whether the goddesses subsequently identified were in origin entirely distinct (*Wilamowitz, in Hermes*, xiv. [1879] 195), or whether the Phrygian Cybele and the Cretan Rhea both developed in their separate manifestations from an identical substratum of belief belonging to the pre-Hellenic and pre-Phrygian inhabitants of Crete and Asia Minor (*P. Kretschmer, Einleitung in die Gesch. der griech. Sprache*, Göttingen, 1896, p. 194 f.). Modern theory inclines to go further (*A. Rapp, in Roscher*, ii. 1660), and to distinguish from Rhea a Greek Mother of the Gods, whose relation to the Phrygian Mother is to be explained by the fact that she belonged to a period anterior to the separation of Greeks and Phrygians. It is argued that, though the evidence of the cult of Rhea is scanty, its existence as distinct from that of the Mother of the Gods is well attested in Arcadia (*Paus.* VIII. xxxvi. 2), at Olympia (schol. *Pind. Ol.* v. 10), and at Athens (*Paus.* I. xviii. 7). To this it has been replied (*CGS* iii. 296) that the double title justified the establishment of distinct sanctuaries, and that it was quite possible for Greek travellers who found in Crete the worship of a great maternal goddess of fertility, bearing the name of Rhea, to transfer her cult to the mainland, using sometimes her original name, and sometimes the title *μητρὶς θεῶν*, in reference to their own god Zeus, whom they affiliated to her. From this point of view it becomes significant that the cult of the Mother prevailed especially in districts which are known to have been affected by Cretan influences. Instances of such coincidence are the appearance of the Idæan Dactyls at Olympia (*Paus.* v. vii. 6) and the legendary connexion of Athens with Crete. Moreover, the result of recent Cretan discoveries enables us to gauge better the extent of the influence which Cretan civilization must have exercised in pre-historic times. On the other hand, although Cybele did not appear in myth as the Mother of the Gods, the supposition that she was originally distinct from Rhea, and that some accidental resemblance led to their coalescence, seems to be refuted by the remarkable agreement of the traditions relating to the two goddesses. Thus, the birth of Zeus in a cave on Mt. Ida in Crete corresponds to the worship of Cybele in the hollows of Trojan Ida (*Eur. Or.* 1449; *Lucr.* ii. 611 ff.); the stone which Rhea offered to Cronos to the sacred stone of Cybele at Pessinus (*Livy*, xxix. 11); the noisy rites of the Cretan Curetes to those of the Phrygian Corybantes (*Lucian, de Salt.* 8); and the Idæan Dactyls, the attendants of Rhea,

¹ Pindar (frag. 80) is the earliest writer who is known to have given the name Cybele to the Mother of the Gods (cf. *Aristoph. Av.* 875 f.).

² The reference of Pausanias to Mt. Sipylus indicates the permanence of the belief that the *μητρὶς θεῶν* was identical with the goddess worshipped in Asia Minor. There is a curious reference to the cult of an anonymous Mother-goddess in *Alexis*, frag. 207, li. 396 K.

were located both in Phrygia and in Crete (Soph. frag. 337).

Since it appears to be established that there was a primitive cult in Crete and Asia Minor, and to a lesser degree in Greece proper, devoted to the celebration of the Mother of the Gods, or Great Mother, but, on the other hand, the specifically Oriental features attending the ritual of Cybele were regarded as essentially foreign to Greek sentiment and were introduced to the mainland at a comparatively late period, it must be inferred that the character of the Asiatic cult had been largely modified by barbarian, especially Semitic, influences. The native Hellenic conception of the Mother is best illustrated by an Attic relief (now at Berlin) dated about 400 B.C. and in the form of a *vatikos*, where the beautiful and benign figure of the goddess is represented enthroned and holding the tympanum, with lions couching at her feet (reproduced by Rapp, p. 1663, and by Farnell [*CGS* iii. pl. xxxiv.]).

The general characteristics of Cybele-worship have been described elsewhere (see artt. ATTIS, CYBELE), and consequently we may limit ourselves to the impression which it made upon Greek civilization at various epochs. Attis was a youth beloved by Cybele, and the story of their relations is parallel to that of Aphrodite and Adonis. According to the various narratives, none of which is earlier than the Hellenistic age, Attis was either a hunter who, like Adonis, was killed by a boar (Hermesianax, *ap.* Paus. vii. xvii. 9), or a hind (Theocr. xx. 40) that mutilated himself under a pine-tree and died from loss of blood (Ov. *Fast.* iv. 223 ff.). At the festival held in his honour a mimic representation of his death, burial, and resurrection took place, in which a pine-log was substituted for the corpse (*GB*² ii. 130 ff.).

The story, which attests the identification of Cybele with her Semitic counterpart Ishtar or Astarte (Lucian, *de Dea Syria*, 15), must have been current in Asia Minor from a very early date; for clear traces of Attis are recognizable in Herodotus's narrative of the death of Atys, the son of Croesus, at a boar-hunt (Herod. i. 34 ff.), and the herdsman Anchises, the favourite of Aphrodite, is obviously a double of the herdsman Attis. Theopompus, the comic poet, whose plays belong to the end of the 5th and the beginning of the 4th cent., refers to the association of Attis with Cybele (frag. 27, i. 740 K.), and it is probable that the name is to be recognized in the cry *ἡς ἄττης* mentioned by Demosthenes (xviii. 260) in his famous account of the vulgar initiation-rites—doubtless of Asiatic origin—in which Aeschines took part as an acolyte. In classical times these barbaric cults became familiar to the common people as a congeries of superstitious practices (C. A. Lobeck, *Aglaophamus*, Königsberg, 1829, i. 116; Lucian, *Icarom.* 27, etc.), so that the worship of Attis and the Mother was apt to become confused with the observances proper to Dionysus (Strabo, p. 470), Sabazius (Aristoph. *Av.* 875), and Artemis (Diog. frag. 1 [A. Nauck, *Tragicorum Graecorum Fragmenta*³, Leipzig, 1889, p. 776]). With Artemis in particular Cybele was associated as the protectress of lions, bears, panthers, and other wild beasts; and with Hecate, who was identified with Artemis at an early date, she shared the title *Antea* (schol. Apoll. Rhod. i. 1141; Hesych. s.v.) as the sender of nocturnal apparitions (Gruppe, p. 1539).

The worship of the Mother was distinguished from the indigenous Greek cults chiefly by its emotional, ecstatic, and mystical character. Indeed Phintys the Pythagorean pronounced that participation in the rites of the Mother was inconsistent with the requirements of womanly modesty (Stob. *Floril.* lxxiv. 61). In the Corybantic initia-

tion-rites the novice was placed on a chair (*θρόνος*), while the celebrants danced round him, accompanied by the wild notes of soul-stirring music (Plat. *Euthyd.* 277 D, *Legg.* 790 D). Although, in consequence of the syncretism already explained, the mysteries of Cybele are sometimes associated with the Eleusinian mysteries of Demeter, the symbolic words of initiation, as recorded by two of our authorities (Clem. Alex. *Protrept.* i. ii. 13, p. 14 P.; schol. Plat. *Gorg.* 497 C), are undoubtedly derived from the Phrygian worship of the Great Mother: 'I have eaten from the timbrel, I have drunk from the cymbal, I have borne the sacred vessel, I have entered into the bridal chamber' (J. E. Harrison, *Prolegomena to the Study of Greek Religion*, Cambridge, 1903, p. 158). The last phrase relates to the mystical communion between the goddess and her lover, which was ritually enacted all over the East, whether in connexion with the names of Cybele and Attis, of Aphrodite and Adonis, or of Isis and Osiris (*GB*² iii. 159 ff.).¹ It was common to each of these legends that the lover was put to death and afterwards restored to life, if not always in the same incarnation. The mystical marriage may have been in its origin a magical process intended to stimulate the reproductive forces of nature, while the subsequent death and resurrection of the priest-king represented the annual decay and revival of vegetation.² The self-mutilation of Attis, which is, of course, the transference into myth of a primeval custom of priestly emasculation, though at first sight not easy to reconcile with the other data, probably belonged to the same circle of ideas. Whether we should regard the act in its primary intention as the final oblation by means of which the votary seeks to assimilate himself to the essential nature of the goddess (E. Meyer, *Gesch. des Altertums*³, Stuttgart, 1907-09, i. ii. 649), or whether it was intended to secure the continued fruitfulness of the Earth-mother and the renewal of her crops (*GB*², pt. iv., *Adonis, Attis, Osiris*, London, 1907, p. 224 ff.; Cumont, in Pauly-Wissowa, vii. 681), is not altogether certain, and the two ideas are not necessarily inconsistent with each other. Considerations bearing on the question may be deduced from the fact that the severed genitals were dedicated in the sanctuary of Rhea-Cybele (schol. Nicand. *Alex.* 8), and from the statement of Lucian that they were thrown into some particular house from which the Gallus received female raiment and ornaments (*de Dea Syria*, 51). Anyhow, it is unnecessary to suppose that the custom was introduced into the cult owing to a fresh impulse of mysticism which, moving from East to West, perhaps in the 6th cent., aimed at the liberation of the worshipper from the indulgence of sensual desires (Gruppe, p. 1542). Certainly asceticism was by no means characteristic of the begging priests of the Mother (*μνηταγιδραι*),³ who earned their living by vulgar quackeries imposed upon the superstitious masses, and who, although they are first known to us from the fragments of the poets of the New Comedy (*Μνηταγιδραις*, a play of Antiphanes, ii. 74 K.; cf. Menand. frag. 202, iii. 53 K.), were probably familiar figures in Athens at a much earlier date (R. C. Jebb, on Soph. *CEd. Tyr.* 388 [*Tragedies*, Cambridge, 1904]; cf. Plat. *Rep.* 364 C). It may be conjectured with some probability that the influence of this traffic was considerable, although

¹ Gruppe, p. 1541, points out that the names *θαλάμαι*, *καλύβει*, and *ναοὶ* given to sanctuaries of Cybele (schol. Nicand. *Alex.* 8; Hesych. s.v. *Κύβηλα*; *Anth. Pal.* ix. 340. 4) are to be interpreted in the same way.

² The notion that Cybele and Attis stand for the generative principle and its terrestrial process survives in the Neo-Platonic treatise of Iamblichus *περί θεῶν* (v. : tr. G. Murray, *Four Stages of Greek Religion*, New York, 1912, p. 191 ff.).

³ Some of these may have been eunuchs (Babrius, cxxxvii. 1).

the conception of the frenzied Galli who scourged themselves with whips (Plut. *adv. Colot.* 33, p. 1127 C), and lacerated their flesh with knives (*Anth. Pal.* vi. 94 5), cannot be traced to an earlier source than the Alexandrian writers (Cumont, *op. cit.*, col. 675), and has become known to us chiefly through Latin literature (e.g., Sen. *Agam.* 723; Lucr. ii. 614 ff.).

In the year 205 B.C. a Sibylline oracle was discovered by the Decemviri, directing them, as a condition of success in the war, to introduce into Rome the worship of the Great Mother of Pessinus (Livy, xxix. 10). Accordingly, the sacred stone, which was then in the custody of Aitalus, king of Pergamus, having been removed by him from its original home at Pessinus (L. Bloch, in *Philol.* lii. [1895] 580 ff.), was brought to Italy in circumstances of great ceremony, and reached its destination in the year 204. Strange happenings marked its arrival. The ship conveying the sacred object grounded on a sandbank in the Tiber. Then Claudia Quinta, a noble matron whose freedom of speech had provoked censorious tongues to slander, prayed to the goddess that her character might be cleared by the ordeal, if she succeeded in drawing off the ship after strong arms had failed. The ship at once began to follow her direction, and Claudia's innocence was triumphantly vindicated (Ov. *Fast.* iv. 291 ff.; Suet. *Tib.* 2; Tac. *Ann.* iv. 64). On the 4th of April the goddess was received as a temporary guest, until a permanent home could be provided for her, in the temple of Victory on the Palatine, and the day was set apart for a festival to be known as the Megalesia, on which gifts were presented to the shrine, and a *lectisternium* and public games were held (Livy, xxix. 14). Ten years later scenic performances were for the first time exhibited at the Megalesia (*ib.* xxxiv. 54). Subsequently, thirteen years after the contract had been placed, a temple on the Palatine for her sole and separate occupation was dedicated to the Magna Mater Idæa on the 10th of April 191, when the *Ludi Megalenses* were included for the first time in the State calendar (*ib.* xxxvi. 36). Somewhat later, if not immediately, they were extended so as to occupy the entire interval between the 4th and 10th of April (*CIL* i.² 314). On the first day of the festival the *prætor urbanus* made a solemn offering to the goddess in her temple (Dion. Hal. *Ant. Rom.* ii. 19). The third day was reserved for the performance of stage-plays (Ov. *Fast.* iv. 877), and we know that four of the extant works of Terence were presented on this occasion. Races (*circenses*) were held on the last day (Marquardt, *Röm. Staatsverwaltung*¹, iii. 501), and in the age of Nero and Domitian these had become by far the most popular feature of the whole celebration (Juv. xi. 193). The recurrence of the festival was marked by general merrymaking and licence; clubs were formed to promote social enjoyment (Cic. *de Senect.* 45); and so lavish was the expenditure of the upper classes on reciprocal hospitalities that in 161 a sumptuary law was found necessary to restrain it (Aul. Gell. ii. 24).

In the last two centuries of the Republic the participation of State officials in the cult was limited to the extent already described; but, dating from the time of Augustus, who restored the temple of the Magna Mater after it had been burned down in A.D. 3, there is evidence of a further ceremony of a primitive character which took place on the 27th of March. This was known as the *lavatio*, when the symbolic stone and possibly also the knife of the Gallus (Mart. iii. xlvii. 2) were conveyed, by the direction of the Quindecimviri, through the Porta Capena, and washed in the waters of the Almo, which debouches into the Tiber

just outside the city (Ov. *Fast.* iv. 337; Lucan, i. 599). In all other respects the administration of the cult was left in the hands of its foreign ministers, particularly the Galli with their Archigallus (*CIL* vi. 2183), and no Roman citizen was allowed to acquire any official status in relation to it. The Phrygian priests, however, were permitted on stated occasions to march in procession through the city in their sacerdotal dress, singing their wild songs to the accompaniment of flutes and tympana (Dion. Hal. *loc. cit.*), and collecting alms from the bystanders (Cic. *de Leg.* ii. 22).

In the latter part of the 2nd cent. a complete re-organization of the cult seems to have taken place. Henceforth, as the evidence of numerous inscriptions shows, Roman citizens were permitted to assume priestly offices subject to the approval of the Quindecimviri, but the privilege was exercised chiefly by the freedman class. To the ceremony of the *lavatio* on March 27th there was now added a further festival of five days, the opening ceremony of which on March 15th was denoted *Canna intrat* on the Calendar of Philocalus (*CIL* i.² 264), while the remaining four days, the 22nd, 24th, 25th, and 26th of March, were designated respectively *Arbor intrat*, *Sanguen*, *Hilaria*, and *Requiesio*. The ceremonial represented in detail the various incidents of the story of Attis with which we are already familiar. On the 22nd the procession of reed-bearers (Cannophori) which entered the city was intended to recall the fact that Attis as a child was exposed among the bulrushes of the river Gallus (Julian, *Or.* v. 165 B). Similarly on March 22nd the Dendrophori carried to the temple on the Palatine a pine-tree, encircled with fillets of wool and adorned with violets, as a representation of the tree under which Attis mutilated himself. The day of blood (24th) was given up to lamentation for the death of the god, and, whereas originally the act of self-mutilation was then performed by the priest, subsequently it was sufficient for the Archigallus to make an incision in his arm and symbolically to sprinkle his blood (Tert. *Apol.* 25). The climax of the festival was reached in the rejoicings over the resurrection of the god which occupied the day of the *Hilaria*. It was recognized in antiquity that the renewal of the sun's power after the vernal equinox was hereby symbolized (Macrob. *Sat.* i. xxi. 10), and that the whole festival was devised to celebrate the decay and re-birth of vegetation (cf. Plut. *de Is. et Osir.* 69 [378 F]). Modern scholars have noticed the parallel presented by our Lenten and Easter services, which occupy a corresponding position in the calendar (*CGS* iii. 301).

It remains to mention the rite known as *taurobolium*, performed on 28th March, the existence of which is attested by a series of inscriptions extending from the 2nd to the end of the 4th century. Although during this period it was invariably linked to the service of the Great Mother, there is no doubt that it belonged originally to the cult of some other deity, and it has been conjectured that this was the Persian goddess Anāhita, who had been identified with Ἀρτεμις Ταυροπόλος (F. Cumont, *Rev. archéol.* xii. [1888] 132 ff.). There is also much obscurity in the details of the rite. In the earlier period the chief incident of the *taurobolium* and of the certainly similar *criobolium* was the sacrifice of a bull or a ram; but at a later date, according to both the epigraphic (e.g., *CIL* vi. 511) and the literary (Prudent. *Peristeph.* x. 1011 ff.) records, the recipient of the *taurobolium* stood in a cavity having a perforated roof through which the blood of the bull was poured over him so that he might suffer a 're-birth.' The whole ceremony was under the control of the Quindecimviri.

In the Roman Imperial period the cult of the

Great Mother, by passing under State control, lost many of its original characteristics; but the power of the Roman organization was such that, by the adoption of suitable accretions from outside, and by its association with the cults of Isis and Mithra, it exercised during the last days of paganism a wider and more potent influence than at any earlier time.

A. C. PEARSON.

MOTHER-RIGHT.—I. Introduction.—

Mother-right is a form of social organization in which the rights of a person in relation to other members of his community and to the community as a whole are determined by relationship traced through the mother. In this condition the duties which a person owes to society, the privileges which he enjoys, and the restrictions to which he is subject are regulated, and their scope is determined, by the relations in which the person stands to his mother's relatives and his mother's social group.

Mother-right is a highly complex condition in which a large number of social processes are involved. The following are the chief elements that can be distinguished.

(1) *Descent*.—This term should be limited to the process which regulates membership of the social group, such as clan, caste, family, etc. In mother-right descent is matrilineal; a person belongs to the social group of his mother. The use of the term is most appropriate when the community is divided into distinct social groups, and this distinctness is most pronounced in the clan-organization in which the practice of exogamy separates the social groups called clans clearly from one another. The social organizations based on the family or kindred are made up of social groups less clearly distinguishable from one another, and, though we may speak of descent in the family whether in the limited or extended sense, the term is here less appropriate.

(2) *Kinship*.—In a community based purely on mother-right kinship would be traced solely through the mother and would not be recognized with the relatives of the father. Everywhere in the world, but especially among peoples who possess the clan-organization, kinship carries with it a large mass of social duties, privileges, and restrictions (*ERE* vii. 705), and in a typical condition of mother-right these social functions would exist only in connexion with the mother's relatives. We have no evidence, however, of the existence of any society in which kinship is not recognized with the relatives of the father, although in many cases the functions are very restricted as compared with those of relationship traced through the mother, good examples being those in which marriage is allowed with any of the father's relatives, but is strictly forbidden with equally near relatives on the mother's side.

(3) *Inheritance*.—In a condition of typical mother-right children would inherit nothing from the father; their rights to property would be determined solely by relationships through the mother. Mother-right does not imply that rights in property should be vested either mainly or exclusively in women. On the contrary, in many cases in which children inherit nothing from the

father, women are debarred from holding property, though they form the channel by which it is transmitted from one member of the community to another. The usual rule of inheritance in mother-right is that the property of a man passes to his brother or his sister's son. Often it passes from brother to brother, and, on the death of the last surviving brother, to a sister's son.

(4) *Succession*.—This term is most conveniently used for the process whereby rank, office, or other social distinction is transmitted. In mother-right succession usually follows the same rules as inheritance, a chief, priest, or other holder of rank or office being succeeded either by his brother or by his sister's child.

(5) *Authority*.—Mother-right has often been supposed to imply mother-rule, but in the great majority of the societies which furnish us with examples of mother-right authority is definitely vested in the male—in the father or oldest male as the head of the household, and in the chief as the head of the tribe or corresponding social group. In some societies, however, authority in the household is vested in the mother's brother, giving rise to a form of social organization which has been called the 'avunculate,' and the authority of the mother's brother in one form or another is very common, not only associated with other features of mother-right, but in societies in which descent, inheritance, and succession are patrilineal. Only very rarely is authority in the household vested in the mother or oldest female. The term 'matriarchate,' which is often used loosely as the equivalent of mother-right, should be limited in its scope to this condition of mother-rule. Many societies exist in which women are chiefs or monarchs, but, as a rule, this condition is not associated with mother-right. Among peoples over whom women rule the father is usually the head of the household.

(6) *Marriage*.—Mother-right in its typical form is associated with a mode of marriage, most suitably called 'matrilocal,' in which the husband lives with his wife's people. In its extreme form the husband may be only an occasional visitor to his wife's home, so that the children grow up with little or no social obligation towards their father, and live under the authority of the mother and the mother's brother.

In a state of typical mother-right a person would belong to his mother's social group. He would not recognize the existence of any kind of social duty except towards his mother's relatives, and would ignore the relatives of his father; property, rank, and office would pass solely through women. It is not a necessary feature of mother-right, however, that authority should be vested in the woman. It might be so vested, but, if the woman is not the ruler, it would be vested in her brothers. In mother-right in its most typical form the father should have no authority in the household.

The condition thus described as typical mother-right occurs very rarely, being found most purely among such people as the Iroquois and Seri Indians of N. America and the Khasis of Assam. In many cases which have been regarded as examples of mother-right some of the social processes included under this head depend on the tie with the mother, while others are determined by relationship traced through the father, producing social conditions of the most varied kinds. Thus, while descent is matrilineal, succession may be patrilineal. Kinship is everywhere, so far as we know, recognized through the father as well as through the mother, and authority in the household is often paternal where descent, inheritance, and succession are all matrilineal. Moreover, a mixture of social groupings may be present, one of which may be patrilineal while the other is matrilineal, this being

especially the case when local organizations accompany different forms of exogamous grouping.

There are cases in which matrilineal processes show themselves only in certain departments of social life. Thus, a people who possess patrilineal institutions in general may yet show the presence of matrilineal practices in connexion with slavery. The children of a free father and a slave mother may be slaves even if the father is of high rank, while the children of a free mother and a slave father may be free, and even noble, if the mother belongs to the nobility.

Another condition in accordance with mother-right is that in which marriage between half-brother and sister is allowed when they are the offspring of one father and different mothers, while it is forbidden when they are of the same mother by different fathers. The form of marriage which is forbidden would be impossible with mother-right, while that which is allowed would be natural, provided that the mothers belonged to different exogamous groups.

Another large group of matrilineal practices is characterized by the authority of the mother's brother. Among a people who practise patrilineal descent, inheritance, and succession the mother's brother has sometimes more authority than the father, and this authority may be accompanied by a number of other social functions which show that the tie with the mother's brother is closer than that with the father. Thus, mother's brother and sister's son may hold their property in common, or the sister's son may take the goods of his uncle without restraint. The mother's brother may act as the special guardian and instructor of his nephew, he may initiate him into the mysteries of secret societies, or may take the leading part in such rites as circumcision and its variants, ear-boring, knocking out teeth, and other operations.

2. *Distribution and varieties.*—Owing to ignorance or neglect of the complexity of mother-right on the part of ethnographers, the available evidence often leaves us uncertain how far the social processes of a people correspond with those of mother-right.

(1) *America.*—Mother-right¹ exists in America in an especially pure form. Not only are descent, inheritance, and succession purely matrilineal among many of its peoples, but the woman takes a place in social life which would justify the use of the term 'matriarchy.' A striking example of this condition is found among the Iroquois and Hurons,² where women are the heads of the households, elect the chiefs, and form the majority of the tribal council. Almost as striking an example occurs among the Pueblo Indians, where, with the exception of the Tewa,³ descent is matrilineal, the house is the property of the woman, marriage is matrilineal, and the children are regarded as belonging to the mother. Other purely or predominantly matrilineal stocks are the Caddoan (Pawnee, Arikara), the Muskogean (Creek, Choctaw, Seminole), the Yuchi, and the Timucua.

In other cases matrilineal and patrilineal tribes are found among one stock. Thus, though the Siouan tribes are mainly patrilineal, the Biloxi, Tutelo, Crow, Hidatsa, Oto, and Mandan are matrilineal; while among the Winnebago the sister's son formerly succeeded, a woman could be chief, and the mother's brother exercised much authority.⁴ Again, though the majority of Algon-

quians are patrilineal, the Mohegans are matrilineal, succession formerly passed to the sister's son among the Ojibwa,⁵ and there is evidence of matrilineal inheritance and of the authority of the mother's brother among the Menomini.⁶ Another stock with both modes of descent is the Athapascan. While the outlying Navaho and Apache in the south are matrilineal, the main body of the people in the north vary. The western tribes, such as the Loucheux, Takulli, Tahltan, and Knaikhotana, have matrilineal moieties or clans with inheritance and succession in the female line. The eastern tribes, on the other hand, are made up of bands within which social rights pass patrilineally.⁷ The tribes of California, broken up into a large number of linguistic stocks, are organized in villages. Marriage is often matrilineal, but inheritance and succession are patrilineal. A totemic clan-organization has been recorded among the Miwok, and the totemic organization of the Yokut is said to be associated with matrilineal descent.⁸ The Yuman stock practise patrilineal descent, but have also another form of social grouping which may stand in some relation to mother-right.⁹ The local form of organization seems to prevail in the Shoshonean stock, except among the Hopi, who are, however, Pueblo Indians in general culture though they speak a Shoshonean language. This form of organization also extends northwards as far as the Salish, beyond whom the Kwakiutl form an intermediate link with the matrilineal Heiltsuk, Haida, Tsimshian, and Tlingit. The Tsimshian show traces of a mixture of matrilineal and patrilineal modes; for, though a man belongs to his mother's clan, he takes the name of his father's totemic crest as part of his personal name.⁶ This mixture is still more evident among the Kwakiutl, where a man belongs to his father's clan, but takes the totemic crest of his wife's father when he marries, and transmits it to his son, who bears it till his marriage, when, in his turn, he takes the crest of his father-in-law.⁷

It is very doubtful whether the Eskimos possess any form of clan-organization. The chief social unit seems to be the family, the social rights of which pass from a father to his children.

Southward of the United States, the Seri Indians possess mother-right in a most complete form.⁸ Women take the chief place in government, sometimes putting their decisions into execution themselves, while in other cases their brothers execute their wishes and are consulted by them in cases of difficulty. The husband only visits his wife and takes a very unimportant place in her household, though he may occupy a leading place in another household in his capacity of mother's brother.

We have little knowledge of the social organization of the peoples of Central America, but the Aztecs appear to have been matrilineal, at any rate so far as succession was concerned, the ruler being followed by his brother or by his sister's son.

Our knowledge of the social organization of S. America is more fragmentary than in any other part of the world, but there are definite records of the presence of mother-right in several regions and facts which suggest its presence elsewhere. One centre of the practice is the Santa Marta peninsula in Colombia,⁹ where the Goajiro are

organized in totemic clans with matrilineal descent. Property passes to the sister's sons, and compensation for injury goes chiefly to relatives on the mother's side. Among the Aruacs, who are said to have been the original inhabitants of the peninsula, we have no record of the nature of the social organization; but the people trace their descent to an ancestress, and women take an important place in social life.¹ Another centre of mother-right is in British Guiana,² where the Arawaks practise matrilineal descent and matrilocal marriage. The neighbouring Warau and Makusi are also said to be matrilineal. If a Makusi woman marries a man of another tribe, the children will belong to the Makusi; but, as it is said that these people may marry the daughter of the sister, it is improbable that they have a matrilineal clan-organization. Apparently this region is in an intermediate condition, and the presence of patrilineal succession among the Suusi,³ a branch of the Arawaks, also points in this direction. The Arawaks who have wandered into Brazil are matrilineal,⁴ and there is another centre of mother-right in this country on the Kulisehu branch of the Xingu River.⁵ The Bakairi of this region are matrilineal in that the children of the Bakairi woman who marries a man of another tribe belong to the Bakairi, and this is true of other tribes; but, as in British Guiana, we do not know of any definite matrilineal clan-organization. Succession appears to be in an intermediate condition, a chief being succeeded by his son, his sister's son, or his daughter's husband. The mother's brother shares the exercise of authority with the father.

Among other peoples of S. America, such as the Caingang⁶ and the T'soroti,⁷ there is matrilocal marriage; but we do not know whether this custom is associated with other features of mother-right.

(2) *Oceania*.—Since the great majority of Polynesians do not possess any form of clan-system, and we know little of their local organization, the nature of descent is doubtful; but where the clan-organization exists, as in Tikopia, it is definitely patrilineal.⁸ The communism of the people also makes the nature of inheritance doubtful, but there is certainly no evidence of any of the modes of transmission which accompany mother-right. Chiefs are usually succeeded by their children, and this mode of succession also holds of hereditary occupations. In Tonga, however, succession may pass to the sister's son, and a woman may be chief in several parts of Polynesia. As a rule, the father has authority in the household; in some islands, such as Tonga and Tikopia, the mother's brother has certain social functions, but not of a kind that shows any special exercise of authority. In New Zealand,⁹ and perhaps elsewhere, matrilocal marriage is frequent.

Micronesia, on the other hand, is the seat of definite mother-right. In the Marshall and Mortlock Islands and in the Carolines, with the exception of the island of Yap, the matrilineal mode of transmission is general.¹⁰ In Ponape there are

exogamous clans with matrilineal descent, and property passes to the sister's sons.¹ Only in Yap does the son follow his father, who elsewhere is said to be a stranger to his children. Marriage appears to be largely matrilocal. In the Mariana Islands all that we are told is that the woman commands absolutely in the house.² In the Pelew Islands there are exogamous totemic clans with matrilineal descent.³

Melanesia has usually been regarded as one of the most definite examples of mother-right; but, even where descent is matrilineal, its social organization departs so widely from the typical condition as to make it doubtful whether the term should properly be used.⁴ Descent is often matrilineal, but follows the father in New Caledonia, and in many islands of the New Hebrides as well as in one part of Santa Cruz. In other places, such as most parts of Fiji and one region of the Solomons, the absence of a clan-organization makes the nature of descent doubtful. Chieftainship is always patrilineal where it is hereditary at all, and inheritance is in an intermediate condition. Property passes to the children in some places and to the sisters' children in others, while elsewhere different kinds of property follow different rules of inheritance. In Santo in the New Hebrides, people take the totem of the father as part of the personal name, but belong to the mother's clan, and in Vanua Levu in Fiji, where there is matrilineal descent, a man pays special respect to the totem of his father, though he belongs to his mother's clan and inherits her sacred land.⁵ Matrilocal marriage is not frequent even where descent is matrilineal, and there are often definite social relations between a man and his mother's brother, though not always of a kind to show any special exercise of authority on the part of the uncle.

(3) *Australia*.—There are at least four forms of social grouping in this continent: the moiety, the matrimonial class, the local group, and the totemic group; since two or more of these may co-exist, there may be more than one rule of descent.

Wherever there is a simple dual organization, as among the Dieri and Ngarabana (Urabunna) of Central Australia, descent is matrilineal so far as the moiety is concerned.

The peculiarity of descent in the case of the matrimonial class is that it is neither patrilineal nor matrilineal, but the child belongs to a class different from that of either father or mother. Where marriages follow the orthodox rule, it is not possible to tell definitely the nature either of descent of the class or of the moieties of which the classes may be regarded as subdivisions. Marriages do not always follow the ordinary rules, however, and A. R. Brown has used the exceptional marriages of certain eight-class tribes as the means of detecting the true nature of descent.⁶ By means of evidence provided by R. H. Mathews he shows that among the Arunta the children of the chief form of irregular marriage belong to the class to which they would have belonged if they had been the children of the man by a regular marriage, thus showing that descent among this people is determined by the father. Among the Tjingilli, on the other hand, the children of an irregular marriage belong to the group to which they would have belonged if they had been the offspring of the union of their mother with a husband married according to rule, showing that here descent is properly matrilineal so far as the class is concerned.

The local group is probably always patrilineal, but this form of social grouping has been largely neglected by ethnographers, and we must await further information to show whether this mode of descent is universal.

The totemic grouping shows great variety of descent. Sometimes the totemic group corresponds with the local group, and where this is so descent is necessarily patrilineal. In other cases, where the totemic groups form subdivisions of the matrilineal moieties, they are of equal necessity matrilineal. Among the Dieri there are two forms of totemic organization: one kind of totem, called *pintara*, is transmitted from father to son together with special knowledge of legends and rites, while a man takes another kind of totem called *madu* (the *murdu* of Howitt) from his mother. The intermediate condition of the people between matrilineal and patrilineal transmission of the totem is shown by the fact that the father often transmits his *madu* as well as his *pintara* to his son. Each man also obtains from his mother or her relatives special knowledge of legends, etc., relating to his maternal ancestors.¹

The communistic habits and the poor development of personal property in Australia make the subject of inheritance of little importance, but in so far as it exists it seems to follow the same lines as descent of the moiety or class. Thus, among the Arunta, whose irregular marriages point to patrilineal descent, certain objects, and especially *churinga*, or ancestral bull-rovers, pass from a man to his son, or, if he has no son, to his brother and his brother's son. Among the Tjinguilli and other tribes whose irregular marriages show them to have matrilineal descent, property passes into the possession of the mother's brothers or the daughter's husbands, the inheritors being men of the moiety of the mother of the dead man. The latter mode of inheritance also occurs among some of the tribes of the northern territory.²

Since the Australians have neither chiefs nor priests, the subject of succession is also quite unimportant. The special powers of a wizard or leech are acquired by special processes of initiation. Perhaps the topic which comes most definitely under this head is the knowledge of native legends and rites, the double character of which among the Dieri has already been considered. Elsewhere this kind of knowledge is closely connected with totemism, and probably follows the laws of transmission of the totem.

(4) *New Guinea*.—The most definite example of mother-right in this region occurs among the Massim of the south-eastern islands.³ This people, who speak a Melanesian language, practise mother-right in a purer form than is found anywhere in Melanesia proper. Not only does a man belong to the totemic clan of his mother, but property passes to his sister's children in some localities, and everywhere a chief is succeeded by his brother or his sister's son. In parts of the Papuan Gulf descent is probably matrilineal, but succession to the rank of chief is patrilineal. Another locality where mother-right apparently prevails is on the Mamberamo River, in the Dutch portion of New Guinea,⁴ where a boy belongs to his mother's tribe, and wears its distinctive dress, even when he lives with his father's people.

Elsewhere in New Guinea patrilineal customs are found, though here and there indications of mother-right occur. Thus in the Mekeo district, which has a form of the dual organization,

descent sometimes passes in the female line, and among the neighbouring Pokao descent is sometimes matrilineal, and a woman may be chief and be succeeded by her child. Among the Koita, Motu, Roro, and Mekeo peoples the mother's brother has certain social functions, and these functions are highly developed in the western islands of Torres Straits, where, side by side with patrilineal descent, inheritance, and succession, the mother's brother has more authority than the father.⁵

(5) *Indonesia*.—Father-right prevails throughout the greater part of the Malay Archipelago. There is a peculiar form of matrilocal marriage in one part of the Timor,⁶ in which the husband returns to his own home after a time, leaving behind him his children, who inherit their mother's property.

In several parts of Sumatra mother-right is present in its most definite form.⁷ Among the Malays of Minangkabau, of Upper Padang, and certain other districts there are matrilineal clans and the extreme form of matrilocal marriage in which the husband continues to dwell in his mother's house and only visits his wife. The people live in long houses, which accommodate a family in the extended sense, consisting of persons descended from one woman, the head of the household being the eldest brother of the leading woman. He takes the place of a father to his sister's children, who inherit his property after it has been enjoyed by his brothers and sisters. A form of organization intermediate between the condition of Minangkabau and father-right occurs in Tiga Loereng, where husband and wife live together, but the father has little power over his children, authority being exercised by their mother's eldest brother. Property belonging to husband or wife at the time of marriage passes to their respective clans, but that acquired by them after marriage is divided between their children and their sisters' children.

(6) *Asia*.—There are no examples of mother-right in E. Asia, with the possible exception of the Ainu in the north and Cambodia in the south. Among the Ainu relationship through the mother is said to be more important than that through the father, and the mother's brother is the most important member of the family group, but we have no definite information about descent or inheritance. The peoples of Siberia are usually organized in patrilineal clans, but matrilocal marriage is frequently present.⁸

In India there are two centres of mother-right. One of these, represented by the Khasis and Synteng of Assam, affords a most definite example of the condition.⁹ Descent is matrilineal in the clan, which is traced back to an ancestress and embraces kindred groups consisting of the female descendants of a great-grandmother. The house and other property belong to the women, and the husband or father has no authority except in those cases in which, at some time after marriage, he removes his wife and children to another house. Property is inherited by daughters, the house and its contents go to the youngest daughter, and, in default of daughters, the inheritance passes to a daughter of a mother's sister. The *siem*, or chief, is a man, except in Khyrim, but is succeeded by his brother or the son of his eldest sister. The neighbouring Wār people show an intermediate

form in that both men and women inherit, but the youngest daughter obtains an additional share. The Gāros, who live to the west of the Khasis, and the Megam, or Lynngam, who are a fusion of Khasi and Gāro, practise a form of mother-right closely resembling that of the Khasis. Though a man cannot inherit property and can possess only that acquired by his own exertions, he nevertheless exercises some control over the property of his wife, and can even appoint a member of his clan, usually his sister's son, to exercise this control in the event of his death.¹ Among the Kochs of N. Bengal, who are in contact with the Gāros, marriage is matrilineal, and a man is said to obey his wife and her mother.²

The other Indian centre of mother-right is on the Malabar coast, where matrilineal descent, inheritance, and succession are practised by the Nāyars, northern Tiyaṅs, and other peoples, including even the Muhammadan Māppilas, or Moplahs, of N. Malabar. This system of law, known as *marrumakkattayam*, is closely connected with the so-called polyandry of this part of India. In the unions of Nāyar women with Nambutiri (Nambūri) men, which are habitual in this region, the father has so little to do with his own children that he cannot touch them without pollution.

Elsewhere in S. India where descent, inheritance, and succession are patrilineal, matrilineal marriage occasionally occurs in the form known as *illatam*. This custom is especially followed in families where there is no son, male heirs being obtained by the daughter staying at her own home after marriage. Matrilineal marriage also occurs in Ceylon.

Several peoples of the Caucasus show traces of mother-right. Thus, in marriages between slaves and free persons the child follows the station of the mother, and a woman may habitually go to her father's house for the birth of her children.³ The maternal uncle has much authority, and in Georgia takes the leading part in all that concerns blood-revenge.⁴

The earliest record of mother-right comes from Lycia, where, according to Herodotus, the people took the mother's name, and the status of children in marriage between free and slave was determined by the condition of the mother.

Among the Arabs of Yemen succession passes to the sister's son, and many records of the Semites of Arabia and Palestine have been regarded as evidence of an early condition of mother-right.⁵ The marriage between half-brother and sister, of which the story of Abraham affords an example, accompanies mother-right elsewhere, and several passages in the OT, such as Gn 31⁴³ and Jg 8¹⁹, suggest this form of social organization.

At the present time the mother's brother has some degree of authority in Palestine, and a formula used in the Bedu (Bedawi) marriage ceremony shows that great importance is attached to motherhood.⁶

(7) *Africa*.—The Semites of N. Africa are definitely patrilineal, but in some Arab tribes of the Anglo-Egyptian Sūdān the wife returns to her own home for the birth of every child—a custom probably connected with matrilineal marriage. Though the Hamitic Beja are now patrilineal, there are records which show that five centuries

ago they counted genealogies in the female line and practised succession to the sons of sister and daughter.¹ Among the Bogo, Barea, and other allied Hamitic or partially Hamitic peoples the mother's brother takes an important place in social life, though the patrilineal character of their institutions is otherwise very definite.²

The Nubas of S. Kordofan form a striking exception to the patrilineal institutions of most of the mixed Hamitic and Negro Nilotic peoples, such as the Shilluks and Dinkas; as boys grow up, they spend more and more time with their mothers' brothers, who are held to be more closely related to them than their fathers. Property is transmitted to the sister's sons, and a man lives for some time with his wife's people.³ The Māsai, Nandi, Suk, and other partially Hamitic peoples of the northern part of tropical E. Africa are purely patrilineal.

The Bantu peoples show much variety in the mode of transmission of social rights. About Lake Nyasa and the Rovuma River⁴ there are a number of definitely matrilineal tribes, such as the Wa-Yao, Achewa, Wa-Makonde, and Wa-Makua. The children take the totem of the mother, a chief is succeeded by his sister's son, and the mother's brother is regarded as the nearest relative and the natural guardian of his sister's children. The Anyanja practise both modes of descent, but the patrilineal sections are said to have derived this form of transmission from the Angoni, a branch of the Ama-Zulu. This people, together with the Ama-Xosa,⁵ Ba-Suto,⁶ Ba-Thonga,⁷ and other Bantu peoples of S.E. Africa, are definitely patrilineal, though the mother's brother exercises much authority.

Passing northwards from Lake Nyasa, we find a more or less gradual change from matrilineal to patrilineal descent.⁸ The Wa-Sagara and Wa-Digo are definitely matrilineal, while among the tribes about Lindi inheritance and succession pass to the sister's children. In other tribes, such as the Wa-Niamwesi and Wa-Jagga, the mode of descent varies according as the bride-price has or has not been paid, the children belonging to the mother's people in the latter case and to that of the father in the former. In general in this region the social institutions tend to become more patrilineal on passing from the coast to the interior.

The Ba-Ganda, Ba-Hima, Ba-Nyoro, and other Bantu peoples of Uganda are definitely patrilineal.⁹ The only exceptional feature is that, while the mode of succession is purely patrilineal, the king of Uganda belongs to the totemic clan of his mother, though he also takes certain other totems connected with royalty.

The Bantu of the northern part of the Belgian Congo are mainly patrilineal.¹⁰ Among the Ba-Ngala children inherit, but the mode of descent is determined by a family council, which usually ordains that a child shall take the totem of its

father. Here the same rule holds as in E. Africa; social institutions become more matrilineal on passing from the interior towards the coast. Mother-right also occurs in Loango and Angola.¹

Among a group of Bantu peoples in the S.W. Free Congo² property and rank are transmitted to the brother or the sister's son, and among one of these peoples, the Ba-Mbala, kinship is said to be counted farther in the female than in the male line. Not only is succession matrilineal, but the mother of the chief enjoys great esteem, if not authority. We are not told of any definite social groups with either line of descent, but respect is shown to animals by not eating their flesh, and this *ikina bari* is transmitted from father to son. This institution is almost certainly a kind of totemic grouping, so that these people show a condition almost exactly the reverse of that found in Melanesia, descent being patrilineal, while inheritance and succession are mainly matrilineal. If, as seems almost certain, the *ikina bari* is a form of totem, we have here an example of the connexion of totemism with patrilineal descent, and this association comes out still more strongly among the Ova-Herero of S.W. Africa. This people possess two distinct forms of social grouping, one matrilineal and the other patrilineal, and the most recent and trustworthy account³ shows that, while there is no definite association of animals or plants with the matrilineal *eanda*, the patrilineal *oruzo* is definitely totemic.

In Nigeria and the countries west of it, we find an interesting series of transitions between mother- and father-right. The westernmost people of whom we have knowledge are the Tshi-speaking peoples of the Gold Coast.⁴ They have totemic groups with matrilineal descent, property passes to the eldest brother born of the same mother, and, in default of brothers, to the eldest sister's son. Only if there are no nephews does the son inherit; and, if there is no son, the chief slave inherits. Succession passes to the brother and the sister's son. In addition to the totemic clans, called *abusua*, there are also groups, called *ntoro*, which appear to have a totemic character.⁵ In these groups descent is in the male line, or, as the people themselves put it, 'a person takes the fetish of his father and the family of his mother,' the condition thus having a remarkable resemblance to the two totemic groupings of the Dieri of Australia. Among the neighbouring Fanti-speaking peoples the son inherits only the property of the mother, a slave inheriting the property of a man if he has no sister's son.

Among the Ewe-speaking peoples of Dahomey⁶ kinship is counted through females in the lower, and through males in the upper, classes. Among the former property passes to the brother and to the sister's son, while a chief is succeeded by his son. The Ewe of Togoland are said to count relationship through the father rather than through the mother, but the mother's brother is the proper heir. It is noteworthy that the knowledge of the art of circumcision is transmitted from father to son.⁷ Among the next people, passing eastwards, the Yoruba,⁸ we do not know of any definite rule of descent, but the people are said to trace kinship

in both lines, and a chief is succeeded by his son. That kinship through the mother is regarded as of great importance is shown by the fact that children of one father by different mothers are scarcely considered as blood-relatives. The property of a man passes to his sons, and that of a woman to her daughters. Next to the Yoruba come the Edo,⁹ who practise two forms of marriage. In one, the *amoiya* marriage, apparently the more regular, the children belong to the clan of the father, while in the other, called *isomi*, they belong to the mother's clan, unless they are bought by the father, or unless in later life they elect to stay in their father's country. In the Sobo country, whence the Edo are said to have come, there is matrilineal marriage. The Ibo,¹⁰ still farther eastward, practise male descent, and property passes to the sons, except in the *idebuwe* form of marriage, corresponding with the *isomi* marriage of the Edo, in which the children belong to their mother's clan and are the heirs of their mother's father. As a rule, a man allows his daughter to contract this form of marriage only when he has no son, the custom thus resembling the *illatam* of S. India.

(8) *Europe*.—There is hardly a European people of antiquity to whom some form of mother-right has not been ascribed.¹¹ Perhaps the clearest evidence comes from the Basques, among many of whom the father has little authority, whereas women hold property, and transmit rights to their children, even when they cannot exercise them themselves.¹² According to Strabo,¹³ women were the heads of families in Spain, and the Picts are said to have been matrilineal,¹⁴ the chief line of evidence being that where the fathers of kings are mentioned they are neither kings nor Picts, but belong to neighbouring tribes. Among the Celts the king and magician are said to have been succeeded by the sister's son.¹⁵ In Ireland the sister's son was important,¹⁶ and the frequent mention of this relative in English ballads has led F. B. Gummere¹⁷ to infer the close relation between a man and his mother's brother which is one of the features of mother-right. The account by Tacitus¹⁸ of the authority of the mother's brother affords the chief evidence in favour of mother-right among the Teutons, but the position of a woman at the head of the genealogical tree of the Lombards and passages in the *Nibelungenlied* and *Edda* point in the same direction.¹⁹ The inscriptions on tombs and other facts point to the prevalence of some form of mother-right among the Etruscans,²⁰ and this form of organization has also been claimed for the early inhabitants of Latium.²¹ The evidence for matrilineal institutions among different elements of the population of Greece has been much discussed.²² Perhaps the

strongest evidence is that in Athens half-brother and sister were allowed to marry when by the same father. Lastly, though in, rather than of, Europe, may be mentioned the Gypsies of Transylvania,¹ among whom a father shows little interest in his children, who remain with their mother's people if their mother dies and their father, as usual, marries a woman of another 'clan.'

3. Mixture-forms.—The preceding survey has shown not only that descent may follow one mode of transmission, while other social processes, such as inheritance and succession, may follow another, but that there may also be two kinds of descent. This is especially frequent where a local grouping is combined with exogamous clans or moieties, the usual rule being that the local grouping is patrilineal, while the grouping in clan or moiety is matrilineal. Another kind of mixture is that found among the Dieri of Australia and the Tshi of W. Africa, in which there are two forms of totemism with different modes of descent. The condition of the Ova-Herero of S. Africa, where a patrilineal totemic grouping is combined with matrilineal clans which are probably non-totemic, affords another example of the combination of two modes of descent. A less definite condition is that in which, combined with one or other definite mode of descent, there are customs which bring a person into definite social relations with relatives on the side from which descent is not counted. An interesting example occurs among the widely separated Tsimshian of N. America and the people of Santo in the New Hebrides. In both of these localities a person belongs to the totemic clan of his mother, but takes the totem of his father as part of his personal name. Another form of totemism which shows mixture of the two modes of transmission is found among the Massim of New Guinea and the people of Vanua Levu in Fiji, where persons belonging to the social group of the mother pay special respect to the totem of the father. A still more eccentric example is that of the Kwakiutl of the N.W. Pacific coast, who belong to the clan of the father, but are indirectly brought into relation with the clan of the mother by receiving from the father the totemic crest which he had adopted from the father of his wife when he married.

4. Associated conditions.—It is not at present possible to connect mother-right with race. It occurs side by side with father-right and with intermediate forms among many peoples, including the Australian, Melanesian, Indonesian, Bantu, W. African Negro, and N. American Indian. At the present time it is absent among Caucasian and Mongolian peoples, but it is doubtful if this has always been so. There is more reason to connect mother-right with scale of culture. Most of the peoples who practise it rank low in the scale, but there are definite exceptions to this generalization in the Khasis of Assam, the people of the west coast of India, the Minangkabau Malays of Sumatra, and many tribes of N. America.

As already pointed out, mother-right in its purest form can occur only in conjunction with the clan-organization, but it is not connected with any special form of this organization. The dual system, in which the whole community forms two exogamous moieties, is always matrilineal in Melanesia and, where not complicated with a class-system, in Australia, but the dual systems of N. America are sometimes patrilineal.

Totemism is still less habitually associated with either form of descent. As was said above, one people may even possess two forms of totemism, one associated with matrilineal and the other with

patrilineal descent. The special regard for the father's totem which accompanies some cases of matrilineal transmission suggests a peculiar connexion of totemism with father-right, and other considerations also imply that the totemic organization tends to be patrilineal.² Social organizations founded on a local basis, especially those with local exogamy, are usually patrilineal, and in societies devoid of the clan-organization, in which kinship is equally important on the two sides, it is exceptional for inheritance and succession to be matrilineal.

If mother-right is especially connected with the clan-organization, we should expect to find it associated with the classificatory, or 'clan,' system of relationship, and so it is. We do not know of any people with definite mother-right who do not use the classificatory system. The correlation is especially striking in Africa, in more than one part of which classificatory and kindred systems exist side by side. Thus, in the Anglo-Egyptian Sūdān the only people who use the classificatory system are the Nubas, and they are also the only people to practise mother-right. Again, in the series of peoples of W. Africa who show so definite a transition from matrilineal to patrilineal institutions (see above, p. 856*) it is the Tshi, with their classificatory system, whose social institutions are most clearly matrilineal.

There is some reason to suppose that mother-right may be peculiarly associated with agriculture. In N. America typical clan-systems are found especially in the maize country,³ and in Africa mother-right seems to be present especially among peoples who live chiefly by agriculture, while father-right is associated with pastoral life. The association is, however, by no means universal.

5. Survivals of mother-right.—By this expression is meant social customs found in societies organized on a patrilineal basis which are the natural concomitants of mother-right and are, therefore, assumed to be vestiges of the earlier presence of this form of society. The most prominent of the customs which have been so regarded is the relation between a man and his mother's brother. Many peoples among whom descent, inheritance, and succession are patrilineal show the existence of just such relations between a man and his sister's child as are prominent among the social practices of mother-right. That they are such survivals is especially probable where they show the authority of the mother's brother, while the power of the nephew to take any of the property of his uncle is also a natural survival of a social condition in which the sister's son is heir to his uncle's goods. Advocates of the view that these relations between a man and his mother's brother are survivals of mother-right regard it as psychologically natural that such rights to authority or property would not easily be relinquished, but would persist in one form or another long after the formal laws of the community had ordained a different disposition of authority or property.

The marriage of half-brother and sister when of the same father but different mothers has also been regarded as a survival of mother-right. In a society which attached any great importance to kinship through the father such a marriage would be impossible, while it is natural among people who pay special regard to kinship through the mother. When, therefore, this form of marriage is found among a patrilineal people, it has been held to point to an antecedent condition of mother-right.

Other survivals of mother-right have been seen

¹ For Melanesia see Rivers, ii. 337.

² Swanton, *Amer. Anth.* vii. 671.

³ H. von Wilslocki, *Vom wandernden Zigeunervolke*, Hamburg, 1890, p. 66.

in tradition and myth. It is frequently the case among matrilineal peoples that the descent of the clan or tribe is ascribed to a female ancestor, and the belief in a female ancestor among a patrilineal people has been regarded as a survival of mother-right. A similar supposed survival is the widespread mythological theme of unwitting patricide.¹ This absence of knowledge of the father would be natural in the more pronounced forms of matrilocal marriage, and, in consequence, the occurrence of the theme in the mythology of a people has been regarded as evidence that the people were once in a stage of mother-right. Amazon-legends have also been interpreted as relics of mother-right.

Less direct is the relation of certain social customs, such as the *couvade* and the cross-cousin marriage. According to one theory, the *couvade* is associated with the desire on the part of the father to assert his rights over his child, and those who adopt this explanation of the custom will regard it as a survival of mother-right when it is found in a patrilineal society. Again, there is reason to believe that in some parts of the world the cross-cousin marriage (see above, p. 425 f.) has come into existence through the desire of a father that his son shall acquire his property by marrying a woman who would be one of his heirs under a condition of mother-right. Another custom which may be a survival of mother-right is the rule found in several parts of Africa that the daughter or sister of a king shall not bear children. Such a prohibition would put an end to succession by the sister's son.

Etyymology has also been called upon for evidence of former mother-right. Thus, the fact that the Chinese word for clan-name means 'born of a woman' has been held to point to matrilineal descent in China,² and the derivation of the Arabic word for 'clan' has been adduced to support a similar conclusion in the case of early Semitic society.³

6. History.—In several parts of the world we have definite evidence that a condition of mother-right has changed either into one of father-right or into a form of social organization in which social rights are recognized with the relatives of both father and mother. Thus there is evidence that some form of mother-right once existed in Europe, while in the Sūdān there is historical proof that five hundred years ago the Beja, who are now definitely patrilineal, kept their genealogies in the female line and transmitted property to the sons of sister or daughter. In Melanesia, again, and in some parts of America, there is positive evidence of a change from matrilineal to patrilineal institutions, the transition being still in progress in some parts of Melanesia. On the other hand, there is no unequivocal evidence from any part of the world of a change having taken place in the opposite direction. Consequently, it has been held by many students that the change from matrilineal to patrilineal institutions has been a universal feature of the history of human society, and this proposition has become a dogma among many anthropologists.

This dogma has recently been attacked from two quarters. The idea of the priority of mother-right is supported in many parts of the world by the low state of culture of the peoples who possess this form of social organization, but, as already pointed out, this is not universally true, and students of the ethnology of N. America have been led to question the dogma, largely because the matrilineal Iroquois and Pueblo Indians are among the most advanced peoples of the continent. The other line of attack is closely connected with

a change which has recently taken place in the attitude of many students towards the history of social institutions. The idea that any product of human society, such as mother-right, has been universal is closely connected with the belief that human society as a whole has been the product of a relatively simple process of evolution which has proceeded everywhere on similar lines and passed through similar stages. To those inspired by this belief it was only necessary to show that mother-right has often changed into father-right, and it followed that this order must have been universal. Among many students, however, the conviction has been growing that human society is not the product of a simple process of evolution, but has been built up by a highly complex process in which a vast variety of forms have been produced by blending of cultures. If the transitions between mother-right and father-right have arisen as the result of the mixture of peoples, we should not expect to find that one form has always preceded the other, but it is probable that in the vast complexity of human progress matrilineal should sometimes have been superposed on patrilineal institutions, and that sometimes father-right would have changed into mother-right. One school of students who have adopted this point of view, viz. that of which F. Graebner and W. Schmidt are the most distinguished adherents, believe that in most parts of the world matrilineal migrants have settled among earlier patrilineal peoples, so that the main change has been from father-right to mother-right, and not in the reverse direction. According to them, people possessing the dual organization with matrilineal descent have settled among patrilineal totemic peoples, and have thus produced the various forms intermediate between the two kinds of society which are found in so many parts of the world. According to this school, the undoubted changes from matrilineal to patrilineal institutions which are found in certain regions are the result of later movements, the change in Melanesia, e.g., being due to relatively late Polynesian settlements, and that in N. America to European influence.

There is much reason to suppose that Graebner and Schmidt have gone too far in their reaction against the prevailing view, and that the evidence on which they base their opinions is fallacious. But, while it is almost certain that by far the most frequent process throughout the world has been a transition from mother- to father-right, the reverse change may have occurred. The region which presents the strongest evidence of a change in this direction is N. America. Not only do some of its matrilineal peoples, such as the Iroquois and Pueblo Indians, possess the most advanced cultures of the continent, but, where one people, such as the Déné or northern Athapascans, practise both lines of descent, it is the less cultured who use the patrilineal mode. Moreover, it is said that there is definite evidence that matrilineal institutions have been taken over from others by people who were previously patrilineal or were devoid of any form of clan-organization. Several peoples of N. America possess a custom which provides a mechanism for changing one mode of descent into another. Personal names are often definitely connected with a moiety or clan, each social group having names especially reserved for its members. Among some matrilineal people of N. America, such as the Shawnees, a father gives his own clan-name to his child, thus taking a definite step towards the transference of the child to his own social group. This or some similar mechanism might well have come into play to assist a change in the opposite direction.

One of the cases most often put forward by

¹ M. A. Potter, *Sahrah and Rustem*.

² H. A. Giles, *China and the Chinese*, New York, 1902, p. 27.

³ Wilken, *Germ. ed.* p. 38.

American ethnologists as an example of change from father- to mother-right is that of the Kwakiutl.¹ This people practise patrilineal descent, but the peculiar system by which a man takes the crest of his wife's father has been ascribed to the influence of their northern matrilineal neighbours, the Tsimshian and Haida. Other examples are the Athapascan tribes bordering on the Tlingit, who are said to have adopted the matrilineal dual organization of the people, and the Babine branch of the Takulli, another Athapascan tribe who are said to have taken their matrilineal four-clan system from the Tsimshian.

In other parts of the world there is definite evidence that the change has been from the matrilineal to the patrilineal mode. There is a large body of evidence pointing to the change having been in this direction in Melanesia;² but even here it is possible that certain conditions, such as the highly developed mother-right of the Massim of New Guinea, may have been assisted by some later matrilineal influence. In Africa, again, there is much reason to believe that the change has been in the patrilineal direction. The transition from matrilineal to patrilineal institutions which occurs among the peoples of W. Africa from the Tshi, to the Ibo points to the gradual infiltration of immigrants coming from the north-east, who became the chiefs of those among whom they settled. While introducing their patrilineal institutions completely in the east, they did not succeed in altering descent among the general body of the people as they progressed westwards. The transitions found among the Bantu and the association of patrilineal transmission with high development of culture among such people as the Ba-Ganda and Ama-Zulu would seem to be the result of the settlement of a patrilineal pastoral people among a matrilineal population who, till then, had thriven upon agriculture.

7. Origin.—Until we know the history of this form of social organization, it is hardly profitable to discuss its origin at length, but some of the leading views which have been put forward may be mentioned.

In the first place, mother-right has been widely held to be the natural consequence of sexual promiscuity and group-marriage. The less important is fatherhood in a society, the more will that society be driven to base its social rights upon the mother. Another view is that matrilineal descent is a secondary consequence of matrilineal marriage. Where a husband merely visits his wife and is only an outsider in her household, descent and other social processes must be expected to rest on the relation between mother and child. A third view regards mother-right as a social state which has resulted from the dominance of woman, and especially from her importance in agriculture. As already seen, there is reason to connect mother-right with a high development of the art of agriculture, especially in N. America, and it is noteworthy that it is in this continent that we have our clearest evidence of the dominance of the woman.

W. H. K. RIVERS.

MOTIVE.—1. Different senses.—The term 'motive' is used in philosophy and psychology in four different senses.

(1) In the first and most general sense it means any force, of an internal or mental character, which impels to action or prevents some kind of action, be the force conscious or unconscious, and the action voluntary or non-voluntary. Thus Bentham defines motive as 'any thing that can contribute to give birth to, or even to prevent, any kind of action' (*Principles of Morals and Legislation*, p. 46). In this sense motive includes what Reid calls mechanical principles of action, such as instinct and habit, and also what Bentham calls 'speculative' motives, which influence acts that rest purely in the understanding.

(2) In a second sense 'motive' is taken with a more restricted signification, as limited to some end which we present to ourselves and of which we are conscious. Bentham has this meaning in view when he defines motive as 'any thing whatsoever, which, by influencing the will of a sensitive being, is supposed to serve as a means of determining him to act, or voluntarily to forbear to act, upon any occasion' (*ib.*). Such motives are termed by Bentham 'practical,' and are, he holds, ultimately reducible to pleasure and pain, though whether it be the expectation of the pain or the pain which accompanies that expectation that is the motive he leaves undetermined (p. 47, note). This contains the germ of an important distinction. In motives in this sense we may distinguish two things: a subjective and affective element, sometimes called affect, a spring of action, *Triebfeder*; and an objective, presented or intellectual element. Whether this subjective element is reducible to pleasure or pain, or includes more, and in what relation it stands to the objective, intellectual element and to the conative factor in mind, are among the most difficult questions in the psychology of the feelings. Here it is taken as standing in relation to certain volitions as a spring of action (see Morell, *Outlines of Mental Philosophy*, pt. vii. chs. i. and ii.; Baldwin, *Handbook of Psychology*, ii. 313-315, 332 f., 354; Stout, *Manual of Psychology*, bk. i. ch. i.; Mellone and Drummond, *Elements of Psychology*, Edinburgh and London, 1907, ch. iv.). Cf. Bentham's figurative and unfigurative motives (*infra*).

(3) A third sense of the word 'motive' occurs in the writings of Green and his followers. According to the teaching of Green, something more is required to constitute a motive than the conscious presentation of an end. In the analysis of one of Green's followers, the voluntary satisfaction of a want involves five things:

(1) The want. (2) The feeling of the want. (3) An idea of an object by which the want can be satisfied. (4) An idea of the satisfaction actually taking place, the work of the imagination. (5) The presentation of this satisfaction as, under the circumstances, the greatest good. The self identifying itself with the attainment of the object; finding in the realisation of the idea, not the satisfaction of a want merely, but the satisfaction of self' (D'Arcy, *Short Study of Ethics*, p. 32).

It is only to this last stage (5) that Green and D'Arcy apply the term 'motive.' Hence the doctrines that a conflict of motives is impossible and a strongest motive an absurdity (Green, *Prolegomena to Ethics*, bk. ii. ch. i.).

(4) A fourth sense of the word 'motive' belongs to Kant. Kant reserves the term *Bewegungsgrund* for the objective ground of the volition, which he opposes to the subjective ground of the desire, or the spring (*Triebfeder*). The objective ground of the self-determination of the will is the end which is assigned by reason alone, and is free from all

¹ F. Boas, *Rep. U.S. Nat. Mus.*, 1896, p. 334.

² Rivers, *ib.* 90, 319.

mixture of passion and sensuous affection (*Werke*, ed. Rosenkranz and Schubert, viii. 55; Abbott, *Kant's Theory of Ethics*, London, 1909, p. 45). Such objective ends are common to us with all rational beings, and are to be distinguished from subjective ends, to which we are impelled by natural disposition. Unlike all inclination and fear, respect or reverence for the moral law is an effect, not a cause (Kant, *Werke*, viii. 21, note). Regarded as a spring, this feeling acts negatively only.

In these four senses of the word 'motive' we see a progressive change of meaning from that of a mere impelling force, not even necessarily accompanied by consciousness, to that of an internal impulsion to the existence of which consciousness is essential; passing thence to the idea of an object which gives satisfaction; finally ending in Kant in the conception of motive as an object which is free from, and even opposed to, all subjective ground of desire. Green's view, though later in point of time, seems not so developed as that of Kant, since in Green the object is still made to be a motive by relation to a want or internal principle of desire, though such want or desire is again conceived as dependent on the object with which the self identifies itself. Kant's distinction of motive and spring and relegation of these terms to different classes of action get rid of the wavering between contradictory points of view implicit in Green's doctrine.

Whether we shall give to the term 'motive' the extensive signification contained under (1) may appear a mere question of the use of language; but, as is the case in most questions of terminology, important issues lie concealed beneath the purely verbal discussion. This extensive use of the word early aroused dissent. Reid in 1793, criticizing Crombie's 'Essay on Philosophical Necessity,' said:

'I understood a motive, when applied to a human being, to be that for the sake of which he acts, and, therefore, that what he never was conscious of, can no more be a motive to determine his will, than it can be an argument to convince his judgment.'

Now, I learn that any circumstance arising from habit, or some mechanical instinctive cause, may be a motive, though it never entered into the thought of the agent.

From this reinforcement of motives, of which we are unconscious, every volition may be supplied with a motive, and even a predominant one, when it is wanted' (Reid, *Works*, ed. Hamilton, p. 37).

Reid then acutely remarks that 'this addition to his [Crombie's] defensive force takes just as much from his offensive,' since it undermines the evidence for the necessary action of motives known or felt. In other words, necessitation by efficient is fatal to necessitation by final causes. At this stage the distinction seems to turn upon the presence or absence of consciousness. But, even if we regard consciousness as the condition of the existence of motive in sense (2), this does not prevent the motivation or impelling force being essentially mechanical as when non-voluntary in sense (1). Green's doctrine tries to evade this by assigning to self-consciousness the power of determining the predominance of the motive which actually does succeed, while still admitting that the end to which we thus determine ourselves is assigned by the pathological or affective element. Kant, on the other hand, assigns to reason a power of determining action to an end, which is quite independent of, and even opposed to, the pathological feeling. 'Motive' in this sense has passed over entirely from the meaning of an impelling force to that of an object determined and decided upon by reason.

These distinctions are closely bound up with the inquiry regarding the freedom of the will. If our will is possessed of an original power by which it can control the direction in which it utters itself, then the causal action of motives must be distinct from mechanical impulsion; they may induce, or

incline, but do not determine, according to inevitable law. If, on the other hand, our will has no such power, what we call inducing and inclining must be merely the subjective side of the collision of predestined forces, of which we are the theatre or rather the play itself. If this be the case, the appearance of a causation, which may yield to conscious motives, but is not controlled by them, must be an illusion. The illusion demands explanation. This Münsterberg undertook to furnish in his *Willenshandlung* (1879). In *Man's Place in the Cosmos* (2 Edinburgh and London, 1902), J. Seth Pringle-Pattison gives an acute analysis of Münsterberg's views. According to Münsterberg, the will is only a complex of sensations. Our activity, whether the inner activity of attention or the outer activity of muscular contraction, appears to us to be free, just because the result of the activity is already present in idea, and is, in all cases, accompanied by the sensations flowing from previous motor innervation. The feeling of innervation itself is 'just the memory-idea of the movement, anticipating the movement itself.' In the *Grundzüge der Psychologie* (1900) Münsterberg's position is modified by a Fichtean point of view. The 'action theory of mind' here put forward makes the consciousness of sensation dependent on motor discharge. It, therefore, precludes any theory of action other than that of mechanical causation. Nor is this conclusion altered by the theory of taking an attitude (*Stellungnahme*) towards the world, which Münsterberg puts forward. Such activity as lying outside consciousness could not even give rise to the illusion of voluntary activity.

It was maintained by Hartley (*Observations on Man*, London, 1810, i. 522) that 'to prove that a man has free will in the sense opposite to mechanism, he ought to feel that he can do different things while the motives remain precisely the same,' and that here 'the internal feelings are entirely against free will where the motives are of a sufficient magnitude to be evident,' while he admits a power of resisting motives. Such a power, on Hartley's view, can come only from some other and stronger motive; that is, there is no intrinsic power of resisting motives. The attribution to the self of an intrinsic power of strengthening indefinitely certain desires, which then become motives (in Green's sense), seems the essence of the third theory of motives. There is an illusory atmosphere of determinism about Green's theory. The will is determined by motives. That desire only is a motive which is successful. There is no conflict of motives, nor any strongest motive. But then the strongest desire is made to be the strongest, i.e. to be a motive by the action of the eternal consciousness which is perpetually reproducing itself in us, and which helps to constitute, in cognition and action, all the objects of knowing and will. Is now this action of the eternal consciousness something from all eternity, unalterably the same? The result is practically identical with Hartley's—the only freedom in it is that the ego, since it determines the motive, is consequently, in being determined by the motive, determined by itself. This is only Spinozistic necessity. But, if the action of the eternal ego on the finite ego is not so predetermined, is something which, at the moment of decision, may fall out differently on different occasions, notwithstanding identity of desire and circumstances, then such action is not different from free will in the ordinary sense, and implies a surplus of undetermined or self-determined free activity of the ego, as in the Kantian doctrine.

Green's theory of motives must be carefully distinguished from a modern psychological doctrine, to which it bears a strong verbal resemblance. Green says (*Proleg. to Ethics*, p. 93) that

an appetite or want 'only becomes a motive, so far as upon the want there supervenes the presentation of the want by a self-conscious subject to himself and with it the idea of a self-satisfaction to be attained in the filling of the want.' Stout, too, says (*Manual of Psychology*³, p. 709):

'Motives are not mere impulses. They come before consciousness as reasons why I should act in this or that way. They are not independent forces fighting out a battle among themselves, while the Ego remains a mere spectator. On the contrary, the motives are motives only in so far as they arise from the nature of the Self, and pre-suppose the conception of the Self as a determining factor. From this it follows that the recognised reasons for a decision can never constitute the entire cause of decision. Behind them there always lies the Self as a whole, and what this involves can never be completely analysed or stated in the form of definite reasons or special motives.'

The great verbal similarity of this to what Green says is evident. But to Green the self-conscious subject, through determination by which a want becomes a motive, is 'a principle of other than natural origin,' is, in fact, an entity of a sort. To Stout the self as a whole, even if what it involves can never be completely analyzed or stated, is not an entitative principle eternal or otherwise, but, rather, the 'thought of the self.' In deliberation, he says, 'the concept of the Self as a whole will not directly tend to reinforce or suppress a desire' (p. 708).

'A certain line of action being suggested as possible, I contemplate myself as I shall be if I put it in execution, so as to make it part of my actual life-history, and on the other hand I contemplate myself as I shall be if I leave it undone. I follow out this representation of a hypothetical Self in more or less detail until that turning-point in the process which is called Voluntary Decision emerges' (ib. p. 709).

This theory, that motives arise and are constituted by relation to the conception of self, whether we take it in Green's metaphysical or in Stout's psychological form, as a *general* theory of motives, seems not to be true. That very many motives are determined by conscious relating of the end in view to the self is true—notably the self-regarding ones. But it is difficult to regard altruistic motives as necessarily related to the concept of self. They may sometimes be so, but not necessarily or universally. The highest moral ends are disinterested. The disinterested character of æsthetic emotion has been emphasized by Burke and Kant, Hegel and Schopenhauer. Molinos, Fénelon, and Madame Guyon have maintained the possibility of a disinterested love of God. It must, therefore, be admitted that, while the analysis of the term 'motive' given under (2) and (3) is in many cases a correct and complete analysis, there are other cases where, even if impelled towards the end by some subjective affective element, the self-conscious satisfaction of this impulse need form no part of the objective end in view nor even of the subjective impelling force.

It is when we come to the fourth sense of the term 'motive'—the strict sense given to it by Kant—that we find the most striking detachment of the term from all association with the subjective self. It may still bear relation to something universal, common to the individual selves, but the ends are then ends in which the individual self loses its individuality. They are objective. This is the essential of morality to Kant, and the point which separates the ethics of Kant from the ethics of Green. It was to retain in the moral motive the reference to self that Green was compelled to characterize the good as the 'perfection of human character' or 'self-devotion to the perfecting of man.' D'Arcy (*Short Study of Ethics*³, p. 277) has seen this defect in the ethics of Green. The defect is, however, a necessary outcome of Green's initial position. To Kant, on the other hand, reason, not the mere self, is able to give itself an end, which, though realized in the matter of desire, is independent of

the relation of that matter to the particular self. Kant is often criticized as if the categorical imperative set up ends, detached from all the material of desire and inclination, as if purely formal ends existed by themselves. It is the impenetration of particular desires and inclinations by the categorical law of duty that gives to the individual the absolute value expressed in that form of the categorical imperative which is expressed: 'so treat humanity whether in thine own person or that of another always as an end and never as a means.'

We have, therefore, in our highest ends, moral, æsthetic, and religious, the singular paradox that in them an element, which comes into existence only through particular feelings and inclinations, becomes, as regards its essential character, independent of these and a motive of selfless and disinterested action.

In the above discussion we have considered the several distinct senses in which the term 'motive' may be used. There are, however, some ambiguities connected with its use which, while not really adding to the multiplicity of senses, might nevertheless appear to do so. Bentham says:

'Owing to the poverty and unsettled state of language, the word *motive* is employed indiscriminately to denote two kinds of objects, which, for the better understanding of the subject, it is necessary should be distinguished. On some occasions it is employed to denote any of those really existing incidents from whence the act in question is supposed to take its rise. The sense it bears on these occasions may be styled its literal or *unfigurative* sense. On other occasions it is employed to denote a certain fictitious entity, a passion, an affection of the mind, an ideal being, which upon the happening of any such incident is considered as operating upon the mind, and prompting it to take that course, towards which it is impelled by the influence of such incident. Motives of this class are Avarice, Indolence, Benevolence, and so forth. . . . This latter may be styled the *figurative* sense of the term *motive*' (p. 46 f.).

The real incidents—motives in the unfigurative sense—are:

1. The *internal* perception of any individual lot of pleasure or pain, the expectation of which is looked upon as calculated to determine you to act in such or such a manner; 2, any *external* event, the happening whereof is regarded as having a tendency to bring about the perception of such pleasure or such pain.' Each of these is further distinguished according as it is in *prospect* or in *esse*, meaning by the former the posterior possible object which is looked forward to as the consequence of his action [or inaction], by the latter, the present existing object or event which takes place upon a man's looking forward to the other.

These distinctions partly depend on Bentham's doctrine that the only motives are pleasure and pain, which has been ably criticized by Sidgwick (*Methods of Ethics*, bk. i. ch. iv.). They may be reduced to those drawn by Fleming (*Manual of Moral Philosophy*, ed. London, 1870, p. 178) between 'the external object, the internal principle, and the state or affection of mind resulting from the one being addressed to the other.' The internal principle may be dismissed as, at any rate for the purposes of this article, a 'fictitious entity.' The distinction, however, between the external object and the resulting state or affection of mind has an important bearing on the foregoing discussion. It might seem plausible to say, as Fleming says, that 'speaking strictly it [the term 'motive'] should be applied to the terminating state or affection of mind which arises from a principle of human nature having been addressed by an object adapted to it; because it is this state or affection of mind which prompts to action.' This is true in all cases where an affection is the spring of action. But there are cases in which the affection does not exist, or the action takes place without, or contrary to, its prompting. In the 'beautiful soul' in Schiller's *Anmuth und Würde*, affection produces moral results, but, to Kant, true moral action is independent of such affection. In art, however

much feeling may guide, it cannot be considered as the motive. In true art it cannot even be said that there is a conscious image or ideal which impels the artist to produce. In art, as Schelling says, the ego is unconscious in regard to its product (*System des transcendentalen Idealismus*, vi., Tübingen, 1800 [*Sammtl. Werke*, Stuttgart, 1856-61, iii.]).

An important distinction is that between motive and intention. The nature of intentionality is thus stated by Bentham:

'Let us observe the connexion there is between intentionality and consciousness. When the act itself is intentional, and with respect to the existence of all the circumstances *advised*, as also with respect to the materiality of those circumstances, in relation to a given consequence, and there is no mis-supposal with regard to any preventive circumstance, that consequence must also be intentional. In other words, advisedness, with respect to the circumstances, if clear from the mis-supposal of any preventive circumstance, extends the intentionality from the act to the consequences' (p. 44).

The distinction itself is most clearly expressed by Martineau (*Types of Ethical Theory*, ii. 272):

'The *Intention* comprises the whole contemplated operations of the act, both those for the sake of which, and those in spite of which, we do it. The *Motive* comprises only the former.'

Dividing the intention as Martineau does into persuasives, dissuasives, and neutral consequences, it is only the first that fall under the heading of 'motive' (cf. Mill, *Utilitarianism*, London, 1879, ch. ii. p. 27; Muirhead, *Elements of Ethics*, p. 61; Mackenzie, *Manual of Ethics*, p. 64 ff.).

This excludes from intention all motives in sense (1) which are unconscious or involuntary. It includes motives in senses (2) and (3). It is more difficult to say whether it includes motives in sense (4). The particular object or end is certainly included in the intention, but the law which the will gives to itself, while controlling and determining the intention, seems not necessarily to form part of it. The act, even if done for the sake of the law, has not the law in its universality as its end. To make Martineau's statement true we must understand 'persuasives' in an affective sense.

2. Classification of motives.—The various classifications reflect the difficulties which have attended the foregoing discussions. Our impulses or active principles are classified by Reid into mechanical, animal, and rational; but only to the last two does he apply the term 'motives.' Stewart has criticized this classification on the grounds that 'mechanical' cannot be applied to instincts and habits (which is done by Reid), nor to any of our active principles. It is capricious to call our appetites animal principles, because common to man and brutes, and to distinguish our instincts as mechanical, in regard to which our nature bears so strong an analogy to the lower animals. Mechanical principles of action produce their effect without any will or intention on our part. Animal principles of action require intention and will, but not judgment. Rational principles of action require not only intention or will, but judgment or reason. Stewart censures Reid for including under animal principles of action the desire of knowledge, of esteem, pity, patriotism, etc.

Stewart's own classification falls under five heads: (1) appetites, (2) desires, (3) affections, (4) self-love, (5) moral faculty. This classification has been ably criticized by Martineau (ii. 134).

McCosh gives the following classification of the operative or motive powers, or, as he prefers to say, of the motive and moral powers:

- i. The native appetencies of the mind leading to emotions. These include: (1) the inclination to exercise every native power voluntarily or involuntarily; (2) the desire to receive pleasure and avoid pain; (3) the appetites: tendencies to seek for knowledge, esteem, society, power, property; (4) an inward principle that impels to seek for the beautiful; (5) the moral power as a prompting energy; (6) unselfish motives prompting to action in relation to other beings, e.g. sympathy.

- ii. The will not as furnishing incitements, inducements, or motives, but as seated above these, sanctioning, restraining, and deciding among them
- iii. The conscience—a cognitive power involving certain beliefs and judgments (*Intuitions of the Mind*, p. 242 ff.).

More important than any of these classifications is that of Martineau (ii. 129-175). He begins by distinguishing between two sets of impelling principles in man: (1) 'those which urge him, in the way of unreflecting instinct, to appropriate objects or natural expression,' and (2) 'those which supervene upon self-knowledge and experience, and in which the preconception is present of an end gratifying to some recognized feeling' (p. 135). The former he calls primary springs of action, the latter secondary. Under the primary come—(1) propensions: including organic appetites and animal spontaneity; (2) passions: antipathy, fear, anger; these do not arise as forces from the needs of our own nature, but are rather what we suffer at the hands of objects; (3) affections: parental, social, compassionate; these operate as attractions towards other persons; (4) sentiments: wonder, admiration, reverence; these direct themselves upon *ideal relations*, objects of apprehension or thought that are above us, yet potentially ours.

Under the secondary principles which are characterized by their *interested* nature or invariably aim to produce certain states of ourselves come—(1) secondary propensions: love of pleasure, money, power; (2) secondary passions: malice, vindictiveness, suspiciousness; (3) secondary affections: sentimentality; (4) secondary sentiments: self-culture, aestheticism, interest in religion.

The secondary series is the self-conscious counterpart of the primary series. These principles give rise to ulterior combinations, such as love of praise, emulation, fellow-feeling. In addition to these are prudence and conscience, but neither is, according to Martineau, a positive principle, so as to range in the series of impulses. Each exercises a judicial function—prudence among the secondary principles, conscience over the whole.

If we examine these various classifications, we shall find much to confirm the wide view of motives which we have taken. Martineau's distinction of primary and secondary springs of action directly contradicts the narrow view of motives taken by Green, which would limit motives to those associated with the notion of self. Such association gives rise to secondary springs of action. Again, some of these classifications rightly regard conscience and the moral faculty as motive powers prompting to action and yet *per se* incapable of being identified with an affective element. In Martineau's theory the moral element consists in relative position in a scale of excellence intuitively discerned. Other moralists might seek to analyze further in what this excellence consists, and this analysis might be dangerous to the intuitive scale, might show that the position of a spring varies with circumstances; but the insight that the moral element is not an affective spring of action, in either the primary or secondary form, remains; and with it remains the necessity of recognizing a fourth form of motive, the motivity of which, whether proceeding from an autonomy of the will itself or from a recognition of an intrinsic authority in certain imperatives of action, or from a recognition of superiority or authority in inward springs or outward courses of conduct, demands a unique position for itself in the classification of those forces which impel the human will to action.

MOUNTAINS, MOUNTAIN-GODS.

There are few peoples who have not looked upon mountains with awe and reverence, or who have not paid worship to them or to gods or spirits associated with them in various ways. Their height, their vastness, the mystery of their recesses, the veil of mist or cloud now shrouding them, now dispersed from them, the strange noises which the wind makes in their gorges, the crash of a fall of rock, or the effect of the echo, their suggestion of power, their appearance of watching the intruder upon their solitude—all give to them an air of personality, and easily inspire an attitude of reverence and eventually of worship. They are next thought to have a spirit akin to, yet greater than, man's, and such a spirit may become separate from the mountain and exist as a god of the mountain. The natural dangers encountered by the traveller or mountain-dweller, as well as the mystery of gorge, precipice, or cavern, suggest the presence of spirits, dangerous or at times beneficent, and in many cases also ghosts of the dead are thought to haunt the mountains. Their summits, being near the sky and often surrounded by cloud, suggest their connexion with gods of sky or rain; or the remoteness and mystery of their peaks cause them to be regarded as dwellings of gods or of ghosts.

Sporadically we find no cult of mountains or mountain-spirits, but that is generally where no cult of nature exists, or, of course, where no mountains exist. Where they are feared, it is generally as much because of the demons supposed to infest them as because of their own suggestion of terror. The horror of mountains found in writers from Waller to the time of Scott, Byron, and Wordsworth was perhaps a literary affectation as much as genuine lack of appreciation. Wordsworth's 'voice of the mountains' has generally made a strong appeal to men and has given a great impulse to the imagination.

1. The personification of mountains.—The various impressions which mountains made upon men's minds led to their being regarded as alive, or possessed of a power lurking behind their massive forms, and, finally, to their personification in a greater or less degree. The next stage was that the mountain-god—the personified mountain which received worship—became a god of the mountain, separate from it, yet connected with it. It is difficult in particular cases to say which of these stages is intended, or to disentangle them, since the human mind so easily adopts either attitude; and, even where a god of the mountain is worshipped, the mountain itself still looms vast and, as it were, personal. In this section we shall examine instances where the mountain seems to be worshipped for itself alone or to be regarded as sacred and to some extent personal.

The Choles of Itza regarded one particular hill as god of all the mountains, and on it burned a perpetual fire.¹ To the Huichol Indians every hill and rock of peculiar shape is a deity,² and hills as well as lakes, rain, etc., are tribal gods of the Thompson Indians.³ The Mexicans had gods of mountains (§ 2), but they regarded all mountains as divine and personified them. Itzacuahuatl was the wife of Popocatepetl. Molina describes the hill Huanacauri as the chief *huaca* of the Incas.⁴ In Korea mountains are personified, and the idea of guardianship, e.g., of towns, is associated with them (cf. § 5). Yet there are also spirits of mountains.⁵ In Japan the term *kami*, applied to deities, is likewise applied to mountains, which are supposed to possess great power.⁶ Similarly in China, where

spirits of mountains have always been worshipped, mountains themselves are included among the *shen*, or beneficent gods. There are ten principal mountains included among the *ts'ui*, or earth-gods—the five *yoh*, of which the greatest is Tai Shan in Shantung, and the five *chen*.¹ Of each of these there is one in each chief cardinal point (the four mountains), and one in the centre. The chief minister of Yao was called 'president of the mountains.'² To these, or to their spirits, sacrifices are made on the great altar of the earth at the summer solstice. Other mountains are also included in the category of gods and in the official worship (see also § 7).³ In Tibet Mt. Kanchinjunga was once an object of worship, but is now regarded as the dwelling of a god of the same name. There are four great deified mountains in Tibet.⁴ In Media and in Phrygia gods were identified with mountains, and a cult was paid to them on their summits.⁵ Among the Celts a cult of mountains, as well as of gods of mountains, is to be traced. One inscription was 'To the Mountains'; the mountains are often invoked in spell or prayer or invocation in Irish texts; and Gildas speaks of the 'blind people' who adored mountains and other parts of nature.⁶ While the Greeks adored divinities associated with mountains, some mountains still retained a degree of personification—e.g., Mt. Ida as a nymph.⁷ In India as early as the Rîgveda (vii. xxxv. 8) there is a direct appeal to the mountains: 'May the mountains be propitious to us.' The Hîmalaya is king of mountains, the great divine range *par excellence*, pre-eminently sacred. It 'cannot be shaken,' and it is the abode of the dead, of mighty creatures, and of living saints and ascetics, as well as the haunt of demons of all kinds. But its own virtues are supreme. To think of it is to gain vast merit; to see it is to have one's sins removed. It was personified as Himavat or Harivamśa, father of Gaṅgā and Umā Devi, or Pārvaī, the mountain-goddess, identified with one of the peaks.⁸

An ancient story tells how Pārvaī covered up the eyes of Mahādeva when he was performing *tapas* on Himavat. Flame burst from his forehead and scorched the mountain; but, when she assumed a submissive attitude, her father was restored to his former condition.⁹

Among the aboriginal tribes of India mountains are personified. The Santāls sacrifice to Marang Buri, at once a mountain and a god. Other tribes have no other gods but mountains, rivers, and the dead.¹⁰ Among the Semites mountains and hills had been personified, and many of them were regarded as peculiarly sacred—the dwelling-place or seat of a god (§ 5). But the evidence is mainly that of cults upon hills or high places to a god associated with these (§ 7). The pagan Slavs are described as worshipping mountains.¹¹

Where a god associated with a hill or mountain bears a name similar to it, it is probable that the mountain personified gave this name to the subsequent god of the mountain. A Celtic god Poeninus was god of the Pennine Alps, Voëgus was god of the Vosges mountains. Cf. other examples above.

Evidence of the personification of mountains is also to be found in the sporadic cases of alleged descent from mountains, possibly because these mark the region whence some tribe took its origin or migrated.

The Navahos thought that they came from the bowels of a great mountain near the San Juan.¹² Some Mexicans regarded the mountain Cacalepei as their mother.¹³ The Iranian kings were supposed to have descended from the mountain Ushidarena.¹⁴

2. Gods and mountains.—Besides being personified, mountains are associated with clearly defined gods, either as their occasional or as their more permanent seats or abodes, or there are gods of the mountains distinct from these as personified.

The house of the Māsaī god Ngai (Eg-ai) is in the snows of Kilimanjaro.¹⁵ Among the Yoruba there is a god of the mountains called Oke. In Hawaii several distinct deities of the volcano Kilauea were recognized, each of these being connected with some part of it.¹⁶ Among the Todas most deities are associated with hills, each occupying a separate peak, on the summit of which is a stone circle, barrow, or cairn.¹⁷ The

Khonds worship a god of hills, and among the Kols the great deity Marang Burū, or 'Great Mountain,' is the rain-god, Marang Burū being a conspicuous peak in Chotā Nāgpur which is either the god himself or his dwelling-place. Before the time of rain elaborate ceremonies take place on the mountain for rain and a fruitful season.¹ Mt. Shasta is thought by American Indian tribes to have been made of snow and ice by the Great Spirit from the sky, after which he stepped down upon it and hollowed it out as a wigwam where he might live on his visits to earth.² Among the Thompson Indians the 'Old Man' is a being living on high mountains, and there making rain or snow by scratching himself.³ The Master of Life is thought by other tribes to dwell in the Rocky Mountains.⁴ The Mexicans thought that Tlaloc, god of rain, dwelt on the highest mountain-tops where the clouds gather. Other gods, his lieutenants, bearing his name, dwelt in hills and were worshipped as gods of water and of mountains. The cult of Tlaloc was of great importance, and was connected with festivals of the first rank.⁵ In Central India the sun-god is supposed to dwell on hills, and isolated rounded hills are hence called 'sun-rays.' Several outstanding peaks of the Himalāya are the seat of gods—Kailāsa of Śiva and Kūlera—and a title of Śiva is the 'mountain-god.' Other mountain chains or peaks are associated with divinities—e.g., the Vindhya ranges with Mahārāpi Vindhyaśwari, the goddess of the range. In earlier times Kudara was believed to dwell among the mountains, or on their tops, and Durgā was called 'the dweller in Mandara.'⁶ Manu is said to have descended on a slope of the Himalāya called 'Manu's Descent,' and to have tied his ship to a peak after the flood.⁷ As has been seen, there is a constant confusion between the mountains personified and the personal gods of mountains in India. In Greece certain gods were closely associated with mountains. The habitual cult of Zeus on mountain-tops, like that of the Mexican Tlaloc, shows his earlier connexion with rain, cloud, and lightning sent down from the heights, and he probably had been identified with and had absorbed similar earlier gods there worshipped—e.g., at Mt. Lykaion in Arcadia (Zeus Lykaeos). In several other instances the mountain where the cult took place gave a title to the god—e.g., Zeus Olympios (here the cult no longer was observed), Zeus Laphystos (Boeotia); on Mt. Pelion he was worshipped as Zeus Akraios.⁸ Clouds resting on peaks where Zeus as rain-god was worshipped were a sign of rain.⁹ Hermes had a temple on the summit of Mt. Cyllene, and Apollo on the hill of Phigaleia. Artemis was also worshipped on high places in Arcadia. The Cretan Mother-goddess, like the Phrygian Cybele (q.v.), was represented standing on a hill (cf. art. MOUNTAIN-MOTHER). Cybele was the Mountain-mother (ἄντρον οὐρεῖα),¹⁰ and she loved the mountain and its recesses, called by her name Κύβηλα.¹¹ Another divinity associated with mountains was Pan, who was born on Mt. Lykaion and had one of his sanctuaries there. Several mountains—e.g., Mt. Mænalus, Mt. Læmpea—were sacred to him. There he loved to hunt, and there he might be heard piping.¹² The personalized nymphs were also of the mountains, and were worshipped there. They had caves on Mt. Cithæron, and gave oracles from them. Certain nymphs, called 'Opeῖδæes' or 'Opeῖδæes', presided over mountains, and were companions of Artemis.¹³ Mt. Olympus was supposed to be the seat of the gods, with the palace of Zeus on its summit. In Cappadocia, according to Strabo,¹⁴ a mountain was called after a god Omanos. Some Babylonian gods were called 'ruler of the mountains,' and Enlil is described as 'the great Earth-Mountain'—a reference to Babylonian cosmogony and to the belief that he was god of all the forces of life. For his worship, and later that of all the gods, an artificial mountain was erected in the plain.¹⁵ The world-mountain was the seat of the gods. Among the Celts gods were associated with hills, where some cult was offered to them, or with mounds. Within these they were believed to have retired on the coming of Christianity, and there they live as fairies.¹⁶

For Berbers see *ERE* ii. 506.

3. Ghosts dwelling on mountains.—To some extent the belief that ghosts haunt mountains or that the Other-world of the dead is situated on a mountain-top may have arisen from the custom of burying the dead on hills, but the belief often exists where this custom is not found. It was doubtless connected with the fact that mountains are lofty and touch the clouds or are swathed at times in mists. They are near the sky-land which

is so often associated with the dead. They are lofty and mysterious; and, as they are the dwelling-place of gods and spirits other than human, it was natural enough to regard them as also the habitation of ghosts.

Burial on hills is only one of many methods of disposing of the dead, and is by no means universal. It is found among the Comanches, Arapahos, and other N. American tribes, the Caribs and Patagonians, in Arabia and Tibet, and among the Parsis where no *dakhma* exists (the body is surrounded by stones, not buried). Hill-burial was also favoured by the Norsemen.¹

In Melanesia the idea that ghosts dwell on mountains is frequently found—e.g., in British New Guinea (life like that of earth [Kaita]; a blissful Elysium [Aroma]; ghosts as a light or a fungus [Roro-speaking tribes]), and among the Kai of German New Guinea (ghosts as animals haunting wild glens). In the D'Entrecasteaux group is the spirit-mountain Bwebweso, the happy spirit-land which the ghosts reach by a snake-bridge over a chasm. No mortal dare climb it or speak above a whisper when passing it.² In Tahiti the heaven of the dead, Tamahani, is on a mountain on the north-west side of Raiatea, and frequently in Polynesia a mountain-top or rocky defile or the surrounding mists are the abode or resort of ghosts.³ In the Shortland Islands the dead go to certain mountains, and, after remaining there for some time, depart to a volcano.⁴ Among the Dayaks of Borneo hill-tops are associated with ghosts. The heaven of the Ikaans and other tribes is on the top of Kina Balu, and the ghosts feed on the moss on its sides. Among the Sea Dayaks a hero who becomes the object of a cult is buried in a lonely spot on the crest of a hill.⁵ Various African tribes have similar beliefs.

The Akanba think that ghosts dwell on hills, and that volcanic veins are their paths. Sacrifice is made to them there, and they fear to approach the hill among the woods of which the ghosts dwell.⁶ Among the Kagoro ghosts dwell in groves or on mountains.⁷ The Bondel god, Mlinga, is a mountain, and souls go thither, storms come from it, and in war drums are heard upon it. Death is the penalty for trespassing on it.⁸ The Anyanja hear the ghosts talking on their spirit-hill, or drums beating. To hear these is dangerous.⁹ Malagasy ghosts and animal spirits reside in a great mountain in the north.¹⁰

In N. America the Sonora Indians thought that ghosts dwell in caves and rocks, the echo being their voices.¹¹ Of other tribes it is said that souls of the dead go to Wakonkian, who dwells in the Rocky Mountains, and there live in bliss.¹² Tlalocan, a Mexican Elysium in the mountains, was the place of souls of those sacrificed to Tlaloc and of those who died of leprosy or by drowning or lightning.¹³ The Hindus regarded the Himalāya as the home of the sainted dead.¹⁴ One Chinese paradise is in the Kuen-lun mountains, and is for those who attain holiness or divinity; many tales are told of its wonders.¹⁵ Similar beliefs lingered on in the W. Highlands. Certain clans had hills 'to which the spirits of their departed friends had a peculiar attachment,' and which were supernaturally lit when a member of the clan died.¹⁶

In pagan Slavic belief the dead must climb a steep glass mountain, on whose top is paradise, and in *Marchen*, Scandinavian and Slavic, this idea reappears as the rescue of a princess or a fair being from the top of a glass mountain by a hero.¹⁷

The road which the soul has to traverse to the region of the dead is often a difficult one, and in some savage instances it passes over mountains, or the entrance to the Other-world is from a cave in a volcanic vent (see DESCENT TO HADES [Ethnic], § 1).

In Mexican belief the soul of one dying a peaceful death had to pass between two mountains which threatened to meet and crush him, if he were not armed with a passport.¹ Mt. Demavend in Persia was the resting-place of the blessed on their way to paradise,² and Mt. Albürz was one of the supports of the Chinvat bridge. In ancient Egyptian belief the 'Mountain of the West,' through which lay the road to the region of the dead, was guarded by Taftir or Ifathor, who is represented emerging from the mountain,³ where Râ also sits. At the tomb the coffin was set on a small sandhill, representing the mountain.⁴

Many folk-tales and myths tell of a deliverer, some *rex quondam, rex futurus*, like Arthur, who is one day to return as the saviour of his people.⁵ In some of these he is in fairyland or heaven, but 'the cruder and more archaic belief is that he sleeps within the hills.'⁶ Sometimes he is seen there by one who has been able to penetrate into the hill. Such tales are told of Arthur, Merlin, Fionn, Bruce, and many another hero, and there are innumerable Celtic, Teutonic, and Slavic instances.⁷ The story is also found in Korea.⁸ Hartland suggests that these heroes are gods of the earlier faiths, vanquished by Christianity but not destroyed.⁹ So in Irish myth the Tuatha Dé Danann had retired within the hills.¹⁰ But, while this is not impossible, the idea seems to be linked more directly with that of the dead being alive in grave or barrow or in hills (as in Scandinavian belief), whence they might come in the hour of their people's need.

4. Mountains as the abode of spirits.—Besides being the seat of gods, mountains are also peopled, like other parts of nature, by spirits, or are haunted by fierce demons.

In Australia Twanjirika is the mountain-spirit of the S. Arunta, and in the Lake Macquarie district Yaho lived on the tops of high mountains and was hostile to the blacks. The Arunta also fear spirits called *oruntja*, dwelling on a hill.¹¹ In British New Guinea the Koita dread a spirit living on a hill which they will not approach, but a spear made from a tree growing near it is peculiarly effective.¹² In Polynesian spirits people the mountains and are generally dangerous.¹³ The *yaku* of the Veddas people rocks and hill-tops, among other places, and are named from them. They send disease, and are much feared. Some of these *yaku* are spirits of the dead—of headmen or their wives. They also have a dangerous aspect—sending sickness or stealing children—and are placated by offerings.¹⁴ The Kayans and other tribes of Borneo believe in spirits manifesting themselves in parts of nature—e.g., mountains. Spirits of this kind are called *toh*, and are malevolent; hence people are careful not to offend them. The most dangerous are found on the most rugged summits, which the natives will hardly approach.¹⁵ Among the Lushai Kuki clans *lashi* are beings dwelling in precipices and controlling animals, but demons people hills, streams, etc., and cause much trouble.¹⁶ In Chitral bad spirits with feet turned backwards dwell on Tirich Mir.¹⁷ Among the Oraons every rock and natural feature is haunted by demons, and this is true of every part of India.¹⁸ The Himalaya is the dwelling of innumerable beings, its recesses the haunt of demons, its caves of witches and fairies. Other hills are equally infested and consequently feared. As early as Vedic times such beliefs are found, and in the *Mahābhārata* witches are said to live in mountains.¹⁹ In Korea the spirits of mountains are duly worshipped by sacrifices, and on every pass

is a shrine where prayer is made to them or an offering laid. They control tigers and give the hunter power to catch them.¹ In China mountain spectres are much feared, and evil spirits haunt mountains, their power being proportionate to the size of these. Only on certain days should mountains be crossed, and only after fasting and purification. The genii of mountains are more friendly and have a regular cult (§ 7).² In Indo-China the Thai believe in the *phi* dwelling on steep mountains, who have the power of imitating storms by night.³ In Annam female spirits or fairies called *chu vi* dwell in forests and mountains, and for each hill there are genii good and bad.⁴ Among the Bantu of S.E. Africa demons haunting mountains are much feared.⁵ On the other hand, the Awemba believe in guardian spirits attached to hills, etc., who send rain and fertility.⁶ For similar Berber beliefs see *ERE* ii. 500b. The Babylonians thought that evil spirits dwelt on mountain-tops.⁷ In Persia Demavend is the home of genii and demons,⁸ and wizards assemble there. It is a general Muhammadan belief that the mountains of Qāf, supposed to be the circular boundary of the earth, are the chief abode of *jinn* and *ifrīts*.⁹ European folklore makes hills and mountains one of the dwelling-places of elves, fairies, dwarfs, and similar beings,¹⁰ and the *deos* (demons) of Armenian folk-belief live in mountains,¹¹ while fairyland is often within a hollow hill (see art. FAIRY, § xi). So the Serbian *vilas*¹² and the Nereids of modern Greece haunt hills and mountains. Certain mountains were trysting-places of spirits, demons, and witches—e.g., the Horselberg, the Brocken, the Puy de Dôme, and innumerable others in every part of Europe, these gatherings probably being reminiscent of sacrificial rites in pagan times on the same spots.¹³

5. Sacred mountains.—Wherever mountains are personified or associated with gods or are the seat of a cult, their sacredness is obvious. But some mountains have a peculiar sanctity. Legend clusters thickly round them, and they are places of pilgrimage or sources of merit.

Among the Western Nandi there is a sacred hill called Chapelei, the hill to which the spirits set fire. Ghosts are supposed to fire the grass there annually, and no Nandi will go near it.¹⁴ In Japan Fuji-yama is the sacred mountain, regarded as a goddess or connected with a goddess of the same name.¹⁵ Pilgrims ascend its summit in vast numbers annually, and it is a frequent object of Japanese art. The Kwan-lun mountains are the sacred mountains of Taoism, and have given rise to numerous fanciful legends.¹⁶ In early Hinduism Mt. Mandara in Bihār was a kind of Olympus. It formed the stick with which the gods churned the ocean for ambrosia. But more usually Himavat (Himalaya) is the sacred mountain-chain, 'the divine mountain, beloved of the gods.' As has been seen, it is extolled as a god. There are many temples on it, and it is the object of innumerable pilgrimages. It is inhabited by beings whose mere presence adds value to the merit of the penances of ascetics (see also § i). Other mountains are sacred—e.g., the Vindhya range—an object of devotion and prayer, and have their temples or shrines.¹⁷ In ancient Persia Albürz or Hara Berezahti was peculiarly sacred, the first of mountains. The sun and stars revolved round it; light came from it and returned there; on it was no night or darkness, no cold, no wind, no sickness; on it the Amesha Spentas built a dwelling for Mithra, and he looks upon all the material world from it; below it was the Chinvat bridge. All mountains are said to have grown from its roots.¹⁸ In the Qur'ān Sāfa and Marwah are said to be 'beacons of God,' and pilgrims are advised to compass them about. Idols formerly stood upon them and were worshipped, but Muhammad ordered their destruction, though the visitation of the mountains is an important part of the Hajj rites.¹⁹ Mt Sinai was also regarded as sacred, and oaths were taken by it.²⁰ Among the Semites several mountains were sacred as the dwelling- or resting-place of gods or the

scene of a cult (§ 7). Sinai was sacred before Israel received the Law from it, and it is specifically called the mount of God in OT (Ex 31 427 2413, 1 K 19⁹). Several other sacred mountains are also mentioned there—Moriah, Nebo (perhaps originally the seat of the god Nebo), Hor, and Zion (Gn 22¹⁴, Dt 32⁴⁴, Nu 23²⁸, Is 24² 25⁶). The last remained sacred in much later times as the central seat of worship, and was regarded as God's holy mountain, the 'mountain of the Lord's house'.¹ In ancient times Mt. Atlas in Morocco was held in great reverence. Religious fear seized those who approached it, and the Libyans are said to have regarded it as a temple and a god, the object by which they swore, and a statue.²

In China mountains have a curious importance, especially the two groups of five already referred to and other sacred mountains. According to the doctrine of *feng-shui* (q.v.), every house, temple, field, etc., should be so situated that the beneficent influences of the universe may be freely exercised upon it. These influences are modified by the configuration of the earth. Hence hills intercept noxious influences—e.g., bad winds—or they send far and wide the beneficent influences of water, the chief element in nature; or they are bearers of heavenly influences to man; or, standing around a town, they symbolize the animals of the four quarters, and bring it prosperity. The shape of hills or of any part of them may also influence a village or its inhabitants for good or evil. Hence it is important to select a site near a favourable contour, or a hill or rock in which there is a beneficial combination of elements, as given in the books of geomancy.³ Similar ideas are found in Korea. Towns, houses, and graves must have their guardian peaks, and care must be taken to avoid or to counteract hostile influences from a hill. People are born according to the nature of the hill on which graves of ancestors are—e.g., a craggy hill denotes a warrior. There are currents or veins of influence in mountains, and prosperity depends on the proper circulation of these.⁴ In India it is held that mountains as well as rivers or temples are places which destroy sin, this being especially true of Himavat.⁵ In the *Laws of Manu*, however, it is said that a student who has completed his term is not to reside long on a mountain.⁶ In Zoroastrianism mountains are said to have been created by outgrowth from the root of Albürz, the first mountain, in 18 years, after their substance was formed in the earth during 1000 years. High mountains, being near heaven, are apt to become seats of heavenly beings. On the top of one Ahura revealed the law,⁷ and mountains are said by the Spirit of Wisdom to be moderators of wind, warders-off, rest-places, and supports of rain-clouds, smiters of Abriman and the demons, and maintainers and vivifiers of the creation of Ahura Mazda.⁸ Of 'him who goes to the lofty mountains' their glory is said to 'bless him and be friendly' (cf. Himavat, § 1).⁹ Some are said to have been made by Ahura Mazda.¹⁰ Yet their creation is connected in the *Bundahishn* with the rushing in of the spirit of evil,¹¹ and at the restoration of all things earth is to receive its original perfect state of a level plain, because mountains are the work of the evil spirit.¹² Even Albürz, whose summit supports the Chinvat bridge, will no longer exist.¹³ Perhaps also this conception accounts for the tabu in the *Sad-dar* against women after child-birth looking at a hill.¹⁴ J. H. Moulton regards this idea, so contrary to Parsi and Aryan notions of the sacredness of mountains, as one of the beliefs brought in by Magian influences, neither Aryan nor Semitic, and superimposed upon Zoroastrianism.¹⁵ A similar idea is seen in the description of the Buddhist paradise, Sukhāvati, which will be level and contain 'no black mountains nor jewel mountains, nor Sumerus, king of mountains, nor Chakravāṭas, great kings of mountains'.¹⁶ The friendly influence of the hills is especially marked in the OT, as is natural where so many of them were sacred, and Zion was in particular the seat of God's house.¹⁷ They are symbols of God's might, yet are subject to Him. They melt like wax before Him or smoke at His touch. They rejoice with the worshipper, or are bidden to do so, or they break forth into singing before the return of the exiles. They are symbols of God's righteousness; they bring peace and righteousness to the people.

6. Fabulous mountains. — As the preceding section has shown, actual mountains are often regarded in a mythical light—e.g., Albürz in Zoroastrian belief, Himavat in Hindu, Kwan-lun in Taoist. Some mythologies, however, have invented mythical mountains, mainly in connexion with cosmogony.

Among such is the Bab. 'mountain of the world' (§ 9 (b)). In Hindu and, more particularly, Buddhist mythology Meru or Sumeru, the abode of the gods, occupies a prominent place. It is the primeval and the chief of mountains, the 'golden mountain'. It holds fast the earth, yet it swayed at the coming of Buddha.¹ It is 84,000 miles high, and is surmounted by the heavens. Seven concentric rings of vast mountains surround it, with intervening seas. Between these and an eighth outmost ring are the four continents.² Round Meru the sun, moon, and planets revolve. In Tibet the Lamas offer to the Buddhas daily the universe in effigy; Meru is represented by a dole of rice in the middle.³ In Muhammadan belief the mountains of Qāf are believed to encompass the earth and its surrounding ocean like a ring, as Albürz was held to do in Zoroastrian belief.⁴ They are of green chrysolite, and are the chief abode of the *jinn*. Our earth is one of seven successive earths, rising above each other, and supported by a rock communicating with Qāf by veins or roots, the origin of earthly mountains. In Malay belief Qāf (which may=the Caucasus) is being bored through by people called Yāfū and Māfū, and, when they succeed, the world will come to an end. The Malays believe in the existence of a central mountain Mahameru—a borrowing from Hindu belief.⁵

7. Cult of mountains.—A cult offered to mountains or to divinities connected with them cannot be sharply divided from a cult on mountains, whether that is to such gods or to others. In some cases, no doubt, mountain-tops were selected for altars, shrines, or temples because of their supposed nearness to heaven—one seat of the gods.⁶ Here and there, however, the difference can be seen even in the same religion.

Among the Nandi, after harvest the people of each geographical division hold a feast on the top of a hill, and in drought people look to Tindiret or Chepusio hill every morning and say, 'Rain, Tindiret!'.⁷ The savage Malays of Malacca sacrifice to the mountain-spirits on the summits, make a wish, addressing the spirit, and then partake of the sacrifice. This may be done three times, if not successful; should a third visit fail, another mountain is visited.⁸ Among the American Indian tribes Bancroft says that a direct worship of hills was unusual, but there was a liking for hills and mounds as places of worship.⁹ The Thompson Indians, however, offered the first berries of the year to the mountains, an old man dancing and holding the offering up to them.¹⁰ The Mexicans worshipped mountains and mountain-gods, and, when no hills were available for temples, made artificial mounds, or *teocallis*, for worship. Effigies of the mountains were made of dough and eaten in connexion with human sacrifices to the Tlalocs and mountains.¹¹ Infants and hairless dogs were also sacrificed on high mountains.¹² In China from ancient times mountains and rivers share with heaven the reverence of the State. There are many historical notices in the sacred books of this or that emperor or king worshipping towards the hills or going to famous hills and sacrificing the appropriate sacrifices to them, usually to the five mountains (§ 1), or to the spirits of the hills.¹³ This was done on festivals, at the successful conclusion of war,¹⁴ or on the occasion of a progress through the kingdom. In this way rest was given to the spirits of the hills.¹⁵ Omission to sacrifice to any of these spirits was an act of irreverence, and the ruler was deprived of part of his territory.¹⁶ At Peking is the great altar of 'Empress Earth,' and here at the summer solstice, when sacrifices to heaven are made, the emperor sacrifices to earth's chief components—mountains, rivers, and seas. Similar sacrifices are offered to the ten mountains on other State occasions, as well as to the ranges dominating the site of the imperial mausoleums.¹⁷

In India from early times a cult has been paid to or on mountains (§ 1). The *Institutes of Vishnu* say that mountains are excellent places for performing *śrāddhas*,¹ and the *Gṛhyasūtras* speak of an oblation of butter made on a mountain to east or north.² The cult of sacred mountains, on which shrines or temples are commonly built, has already been referred to. Aboriginal tribes attach a high importance to this cult, and many sacrifices and rites take place upon hills and mountains (Santal, Korwas, Kols, etc.).³ In Korea people go once a year to worship the popular god of hills. Pilgrims ascend mountains for merit, and carry a pebble, which is placed on the heap at the top dedicated to this god.⁴ In ancient Persia there are frequent references in the sacred books to worship and sacrifice being offered to mountains 'glorious with sanctity,' or 'brilliant with holiness.'⁵ The mountains which give understanding are worshipped with libations, as part of the liturgical service.⁶ The *Yasna* mentions worship of Sraosha by Haoma on 'the highest height of high Haraiti,'⁷ and Herodotus speaks of the custom of ascending the highest peaks and offering sacrifices to Zeus, calling the whole vault of the sky Zeus, probably some Zoroastrian sky-god representing the primitive Indo-European god of the sky.⁸ In Greece numerous mountains were crowned by temples dedicated to some particular god, but no deity was so much worshipped on mountain-tops as Zeus, who from his heights was supposed to rule the world. The Greek cults on high places were of ancient date, and perhaps concerned gods supposed to dwell in heaven, rather than gods of the heights. In modern Greece monasteries often stand on the site of these ancient mountain-shrines.⁹

Pausanias describes the cult of Zeus on Mt. Lycæon. There was a mound of heaped-up earth for an altar with two pillars facing the rising sun. Here also and on Mt. Tmolus the priest performed certain rites for the production of rain.¹⁰ In ancient Anatolia festivals in honour of Cybele were celebrated on the tops of Ida and Berecynthus, where she was supposed to reside, and where the trees were sacred to her and never cut down.¹¹

Among the Samogitæ on a certain mountain-top there was a perpetual fire in honour of the god Pargn, who controlled thunder and tempest.¹² Among the Semites hills or high places were favourite places of worship, and are frequently referred to in OT in connexion both with pagan tribes or peoples and with Israel. Jahweh was commonly worshipped on high places, and was supposed to dwell there, according to an older stratum of thought, while Israel also offered sacrifice and incense on them to the local gods—the Bā'alm of hills—or other gods from time to time (cf. Hos 412, Jer 220 38 172, Ezk 2028, 1 K 117 1423 2 K 164 1710). For the Canaanite cults see Dt 123, Nu 3332; Moab, Is 152 1612; cf. Nu 2241-28. The references to the worship of Jahweh on high places, whether natural or artificial, are frequent—e.g., 1 S 71.17 6122, 2 S 1522, 1 K 84 18206, Jg 626, Dt 274.

Archæological research has discovered remains of many 'high places,' often on hills, and even now remains of temples and sacred groves are to be seen on Hermon and other mountains. On some mountains worship and sacrifice still take place, and circular enclosures of stone crown the summits.

Aaron has a shrine on Mt. Hor, and is supposed to visit it twice a week. Muhammadan saints have also shrines on hill-tops.¹³ In European folk-survivals from earlier paganism, ritual acts—e.g., 'hill-wakes' or bonfires at May-day or midsummer—often take place on hills.¹⁴

Many high places are probably artificial constructions.

The Bab. temple-tower (*ziggurat*) was an earthly copy of the world-mountain, and served the purpose of the worshippers, whose ancestors had been accustomed to worship on heights, gaining nearer access to heaven (cf. *ERE* i. 690b). The Mexicans and other American peoples built mounds, pyramids, or *teocallis*, where no hills were available for worship. Some of these mounds were of great size. On them sacred buildings were erected, and the higher these could be placed the more

sacred they seemed. *Teocallis* were also erected on high mountains. The mounds are found in the bottom lands, though occasionally on higher ground.¹

Heaps of stones, often dedicated to the local genius on the highest point of mountain-passes, to which every traveller adds a stone, are found in all parts of the world and at all stages of culture. The added stone may be an offering (in Ladakh the mountain-spirit is said to be offended if no stone is given²), or may carry off weariness (it is often alleged that weariness leaves the traveller when he offers it), or the contagion of evil, or it may drive away evil spirits, or it may be a materialization of the prayer made at the moment. See LANDMARKS, vol. vii. p. 794f.; *GB*³, pt. vi., *The Scapegoat*, London, 1913, p. 11 ff.

In all religions which have encouraged asceticism men have chosen to live a solitary life among mountains, partly because of their loneliness, partly because of their sacred associations. Their living there tended to increase the sacred aspect of some mountains.

In India Himavat has always been the resort of saints and ascetics.³ Buddhist monasteries in Tibet are often on almost inaccessible heights, like many in Eastern Christian regions. Taoist hermits have been fond of mountains,⁴ as also have Christian ascetics.

8. Symbolism.—Mountains are everywhere symbolic of strength and everlastingness (cf. the frequent phrase in OT 'the everlasting hills,' though compared with Jahweh they are as nothing). To the Hebrews they were symbols of Jahweh's righteousness, His kindness, His guardianship.⁵ In the *Yt King* a mountain is a symbol of resoluteness.⁶ The Bab. Bel is called 'the great mountain,' or 'the great Earth-Mountain.'⁷ The Zulus speak of their king as being 'high as the mountain,' or address him as 'Yon mountain,'⁸ and elsewhere 'mountain' is a title of honour.⁹ Buddha is said to be composed and firm as Sumeru, or he is called 'the golden mountain,' and he is illustrious among men as Sumeru among mountains.¹⁰ The name *montagne* was given to the extreme French Revolutionists, who occupied the higher part of the hall where the Assembly met.

9. Mountains in cosmogony.—(a) The creation of mountains is referred to in some cosmogonies.

In an American Indian myth they were made by the crow and the hawk from mud brought up by a duck.¹¹ In W. Australia one myth tells how they were made from a heap of roots which a man kicked in all directions.¹² A Maori myth describes how the mountains and valleys of New Zealand were carved out by the knives of Maui's brothers, and an Australian myth of the god Bunjil and his knife is like this.¹³ Scandinavian, Cochín-Chinese, and Orphic myths recount how the mountains were made from the bones of a giant or of Zeus.¹⁴ An Indian myth regards certain mountains as offshoots from the Himālaya, brought for Rāma when he was building a bridge¹⁵ (see also §§ 5, 6).

(b) As to the ordinary observer the sky seems near the tops of mountains, so many myths regard it as so near as to be easily reached from them;¹⁶ or, again, the mountains, real or mythical, support the sky or the heavens.

Mt. Atlas was formerly known as 'the Pillar of Heaven'.¹ In Bab. cosmogony the sky rested on the 'mountain of the world', i.e. the world itself conceived as a hemispherical mountain with gently sloping sides.² In Hindu and Buddhist cosmogony the various heavens are arranged on and above the mythical Mt. Meru in an ascending series (see Cosmogony [Buddhist], [Hindu]). Fragments of Celtic myth suggest that with the Celts also a mountain supported the sky—e.g., a mountain near the sources of the Rhone was called 'the column of the sun', perhaps bearing up the sky while the sun revolved round it.³ We may note the Greek myth of the Titans piling Mt. Ossa on Olympus, and Pelion on Ossa, in order to scale heaven.⁴

(c) In Hebrew story the ark rested on Mt. Ararat after the Flood (Gn 8⁹). So in Bab. myth the 'mountain of the land of Nisair' held the ship fast and did not let it slip, and on its top Utanapishtum offered sacrifice and incense to the gods.⁵ The Hindu flood-myth tells how the fish bade the seven *ṛṣis* bind the ship to the highest peak of Himavat. Manu descended from it on Himavat; hence the northern mountain is called 'Manu's descent'.⁶ (cf. DELUGE).

J. A. MACCULLOCH.

MOUNTAIN-MOTHER.—The Mountain-Mother is the only Greek divinity certainly known to be of pre-historic origin. In the accompanying figure we have a seal-impression of late Minoan style (c. 1500 B.C.) found at Knossos.⁷ It is of cardinal importance and embodies, indeed, nearly all that we certainly know of the Mother. She wears the typical flounced Minoan skirt, and,

Impression of signet-ring showing Mountain-Mother and pillar-shrine.

holding either sceptre or lance, stands flanked by guardian lions on the peak of her own mountain. To the left is a Minoan shrine with pillars and 'horns of consecration'—the symbols that connect her with plant and animal life, the pillar being only a shaped and stylized tree. The mountain stood for earth, and the earth is Mother because she gives life to plants, animals, and man. 'Earth sends up fruits, so praise we Earth the Mother' (Γᾶ καρπὸν ἀνέλει, διὸ κλῆΐετε μητέρα γαίαν) was the litany chanted by the priestesses of Dodona.⁸

On the seal figured here the Mother rules alone, with an ecstatic male worshipper before her, but on other gems a male divinity appears, sometimes descending from the sky. It is noticeable, however, that he is always young and manifestly subordinate. In Cretan religion the male divinity is sometimes a child, the necessary attribute of motherhood, sometimes a young man, and sometimes a sky-power fertilizing Mother Earth; but

⁸ Homer, *Od.* xi. 315 f.

always the Mother is dominant. This dominance of the Mother divinity is of prime importance, and is in marked contrast to the Olympian system of Homer, where Zeus the Father reigns supreme. The Mother- and the Father-cults are, in fact, characteristic of the two strata that go to the making of Greek religion—the southern (Ægean or Anatolian) stratum has the dominant Mother-god, the northern (Indo-European) the dominant Father-god, the head of a patriarchal family, who is, ostensibly at least, the monogamous husband of a subordinate wife. The northern religion obviously reflects patrilinear, the southern matrilinear, social conditions. A further distinction is of importance—the Homeric patriarchal Olympus is the outcome of a 'heroic' condition of society; it emphasizes the individual; it is the result of warlike and migratory conditions; the worship of the Mother focuses on the facts of fertility, and emphasizes the race and its continuance rather than the individual and his prowess. Mother-worship is of the group rather than of the single worshipper. We find the Mother and her subordinate son or lover attended always by groups of dæmonic personages—Kouretes, Korybantes, Telchines, Dactyls, Satyrs, and the like.

A further characteristic of this southern matrilinear group-worship of the Mother is that it is mystical and orgiastic. The mysteries all centre not on Zeus the Father, but on the Mother and the subordinate son—Demeter in Greece, whose daughter, Kore, is but her younger form, and Rhea or some other form of the great Mother; the Dionysos of the mysteries is son of the Earth-Mother. The reason is simple; mysteries are now known to be simply magical ceremonies, dramatic representations of birth, marriage, and death, enacted with a view to promoting fertility. Mysteries, in fact, spell magic, and the mysteries of the Mother stand again in marked contrast to the rational worship of the Olympian Father. In the Olympian system the worshipper approaches his god as he would his fellow-man, with prayer, praise, and presents; his action is rational and anthropomorphic, not magical, not mysterious, not orgiastic.

The mysteries of the Mother are based, like all other mysteries, on initiation-ceremonies, which have for their object to prepare the boy for adult life and especially for marriage (see INITIATION [Greek] and KOURETES AND KORYBANTES). Each young man, each member of the band of Kouretes, or grown youths, became by initiation not only the son but the prince-consort of the Mother; he went through a mystical and magical *τερός γάμος*.¹ This explains at once the expression used by Euripides (*Bacchæ*, 120), *ὁ θαλάμειμα Κουρήτων*. It also elucidates the confession made by the Orphic initiate, *Δεσποίνης δὲ ὑπὸ κέλπου ἔδην χθονίας βασιλείας*.² Marriage is the mystery *par excellence*. In the matrilinear worship of the Mother the series of consorts was perennial. In Crete the fructifying of the Mother was mimetic and dramatic; in some Asia Minor cults it was attended by the horrors of castration.³ In the *Cretans* of Euripides (frag. 472, Nauck) the mystic 'held aloft the torches of the Mountain-Mother' (*μητρὶ τ' ὀρεῖ δάδας ἀνασχόν*), the blazing torch being a familiar fertilizer and purifier of fields and crops.

To the Olympos of Homer—a product of the Achæan heroic age—the Mother was never admitted; even Demeter had there only a precarious footing. But in post-Homeric days, when north and south were fused, a place was found for her in a more elastic pantheon as Mother of the Gods.

¹ A. B. Cook, *Zeus*, i., Cambridge, 1913, p. 660.

² J. E. Harrison, *Prolegomena*, p. 668.

³ For an explanation of the practice see J. G. Frazer, *Adonis, Attis, Osiris*, London, 1907, p. 224.

She lent many of her sacred animals, attributes, and traits to the women-goddesses of Greece—to Hera her *lepōs γάμος*, and sometimes her lion, to Artemis her function as *πάρνα θηρῶν*, to Aphrodite her dove, to Athene and the Erinyes her snakes, to Demeter her mysteries. How far these several goddesses were indigenous forms of the Mother, how far they were directly immigrant from Crete, cannot certainly be stated, but undoubtedly the dominant Mother with the male attendant—e.g., Attis and Adonis—half son, half lover, is echoed in Hellenic mythology in the figures of the great patroness-goddesses with the heroes whom they protect, in Hera and Jason, in Athene and Perseus. The Mother has many names—Rhea, Cybele, Dindymene, Ma—but her functions remain the same; her characteristic attributes and sacred animals—lion, bull, and goat—vary with the culture and local surroundings of her worshippers. Cf., further, art. MOTHER OF THE GODS (Greek and Roman).

J. E. HARRISON.

MOURNING.—See DEATH AND DISPOSAL OF THE DEAD.

MOUSE.—See ANIMALS.

MOUTH.—In many ways the mouth is of importance from a religious point of view. It is that by which man speaks to the gods in prayer, or utters or sings their praises; many wind instruments used in sacred rites are blown by its means (see MUSIC); sacred things and persons are kissed with the lips, and the kiss has an important part to play not only in sexual but in social and religious life, while it has also a large folklore of its own.¹ Silence is sometimes even more important than speech with the lips in religion and magic as well as in social affairs.² Laughter is also a function of the mouth, and plays a large part in life, while it has likewise a ritual and folklore aspect.³ The *Bhagavad-Gītā* regards the body as 'the city of nine portals,' of which the mouth is one.⁴ Voice and breath are two of the immortal parts of the body, according to the *Satapatha Brāhmaṇa*, and it calls Indra the breath and Sarasvatī the tongue.⁵ On the lips sit the seven *r̥sis* (the senses), and the tongue is an eighth which communicates with Brahman.⁶ In the account of the creation of the different classes in the *Rigveda*, priests are said to be from the mouth of the primeval man.⁷ In the Egyptian *Book of the Dead* the god Anubis has charge of the lips, as other gods have of other parts of the body.⁸

Hell is often conceived in Christian literature and art as a monster with a vast mouth into which souls fall and are swallowed, as already Sheol in Hebrew thought (Fr 12; cf. Nu 1622c). In Scandinavian mythology Hel has also a gaping mouth. Mythology often makes night a monster which devours the light or the sun. Cf. Skr. *rajanīmukha*, 'the mouth of night,' evening.

1. The mouth and the soul.—Whether the soul is regarded as a breath, a mannikin, or a tiny

animal, the mouth is one of the orifices by which it may leave the body either during life or at death.¹ Popular sayings like 'to have one's heart in one's mouth' or 'the soul on the lips' illustrate this.² It is also seen in the precaution taken by the Hindus of snapping the thumbs to keep the soul back³ when any one yawns. The soul may escape from the mouth during sleep, as is illustrated by many tales where, in the form of a small animal, it has been seen doing so. By preventing its re-entering one can cause the death of its owner.⁴ At death, in the belief of many peoples, the soul finally makes its exit by the mouth. In the *Mahābhārata* (iii. 297) Yama opens the mouth of Satyavin while he sleeps and draws out his soul, which is afterwards given to his wife, who replaces it in his mouth. Ovid tells how Hylonomē applied her lips to those of the dying Cyllarus to prevent his breath leaving him.⁵ Homer says that life cannot return once it has passed the lips.⁶ On the frescoes of the Campo Santo, Pisa, the soul is depicted as a sexless child leaving the body by the mouth. Similar beliefs are common among savages and with the folk everywhere. Hence, where the soul as a ghost is feared, precautions are sometimes taken to prevent its egress from the mouth. The mouth and other orifices are forcibly closed or stopped up, as among the S. Australians, Itonamas and Cayuvavas (S. America), Malays, New Caledonians, and Marquesas Islanders.⁷ In some cases the jaws are bound for the same purpose, and it is possible that, where this is done merely to keep the mouth closed, its real origin may be traced here.⁸ The Ainu bind the mouth of a fox when killed first at a hunt, lest its ghost come forth and warn other animals of the hunter's coming.⁹

On the other hand, the desire of recalling the soul to the body gives rise to certain practices connected with the mouth. In China it is stuffed with things endued with vital energy, so that, if the soul returns, revival of the body may be aided and decomposition prevented. Among these are certain minerals, cowries, pearls, grain, and coins, and a ritual is prescribed for the purpose.¹⁰ Similar practices are found in Bali (gold ring on tongue), in Tongking (gold and silver in mouth), and elsewhere.¹¹ De Groot holds that the placing of a coin in the mouth of the dead had the same purpose. This practice is best known from its use among the Greeks and Romans, but it is also recorded in India (small pieces of gold in mouth, etc., or melted butter allowed to trickle down [Hindus]; coin, etc., placed with dead [non-Aryan tribes]), and among the Litu-Slavs and Teutons.¹² This has been generally regarded either as a fee for the ghostly ferryman, as held by Greeks and Romans themselves, or as part of a gift to the dead, or a commutation of such a gift.¹³ The Chinese practice, however,

¹³ A gold coin was put in the dead man's coffin in the W. Isles to pay the ferryman, but the reason is perhaps a classical borrowing (A. Carmichael, *Carmichaelia*, Edinburgh, 1900, II. 288).

throws new light on the subject, and points to a possible origin for the same practice elsewhere, though it came to be regarded otherwise.

To the same origin may be ascribed the practice of filling the mouth of the corpse with food before burial. This, often regarded as a sacrificial feeding of the dead, may have been intended as a means of recalling the soul, though each instance must be examined in its own context, and it must be admitted that quite different reasons are often given by those who practise this rite. Yet, if the dead used earthly food, this would keep them from eating the food of the Other-world, which binds the eater to that world. Thus they might be able to return.¹

It is found among the Thô of Tongking (*ERE* iv. 418*), some Papuan and Polynesian tribes, and the Badayas (de Groot, i. 357 f.). In the Panjab leaves of the *tulsi* plant and Ganges water are placed in the mouth as offerings to Yama, that he may be merciful to the dead (*PR* ii. 69). In S.E. India the Kumi fill the corpse's mouth with rice and rice-beer (T. H. Lewin, *Wild Races of S.E. India*, London, 1870, p. 230). At the funeral feast of the father among the Kukis food is placed beside him and his pipe is put in his mouth, and he is bidden to eat because he is going on a long journey (*ib.* p. 273). The ancient Persians dropped *haoma* juice, which produces immortality, or some pomegranate seeds into the mouth of the dying (*ERE* iv. 602b). With this may be compared the practice of putting the Host in the mouth of the dead, which was condemned at the 3rd Council of Carthage and at other councils and synods (J. Bingham, *Origines Ecclesiasticae*, London, 1823, v. 338, vii. 344).

Of course, if the dead are to be fed at all, it is most natural to place food in the mouth, and in some instances a tube connected with the mouth is made to protrude from the grave so that nourishment may be poured down through it.² Where head-hunting is practised, the heads or, rather, the spirits connected with them are often fed by having food placed in the mouth.³ The Egyptian ceremony of 'opening the mouth and eyes' was performed that the deceased might see and eat the food offerings and utter the right words in the right manner.

As a preparatory rite the mouth and eyes of the mummy or statue representing the deceased were rubbed with part of the food to excite the appetite. Then the *sem* priest addressed the deceased: 'I have set in order for thee thy mouth and thy teeth. I open for thee thy mouth, I open for thee thy two eyes. I have opened thy mouth with the instrument of Anubis, the iron instrument with which the mouths of the gods were opened.' Mouth and eyes were touched with this instrument, and Horus was asked to open the mouth of the deceased as he had opened that of Osiris. With another instrument the lips were touched so that right words might be spoken. Then the mouth was touched with other articles to give life and colour to the lips, and touched again so that the jaw-bones might be established; and, finally, food was then placed in the mouth.⁴

The establishing of the jaw-bones probably refers to an old custom of dismemberment. Various texts speak of restoring the jaw-bones and the mouth in the reconstituted body. The lists of the members of Osiris include lips, mouth, and jaw-bones,⁵ and there may have been an ancient rite of cutting out the jaw-bone and preserving it separately. This is done by some African and Melanesian tribes.

In Uganda the king's jaw-bone is cut out and preserved in a special house, where it is consulted as an oracle, as the spirit is supposed to attach itself to it.⁶ Widows among the tribes of

the Flood peninsula carry the husband's jaw-bone.¹ The Tamos of German New Guinea exhume the corpse after some months and with great ceremony remove and preserve the lower jaw. Similar customs are observed by other tribes of this region.² Again, the Saa (Solomon Islands) preserve it with the skull in a hollow wooden image of a fish or in the public canoe-house.³ In New Britain the jaw-bone is worn by a relative as a means of obtaining its owner's help.⁴

These customs are perhaps akin to that of making trophies of the jaw-bone or lips of enemies, as in Ashanti, Dahomey, Tahiti, etc. (see HEAD, vol. vi. p. 534b), if the purpose is to secure power over the ghost of the dead man.

The Egyptian custom should be compared with the 'way of purifying the three deeds'—body, mouth, and heart—as practised on the deceased by the Shingon sect in Japan.⁵ Among the Basoga the lips of the dead are smeared with oil.⁶

2. Hostile spirits and the mouth.—The mouth as a spirit-opening is naturally one which is exposed to the entry of hostile spirits which take possession of a man. In India *bhûts* are thought to enter by the mouth, and in Egypt in common opinion all kinds of evil spirits try to do the same. Various customs are more or less clearly connected with this belief, and have for their object the warding off of such noxious influences. Eating in private is one of these; uttering a charm or performing some ritual act after yawning is another; scrupulous teeth-cleaning, as with the Hindus, is a third; veiling the face is a fourth.⁷ Probably the wide-spread custom of knocking out or filing the teeth, usually at puberty, is also connected with these dangers at initiation to man's food.⁸ Though, from the savage point of view, tatuing the lips or boring one or both lips and inserting feathers or a wooden or metal plug, which is often increased to large dimensions, is regarded as ornamental, the origin of the practice is perhaps magical. The lip-ornament is a protective charm against spirits entering by the mouth door, or perhaps also against the escape of the soul. This custom is found among the Eskimos, Haidas, and other N. American tribes, and very commonly in S. America (the most extravagant use of it being among the Botocudoes), as well as among many African tribes.⁹

3. The mouth and the breath.—As the soul or life is so often connected with the breath—whether breath in general, or, as has been suggested, the last breath—which may be expelled by a sneeze or yawn, and which leaves the body finally at death,¹⁰ certain rites in connexion with the mouth have arisen. In some instances a relative receives the last breath into his own mouth, by application of his lips to the dying man's, or by a kiss.¹¹ The Alfoors, on the other hand, close the mouths of animals at a birth lest they swallow the infant's soul, and the mother and others in the house must keep the mouth shut.¹² The breath, again, may have life-giving properties. Hence the Eskimo *angekok* will breathe on a sick man to cure him or give him a new soul;¹³ or, as among the Bribri Indians, the medicine-man purifies a woman after

child-birth by breathing on her.¹ Healing by breathing or blowing upon a patient is also found among American Indian medicine-men and in Oriental countries. On the other hand, the breath as connected with the life may contaminate sacred objects. Hence these must not be breathed upon, or the mouth must be covered when one is near them.

In Timor the common people, in addressing the Raja, place the hand before the mouth, lest they profane him by their breath.² Among the Paisis the priest must cover his mouth and nose with a thick veil—the *pauidāna*—on approaching the sacred fire and other sacred objects.³ Giraldus Cambrensis relates of the sacred fire in the shrine of St. Brigit at Kildare that it must not be breathed on by those who tended it—probably an earlier pagan Celtic tabu.⁴ Similarly the *Laws of Manu* forbid the Brāhman to blow the sacred fire with his mouth.⁵ A tabu of this kind is found among the Balkan Slavs in connexion with the sacred house-fire on the hearth.⁶ Shinto priests have also to veil their mouths when cooking the sacrificial food, and so have the cooks in the Mikado's kitchen.⁷ Saxo Grammaticus tells of a shrine at Rugen so sacred that the priest might not breathe in it, but had to go to the door for that purpose.⁸ On the other hand, a Maori chief would not blow upon a fire lest his sacred power should pass to it and so to the food cooked on it, and then to the eater of the food, causing his death.⁹

The old custom of 'scoring above the breath,' i.e. making an incision on a witch's forehead to neutralize her evil power, may have been connected with the idea that her evil life-influence came forth with the breath.¹⁰ Saliva, as connected with the mouth, is at once a tabued thing and a source of danger and magic influences and also a safeguard—e.g., against witchcraft—as well as of use in healing rites (see SALIVA).¹¹

MUGGLETONIANS.—The followers of the London prophets, John Reeve (1608–58) and his cousin Lodowicke Muggleton (1609–98), were designated 'Muggletonians.' Both Reeve and Muggleton were originally Puritans, but Reeve became a Ranter and Muggleton dropped all public worship, being attracted by Boehme's writings and by the prophecies of John Robins and Thomas Tany. In 1651 Muggleton had inward revelations interpreting the Scriptures; Reeve had the same experience next year, and on 3rd–5th Feb. 1652 Reeve announced an audible commission urging him to rebuke Robins and Tany and constituting him the last messenger of the third and final dispensation, Muggleton being his 'mouth.' They were the two witnesses of Rev. 11, to announce a new body of doctrine and to declare the eternal destiny of individuals. By 27th July 1652 their *Transcendent Spirituall Treatise* was complete for publication. They declared that all succession had ceased for 1300 years, and, when challenged to prove their new commission, their last resort was to curse their opponents; a few accidents or deaths from fear established their credit. Being imprisoned for blasphemy in 1653, they issued two more pamphlets.

lets. Demands for new truth were met by Reeve laying down six principles, published 15th Aug. 1656, as to the person of God, person of angels, person of devils, condition of Adam at his creation and how he lost his estate, heaven and glory, hell and death. The same year a full exposition appeared in *The Divine Looking Glass, or the Third and Last Testament*, printed in the style of the A.V.

The leading doctrines run thus. Matter is eternal and independent of God; this earth is the centre of the universe, sun and moon being fixed in the firmament about as big as we see them. God is one and eternal, with a material body rather larger than human, clear as crystal. The One God came to earth as Jesus, entrusting the temporary charge of the universe to Elijah. Angels have spiritual bodies and rational natures; Adam's body was natural, and his soul spiritual. Eve, however, is the important person; one angel and one only fell; he tempted her, entered bodily into her, and there dissolved, whence was born Cain. Eve tempted Adam to carnal intercourse, and thence arose Abel and Seth. Thus in the world are two distinct races, cursed and blessed. The soul is mortal, generated with the body, and returning to dust, whence it shall rise with the body. At the resurrection each person shall be re-created where he died, the wicked lying immovable in eternal lonely misery.

Reeve died in 1658, and Lawrence Clarkson aspired to fill his place, publishing three works. At the Restoration Muggleton was abandoned by many, but he regained his influence, even over Clarkson. He added the new doctrine that God has ceased intervening in the world, so that prayer is useless. For the next few years he was at war with the Friends, till William Penn, in 1672, published his *New Witnesses Proved Old Heretics*. A second secession took place in 1670 in consequence of his Nine Assertions, but Alexander Delamaine and John Saddington vigorously supported him. In 1676 G. Sheldon found some followers near Ashford. Next year he was again indicted for blasphemy, pilloried, imprisoned, and fined. He then wrote his autobiography, and, though no new revelation came, he was highly respected during the rest of his life for practical counsel. An anonymous attack by Bishop J. Williams in 1694 was promptly repelled by Thomas Tomkinson, who, in 1699, published his correspondence and autobiography, under the title *Acts of the Witnesses*.

Though one early revelation was quite explicit, that the end of the world was imminent, belief persisted. Many works were reprinted in 1756, after Swedenborg announced a kindred system, and others were written. Then James Birch led a reformation back to the views of Reeve; but, in 1778, he claimed direct inspiration, so that a secession took place, known especially in Pembroke and Bristol, as well as in London till 1871. A revival occurred about 1829–31, resulting in a fine edition of the primary works in three quarto volumes; and *The Looking Glass* was reprinted even in 1846. Prayer and preaching not being practised, public worship was confined to reading the standard books aloud, and singing the *Divine Songs*; the chief reading-room was in New Street, off Bishopsgate Street. Since 1870 worship seems to have ceased, though annual meetings were held at Denby in Derbyshire within living memory.

W. T. WHITLEY.

MUHAMMAD.—1. Historical sources.—Muhammad († 7th June A.D. 632; called also Ahmad, and by poets Maḥmūd) Abū'l-Qāsim, sometimes

localized as Al-Tihāmī ('of the Tihāmah' [Mutannabbi, ed. F. Dieterici, Berlin, 1861, p. 331]), known by his followers as 'the Apostle or the Prophet of Allāh,' and also by numerous other names, variously estimated at 30, 300, or even 1000 (see the collection in Qastallānī's *Mawāhib Ladunniyyah*, Cairo, 1278, iii. 133-179), was the founder of the religious and political system called in Europe after him, but named by him Islām or Hanīḥism. The event in his life which furnishes his followers with an era, viz. his migration (*hijrah*) from Mecca to Medina, is fixed by synchronism with the Jewish Day of Atonement for 20th September, A.D. 622. That era was introduced several years after his death, and, indeed, for the purpose of arranging the events in his career, by his second successor 'Omar I. (Mubarrad [† 235 A.H.], *Kāmil*, Cairo, 1308, i. 325), whereas the calendar on which it is based uses a lunar year of 354 days, introduced by the Prophet near the end of his life. Since both the calendars and the eras previously employed in Central Arabia are only vaguely known, and the story of 'Omar implies that he had not before heard of an era (which perhaps is confirmed by the fact that the word used for 'era' signifies 'month-making'), accurate dating of events in the Prophet's life is impossible. There is, however, an allusion in the Qur'ān (xxx. 1) to the victory of Chosroes in the Nearer East, which took place A.D. 616, and this agrees with the tradition that Muhammad preached for some ten years in Mecca before his migration. Probably the earliest written account of him is that in the Armenian *Chronicle of Sebeos* (Armen. text, Petrograd, 1879, pp. 104-106; Russ. tr. by K. Patkanian, do. 1862, pp. 116-118), of the 7th cent.; it is very scanty, giving little more than the statement that he was an Ishmaelite who taught his countrymen to return to the religion of Abraham and claim the promises made to the descendants of Ishmael. His career may, therefore, be said to be known entirely from Islāmic sources, which contain no biography that is quite contemporary. The earliest work that was intended to be a chronicle of his life is that by Muhammad b. Ishāq (c. 150 A.H.), who composed his *Sīrah* ('Biography') for the 'Abbāsīd Khalīfah Maṣṣūr (136-158 A.H.=A.D. 754-775) at least a century and a quarter after the death of his subject. This work does not appear to exist in its entirety, though probably the bulk is preserved in the *Compendium* of Ibn Hishām († 218 A.H.) and the *Chronicle* of Tabarī († 310 A.H.). Its author was in communication with eminent members of the Prophet's family, but is said to have been a man of indifferent morals, besides being a Shī'ite and a Qadārī (believer in the freedom of the will); he employed versifiers to compose poems to be put into the mouths of the personages who figure in his narrative; and his credibility was otherwise impugned.¹ Contemporary with Ibn Ishāq was Mūsā b. 'Uqbah († 141), whose collection of *Campaigns* was studied in Cairo as late as the 15th cent., but of which hitherto only some fragments have been discovered (ed. E. Sachau, *SBAW*, 1904), and those of little value. Shāfi'ī († 204) quotes this author once for what is clearly an edifying fable (*Umm*, Cairo, 1321, iii. 100). Later by some fifty years is the work of Wāqidi († 204), which to some extent embodies the same materials as the work of Ibn Ishāq; and somewhat later still the encyclopædic work of Ibn Sa'd († 230), secretary of Wāqidi, on the Prophet, his family, and his followers. The memoirs or table-talk of the Prophet's associates were collected and tabulated (with infinite repetitions) by the jurist

Aḥmad b. Hanbal († 241), and the recollections of these persons, after being critically sifted, were arranged in the order of subjects for the use of lawyers by numerous authors shortly after this date, and by some considerably earlier. Very little of this material has historical value. In the main, then, our knowledge of the Prophet's career comes from the work of Ibn Ishāq.

There is reason for thinking that shortly after Muhammad's death some sketch of his life, comparable to the Christian *paradosis*, was communicated orally to those who embraced Islām, enabling them to understand allusions in the Qur'ān; but this is likely to have been brief, and statements in early law-books indicate that considerable uncertainty prevailed with regard to events of primary importance in the Prophet's biography. It is of interest that the Khalīfah 'Abd al-Malik (65-86 A.H.) wrote to 'Urwah b. Zubair (born 22) for an account of the battle of Badr, and his letter in reply is preserved by Tabarī (i. 1284)—as usual, not from a copy but from oral tradition. This personage was born twenty years after the event, and appears in treating the subject to have consulted the Qur'ān. Another letter of this jurist in reply to a question about the sense of the Qur'ān has the appearance of a conjecture as to its meaning rather than of a historical tradition (Tabarī, *Commentary*, xxviii. 24). The general suspicion of and objection to written matter other than the Sacred Book which prevailed prior to the foundation of Baghdād, and indeed for some time after, prevented the perpetuation of memoranda or memoirs which would have formed a secure basis for the biography. Although the work of Ibn Ishāq contains a certain number of ostensibly contemporary documents—e.g., letters and State-papers—their authenticity seems in every case liable to question, not only on internal grounds, but because different authorities are in disagreement about them. It is, indeed, clear that no official collection was ever made of Muhammad's correspondence, treaties, and rescripts; Shāfi'ī († 204), who appears to have made accurate search in Arabia, could find nothing in writing referable to the Prophet except the Qur'ān and one apocryphal document, of which he knew only by hearsay. Contemporary treaties, produced in ancient and modern times, have been shown to be fabrications by the anachronisms which they contain (see Yāqūt, i. 248).

The Qur'ān appears to be for the most part authentic, but those who collected it avoided chronological arrangement as much as possible, combining in the same *sūrah*s, or chapters, matter belonging to widely different periods. In order to use it for historical purposes the reader has to interpret it by Ibn Ishāq's biography; but there are many cases in which that biography appears to be conjectural interpretation of the Qur'ān. It is true that the commentaries on the latter, of which one on an enormous scale was compiled by the historian Tabarī in the middle of the 3rd Islāmic cent., profess to locate most or all of the texts; but, unfortunately, they give a variety of locations, and leave on the mind the impression that nothing was certainly known or remembered about the 'occasions of revelation' beyond what the texts themselves imply.

If, in spite of these considerations, the general trustworthiness of Ibn Ishāq's narrative is probably to be maintained, there are three reasons for this. (1) The practice ascribed to the second Khalīfah of assigning pensions to the Muslims, which varied with the length of time during which they had been members of the community, accounts for the existence of lists of fighters in various battles, and for the preservation of the chronological order of

¹ See Yāqūt, *Dictionary of Learned Men*, ed. D. S. Margoliouth, London, 1907 ff., vi. 399-401.

those battles, since each was followed by some accessions. (2) The biography rarely has recourse to the supernatural, and, when this element is introduced, it does not appear to affect the causation; where, *e.g.*, angels or the devil take part in battles, they do not really contribute to the result. (3) The character which the narrator ascribes to his prophet is, on the whole, exceedingly repulsive. To this may be added the fact that, although Ibn Ishāq wrote for an 'Abbāsid patron, he takes very little trouble to glorify his ancestor 'Abbās, whereas he paints a pleasing picture of Abū Tālib, the uncle of the Prophet, whose son 'Alī was the head of a family which also claimed to succeed the Prophet. Hence it is clear that this biographer has not as a rule yielded to the temptations which lead astray men in his position.

2. Life.—For the present purpose the briefest sketch of the Prophet's career, as Ibn Ishāq narrates it, will suffice.

It is not possible to throw any serious doubt on the location of Muhammad as a member of a numerous Meccan family, though the name of his father excites suspicion, since 'Abdallāh' (the equivalent of 'some one') is used at a later period as a substitute for an unknown name; perhaps it is in this case a substitute for a name of which the second element was that of a pagan deity. Few have accepted the suggestion of Sprenger¹ that the name 'Muhammad' itself was adopted by the Prophet when he entered on his prophetic career; for the name is found in pre-Islamic inscriptions, and its connexion with the prophecy Hag 27, 'and the desire (*hemdath*) of all nations shall come,' seems to be an afterthought; there is therefore no reason for supposing that this name or its variants had Messianic associations. According to the biography, the life of Muhammad falls into four periods. (1) For forty years he lived as a pagan at Mecca (which comes into history with his enterprise, not having been mentioned previously). At the age of twenty-five he married a woman much older than himself, who bore him one or more sons (who died in infancy) and four daughters. In his fortieth year he became the recipient of revelations, wherein the office of prophet was conferred upon him. (2) For three years he carried on private propaganda, winning some adherents in his own family, among his private friends, and among the humbler classes in the town. (3) For ten years he carried on his mission publicly in Mecca, for the greater part of the time under the protection of his uncle Abū Tālib, who was not a believer; after his death the mission had for a time to be transferred to Tā'if, until another protector could be found among the Meccan magnates. Meanwhile a temporary refuge had been obtained for the Prophet's persecuted followers in Christian Abyssinia. Towards the end of this period the continuance of civil war at Yathrib (Medina) suggested to some of the inhabitants the desirability of securing a prophet to settle their disputes. Muhammad was invited to undertake this task, and accepted; but he wisely sent his followers before him to Yathrib to serve as a bodyguard when he arrived; he himself escaped with difficulty from Mecca, where danger was anticipated from this move. (4) Once in Medina, he proceeded to organize his followers as an army, ruthlessly suppressed internal opposition, secured the alliance of various Arabian tribes, and started raiding the Meccan caravans. Involved in war with his former fellow-citizens, he inflicted on them a series of defeats, culminating in the capture of the city in the eighth year of his migration. By the end of his life he had imposed his doctrine on the whole of Arabia, exterminating the Jewish communities, with few exceptions, rendering the Christian communities tributary, and abolishing paganism.

So far as this career is that of a military and political adventurer, countless parallels could be adduced. A man who can organize an armed force and lead it to victory may rise from obscurity to autocracy anywhere. Probably every century of Islām has its tale of such personages. The 'Abbāsid, Fātimid, Buwaihid, Seljūq, and Ottoman dynasties all arose in this way; and in most of these the religious appeal played an important part. The success of the founders was clearly due not to the objective truth of the doctrines with which they were associated, but to their skill as organizers and military leaders. In Muhammad's case, owing to the amount of information which we possess about him, it is easier to analyze the qualities which produced success than where the records are scantier. In the first place, his ability to gauge the capacities of others was abnormal; hence in the choice of subordinates he seems to have made no mistakes. In the second place, he was thoroughly

familiar with the foibles of the Arabs, and utilized them to the utmost advantage. The stories of his successes as told by Ibn Ishāq indicate a complete absence of moral scruple; but they also show a combination of patience, courage, and caution, ability to seize opportunities, and distrust of loyalty when not backed by interest, which fully explain the certainty with which results were won. If his age is correctly recorded, and no events of great importance in his early life concealed, his military career began when he was over fifty; this seems astonishingly late, yet analogies, if not parallels, can be found. Surprise is also excited by the ease with which the Arabs abandoned their gods and goddesses, readily accepting the logic of the stricken field; for, though new prophets arose after Muhammad's death, there appears to have been no recrudescence of paganism. Yet to this, too, some analogies can be discovered. The fact of primary importance in the rise of Islām is that the movement became considerable only when its originator was able to draw the sword and handle it successfully. That he was summoned to Yathrib was doubtless due in part to the presence of a Jewish element in that community, intellectually further advanced than the Arab tribes, which at first evidently favoured this advocate of monotheism; that he was able to make the fullest use of that opportunity was due to his own ability. The only difficulties which are to be found in his career are, therefore, those which render all history difficult. It is impossible to say why one man should be more gifted than his fellows, or why opportunities should occur for the development of special talents.

According to the Qur'ān (xliii. 30), he was not a 'great man' in his city, and, if the words of xciii. are to be taken literally, he lost his parents at an early age, and at some period was poor and burdened with a family. The question whether he could read and write has been much discussed, and it is unfortunate that we do not know certainly whether those accomplishments formed the basis of education in Mecca when he was a lad; there is, however, some slight reason for supposing that they did. The evidence indicates that he could do both of them, but not well. Thus, when he records the charge made against him of copying the ancient history which he reproduced in the Qur'ān from dictation (xxv. 5 f.), he does not rebut it by the assertion that he could not write. The tradition makes him a tradesman, and can even name his partner and the goods in which he dealt. Some have tried to find evidence of this in the language of the Qur'ān, which undoubtedly takes metaphors from sale and barter, profit and loss; but whether it does so to a greater extent than other books may be doubted. Some stories say that he was employed by his first wife Khadijah in the conduct of a caravan; and others tell of him following this occupation early in life.

It is, on the whole, probable that he travelled in his youth, for, though the geography of the Qur'ān is vague, the descriptions of travel which it contains seem to be based on personal experiences. Moreover, the charge of ignorance which is repeatedly made against the people of Mecca is more likely to have been brought by one who had some acquaintance with a higher civilization.

3. Origins and development of system.—The tradition does, indeed, name precursors of Muhammad at Mecca, among them a relative of his wife who had either copied or translated a portion of a gospel. Since Christianity had made progress in both N. and S. Arabia, it is not unlikely either that missionaries had found their way to Central Arabia, or that travellers thence had had their curiosity aroused and made inquiries into the system. The phenomena of the Qur'ān on the

¹ *Das Leben und die Lehre des Mohammed*, i. 158.

whole render it improbable that any part of it is based on book-learning; for, though in one place the Psalms are quoted with fair accuracy (xxi. 105 = Ps 37²⁰), the nature of the references is ordinarily explicable only as the reproduction of hearsay. Thus it cites (liii. 37f., lxxxvii. 19) 'the Scrolls of Moses and Abraham' for maxims that are analogous to those occurring in the Prophets or the NT, though not quite identical with them; and the mode of quotation implies that the writer had a vague notion of the book cited, such as actual perusal would have corrected. Further, the form assumed by the proper names and the religious technicalities indicates a great variety of linguistic sources; for in these Ethiopic, Greek, Syriac, Hebrew, and perhaps other languages are represented. Some of the proper names are not at present traceable to any version of the Scriptures—e.g., Tālūt for Saul, 'Isā for Jesus. Moreover, from the manner in which the Biblical narratives are told it is difficult to imagine that the writer was acquainted with the continuous history of the Bible; he knows only stories out of it. All this points to the probability that Muhammad heard the stories from narrators of different nationalities, who translated them orally into Arabic, leaving on their hearer a decidedly vague impression, in spite of the fact that they interested him keenly. Besides the canonical books, various uncanonical works contribute to the matter of the Qur'ān, which, in addition, refers to prophets not mentioned elsewhere. The Prophet was charged with employing as mentor a resident in Mecca, and after the migration to Medina, where there were Jews, he may have been able to utilize the Biblical learning of one or other among his converts. But it seems probable that what was reproduced during the Meccan period had been heard from travelling companions or from Jews and Christians whom he had met in foreign parts.

Prior to his call Muhammad is said to have practised ascetic retirement on Mt. Hīrā, and for this an old technicality, *ṭahannuth*, is preserved, which is said to mean 'to acquire merit,' and certainly has nothing to do with the Heb. *t'hinnōth*, 'supplications.' The call itself evidently took the form of a command to read, which the Prophet reluctantly obeyed. The communications embodied in the Qur'ān were, according to the tradition, made to the Prophet and uttered by him in trance; he would wrap himself in a blanket and perspire copiously at the time. A certain number of these stories may be inference from *sūrah*s lxxiii. and lxxiv., where the Prophet is addressed as 'Thou that art wrapped up,' combined with *sūrah* xvi. (supposed to be the first revelation), where he is bidden 'read.'

The form of the utterances at times approaches verse, i.e. a series of sentences in which the same quantity and quality of syllables are reproduced, the termination of each unit being marked by rhyme, whereas more usually rhyme only, and this of a somewhat loose character, is observed. The relation of this Qur'ānic style to the verse and rhymed prose of classical Arabic is an enigma which cannot at present be solved. An artifice based on the recurrence of letters is obviously literary; i.e., it depends for its existence on the practice of writing, since only those who are accustomed to read and write think of their words as agglomerations of letters; to the illiterate the word, if not the sentence, is the unit. Indeed, in what is supposed to be the earliest revelation the deity is said to have taught with the *calamus*, or reed-pen. The existence of poets before the Qur'ān is attested by a *sūrah* which is directed against them (xxvi.) and a text in which the deity states that He had not taught Muhammad poetry (xxxvi. 69). If the

poetry which existed before the Qur'ān was analogous to the classical poetry, the people of Mecca cannot have been in the state of naive ignorance with which the Qur'ān credits them; yet the poetry which is ascribed to the Umayyad period—i.e. the second half of the 1st Islāmic cent.—is to a great extent clearly authentic, while its authors represent the continuance of a pagan tradition. With regard to rhymed prose, probably we have nothing in this style that is certainly genuine and older than the 2nd cent. of Islām. It is, however, a much easier performance than verse, though no less dependent on writing. Oracles are supposed to have been delivered in it by pre-Muhammadan wizards.

Now the respect of ignorance for knowledge is a well-attested phenomenon, displayed in the desire of the Prophet that Jews and Christians should not be molested in the exercise of their creeds. It is therefore unlikely that the poets and wizards who preceded Muhammad presented a higher stage of education; hence, according to natural sequence, the style of the Qur'ān would seem to come between such naive jingles as may have counted for versification in Arabia and the highly artificial products with which we meet in the Umayyad period. It would follow that all the pre-Islāmic poetry as well as all that ostensibly belongs to the time of the Prophet and his immediate successors is spurious; but, as has been seen, the spuriousness of that which is incorporated in the Prophet's biography is otherwise attested; and the most distinguished philologists of the early 'Abbāsid period, to whose labours we owe our collections of early poetry, were unscrupulous fabricators.

The Prophet, then, claimed to introduce literature into his native language, and the form was probably modelled on the quasi-poetic experiments which had preceded the Qur'ān. It is, however, very noticeable that in his lifetime his book resembled a newspaper in having a fluid rather than a stationary existence; it was as a whole continuous, but each number had ephemeral importance. The theory was gradually evolved that it was a reproduction of a divine archetype, first as a series of copies, then as a single copy. The complete development of this theory was not possible before the collection of the Qur'ān; and the Prophet himself never thought of attempting such an undertaking.

The difference between his first conception of a prophet and that current in ancient Israel, before the literary prophet had arisen, was perhaps not very great. The oracles were partly spontaneous, partly required for emergencies; their form differed from that of ordinary speech by the presence of an artifice; and the prophet delivered them in what spiritualists call 'the superior condition.' At times the oracles were supplemented by dreams. Further, the Hebrew prophet was a 'warner,' which is one of the epithets applied by Muhammad to himself; he foretold misfortunes, which, however, were ordinarily contingent, since it was his business to indicate the line of conduct whereby they could be averted. Muhammad's notions of prophecy seem to have been chiefly influenced by those cases in which the prophet also claimed to be the head of the community, its priest and its king.

Attempts have been made by Sprenger and others to specify the epileptic fits which in Muhammad's case ostensibly accompanied the revelations; but it is doubtful how far these are to be regarded as real occurrences. It is clear that he was a man of great physical strength, since his life as tyrant of Medina was spent in constant military expeditions, added to the cares of a rapidly increasing community, of which he was at once priest, legis-

lator, ruler, and judge. Yet we never hear of his health breaking down under the strain. The 'fits' seem to have been experienced only when they were required for the delivery of the revelations, and in no case to have interfered with his activities.

A message must have matter as well as form, and, when Muhammad became head of a State, his Qur'an served as government organ, containing rescripts and something like an official chronicle of important events, with comments upon them. But before the migration the matter was not so easily supplied. To a certain extent it reproduces narratives from the Christian Bible, which *ex hypothesi* could not have been known to Muhammad from books, and therefore must have been communicated to him by direct inspiration, and so are a proof of the miraculous character of the whole work. The chief purpose of these and of the other messages is to insist on the importance of obeying God's messengers implicitly.

It is not easy to say whether Muhammad had any desire to inculcate any particular doctrine, for there appears to be none which he was not prepared to abandon under political pressure, and the tradition represents his followers as far more attached than himself to the dogmas. The main doctrines of the early teaching are the future life, the unity of God, and the folly of idolatry. Since he ultimately retained in his system the kissing of the Black Stone (cf. *ERE* vii. 743*), it is difficult to treat the campaign against idolatry as quite serious. The doctrine of the future life was preached in the early days as a warning of the approaching end of the world and the Day of Judgment; yet he had afterwards to make the martyrs in his cause enter paradise at once, and his enemies enter hell immediately after death—a belief not easily reconciled with the former. According to Ṭabari, during the Meccan period he at one time, under stress, issued a revelation admitting the Meccan goddesses to his pantheon; and, though this text was expunged from the Qur'an, the apology for it, viz. that it was the devil's interpolation, remains (liii. 19–23, xxii. 51; see *ERE* vii. 150). He even consented at one time to erase his title 'Apostle of God' from a document, when it stood in the way of the ratification of a treaty. Even the formula with which the *sūrah*s and other documents commence shows clear signs of compromise: 'In the name of Allah the Raḥmān the Merciful.' Since the last adjective is an Arabic rendering of the second, which is Aramaic, used as a divine name by Jews and pagans, and in Arabic not an epithet, but a name, some mystery must lie behind the employment of this name with a translation following it. The tradition suggests that the name 'Allāh' was familiar to the Meccans, but not the name 'Raḥmān,' which, indeed, had been adopted by one or more false Messiahs. In certain parts of the Qur'an, however, it may be said to be dominant. This formula, then, was doubly accommodated to Meccan prejudices.

The tradition does not conceal the fact that the 'canons of Islām' were of slow growth; it is probable that the part of the programme which never varied was the restoration of the religion of Abraham. One of Muhammad's precursors, Zaid b. 'Amr, is represented as travelling with the view of discovering the religion of this patriarch, from whom the tribes of N. Arabia, according to Genesis, are descended. It is not probable that his name was known in Mecca before Muhammad introduced it; but in doing so he was treading on safe ground, since the 'people of learning,' i.e. Jews and Christians, were agreed about the relationship. If the tradition is to be trusted, the new system was called by the Meccans 'Ṣābism,' a name connected historically with Ḥarrān, where

a cult of Abraham is likely to have existed; the Ḥarrānians appear to have been called Ḥanpē, 'heathens,' by their Christian neighbours, and possibly this is the solution of the puzzling name 'Hanīf' applied in the Qur'an to the religion of Abraham, and synonymous with 'Muslim,' which, according to the same book (vi. 163), was a title invented by the patriarch. The Qur'anic tales about Abraham are traceable to the Jewish Midrash; what is chiefly known about his religion is that he was an iconoclast, and was not one of the *mushrikūn*, i.e. polytheists. When the Prophet decided to make the Meccan pilgrimage part of his system, he ascribed the building of the Ka'bah to Abraham and Ishmael (ii. 119 ff.), and brought the prayer-ceremonial into connexion with the former. It is probable, though not certain, that both that ceremonial and the fasting month are Ḥarrānian.

There is reason for thinking that, besides the prohibition of idolatry, the earliest form of Islām enjoined certain daily ceremonies which were afterwards developed and regulated until they became stereotyped as the five *ṣalawāt*; and it is not easy to dissociate from these the theory of legal purity, which, however, seems to have existed in parts of pagan Arabia, since some of the technicalities are found in Sabæan inscriptions. Of the actual growth of the ritual or liturgy nothing certain is known; the prayer which corresponds with the *Paternoster*, and is called the *Fātiḥah* ('Opener') because it is prefixed to the Qur'an, contains polemical references to Jews and Christians ('those who have incurred anger and those who go astray'), which point to a late period in the Prophet's career; for his hostilities with the Jews did not commence until after the migration, and those with Christians were some years later. Moreover, the prayer-ceremonies were connected with military drill, which is unlikely to have been required before the raising of an army was contemplated.

The other canons or main institutions of Islām—the pilgrimage, the fasting month, and the tax called 'alms' (*ṣakāt* or *ṣadaqah*)—belong to the Medina period, though they cannot be precisely dated. The establishment of the first indicates the Prophet's resolve to conciliate so far as possible the pagans of Mecca, and to abandon Judaism, which on his arrival at Medina he was inclined to adopt; it belongs to the same policy as that which dictated his making the Meccan temple the direction of prayer instead of Jerusalem (ii. 139 f.). The fasting month, whatever its origin, is evidently a military exercise; on the one hand, it accustoms the fighting men to endure privation, and, on the other, it trains them to turn night into day. The alms or income-tax of 2½ per cent is organized poor relief. An innovation which is at least as important as the canons, though it is not termed one, is the tabu on intoxicants (ii. 218, v. 92), which is said to have been introduced in the third year of the migration, and appears to belong to military discipline. There may, however, be some truth in the idea of W. G. Palgrave¹ that this tabu is definitely anti-Christian in intent.

It is probable, then, that the positive parts of Islāmic teaching belong to the period after the migration, and that these were largely suggested by the Judaism which the Prophet got to know there. His usual plan when he adopted institutions was to disguise the borrowing; but he also introduced serious modifications. Thus, in the case of the Sabbath he not only shifted the day from Saturday to Friday, but reduced the time when business might not be transacted to the period occupied by the mid-day religious service (lxii. 9 f.). Instead of the elaborate system of

¹ *Central and Eastern Arabia*, London, 1886, i. 428.

food-tabus which occupies so prominent a place in the Mosaic code, he adopted the minimum retained by the Council of Jerusalem, recorded in Ac 15, with the tabu on swine's flesh which some think was originally to be found in those regulations (ii. 168, v. 4, xvi. 116). He held that each of the communities (Jewish and Muslim) might eat the food of the other, and, indeed, went out of his way to record in the Qur'an what he supposed to be the Jewish rules on the subject (vi. 147).

From Christianity he appears to have taken very little in the way of either doctrine or practice. His first relations with Christians seem to have been friendly, and, as has been seen, during the Meccan period he is said to have found a refuge for persecuted followers at Christian Axum; at a later period he used eulogistic language of Christian monks whom the Qur'an had affected to tears (v. 85 ff.). He supposed (v. 116) the Christians to worship three deities, Allāh, the Virgin Mariam, and 'Isā, whom he identified with the spirit of God, but also called 'a Word' (iv. 169). When he became acquainted with the division of Christendom on the subject of the nature of Christ, he conceived that it was his mission to settle the dispute; it is noticeable that he fully accepted the Virgin-birth and the Ascension, though not the Resurrection, as he denied that Christ had been crucified; but he rejected with vehemence the doctrine of the divinity of Christ (xix. 17 ff., iii. 40 ff., iv. 156). Sprenger fancies that he horrified his Christian visitors by his *ḥarīm* as much as he shocked his Jewish subjects by his ignorance of the OT;¹ what is certain is that the embassy from Christian Najrān which waited on him in Medina, when his power was making progress in Arabia, ultimately eschewed religious discussion and resigned themselves to the payment of tribute.

4. Relation of system to paganism.—Comparison between Muhammad's system and that of those which it displaced in non-Christian Arabia is difficult owing to the fragmentary nature of our information about the latter. The name applied to the heathen Arabs in the Qur'an, *mushrikūn*, if it really means 'those who assign associates to Allāh,' would imply that these pagans were to some extent monotheists, i.e. recognized one Supreme Power; but it is curious that the subordinate deities are called 'their' partners, i.e. of their worshippers (vi. 138). It is likely that the communities had their tribal and local cults, the abolition of which was regarded as a preliminary for the political union of Arabia. In order to employ monotheism for a political and, indeed, imperialistic object the deity had to be treated as a tribal god, favouring one community and hostile to all others. The men whose accession to Islām after the migration led to its great military successes, especially Khālīd b. al-Walīd and 'Amr b. al-'Ās, appear to have had little or no religious conviction, but to have been moved by admiration for the Prophet's military and diplomatic skill, and anxious to serve under so able a chief. So far as religion entered into their consideration, they probably thought of the god of the community as leading it in war, and found the deity of the Muslim society able to defeat the others. More devout members of that society regarded the Prophet as able to call in the divine aid whenever he was in need of it. As the political programme increased, doctrine diminished in importance; and the institution of practices seems to have been based on the desire to give the new system the equivalent of what other systems possessed, in order that those others might have no rival attractions.

5. The Prophet's sincerity.—The question of

¹ II. 371

Muhammad's sincerity in his claim to be the spokesman or *ṛasūl* of the deity has often been discussed, and various views have been held on the subject; as examples we may quote that of Sprenger, who regards Muhammad's assertions on this subject as a case of epileptic mendacity,¹ while L. Caetani finds no contradiction between his supposed elaborate preparation of revelations and his ascription of them to direct communication from the deity.² The former view, as has already been seen, is scarcely tenable; nor does the latter correspond with the facts, for the revelations furnish little indication of elaborate preparation, and, when once delivered, they appear to have been neglected; there are, indeed, traditions of collections of revelations having been made by some of his followers, but it seems certain that Muhammad himself kept no such collection. Caetani's theory, however, is probably sound to this extent, that in Muhammad's case, as in those of many other men of vast energy and ability, there was a belief or consciousness of being directed by the deity, which, however, by no means led to his trusting anything to chance; and, while the angels whom he declared to have won his battles were partly pious, partly poetical personifications of the heroism of his followers, he was fully conscious of the value of attributing his victories to these supernatural auxiliaries; to be defeated by angelic cavalry was no discredit to any foe. He was also quite conscious of the value attaching to the right to dictate the moral law.

6. Moral reforms.—As a moral reformer Muhammad has to his credit the abolition of infanticide, which, if we may trust the Qur'an (xvi. 61 f., lxxxi. 8 f.), was commonly practised in Arabia in the case of female infants. On the other hand, serious evil was caused by his institution (v. 91) of compensation for oaths, i.e. the principle that an oath might be violated at the pleasure of the person who had sworn it, if he performed some sort of penance. While the Qur'an scarcely formulates any general principles of morals, it on the whole insists on *moderation*, and probably aimed at no considerable departure from current notions on these matters. Hence it tolerates polygamy and unlimited concubinage, and assumes the institution of slavery. In the matter of the blood-feud Muhammad did not contemplate complete abolition, but he endeavoured to mitigate its consequences and favoured mild reprisals (ii. 173–175). With the institution of private property and the acquisition of wealth he found no fault, and he deprecated extravagance in almsgiving as in other matters. The quality of personal courage he rated very high, and, though he often inspired it by the promise of paradise, it is clear that his followers were largely persons who required no such stimulus to make them brave. The ascetic morality afterwards taught by Sūfī preachers and, if the tradition is to be believed, approved by some of Muhammad's early adherents finds little support in any interpretation of the Qur'an that is reasonably literal, and clearly receives no countenance from the Prophet's own career, if any credibility attaches to his biography. Like other sovereigns, he claimed a large share of the booty won in his raids as his perquisite, and appropriated territory as his domain.

It is not clear, then, that Muhammad can be credited with any considerable reform except in the matter of infanticide, whereas in the subordination of the family tie to the religious brotherhood he appears to have weakened one social sanction without introducing any other equally strong by way of compensation. The history of this sub-

¹ I. 207 ff.

² *Annali dell' Islamo*, Milan, 1905 ff., I. 204 ff.

ordination can be traced in the Qur'ān rather more continuously than most institutions.

Where moral codes are drawn up, as is the case in several *sūrah*s, honour to parents is given a high place in the list of commandments. When Abraham is first introduced, he prays for his parents; then he becomes involved in a dispute with his father on the subject of idolatry, but promises to pray for him; and thus, when Abraham next comes on the scene, he actually does. But after the migration, when the younger generation were joining Muhammad against the wishes of their parents, such filial duty towards their unbelieving parents was thought undesirable; hence they are forbidden to pray for the latter, and Abraham's conduct is excused on the ground that he had made the promise; finally, Abraham himself is represented as repudiating all parental claims, and his conduct is declared exemplary except for his undertaking to pray for his father (xiv. 42, xix. 42-49, xxvi. 70 ff., xlii. 25, lx. 15, lx. 4).

This is only one example of the movement in the direction of intolerance which the Qur'ān exhibits as it proceeds. The Prophet undoubtedly wished to make Muslim life as sacrosanct within the Muslim world as in the old tribal system the tribesman's life had been within the tribe; but in this he failed, since his first followers eventually waged civil war with each other, and in the history of Islām the victims of massacres by Muslim Sultāns have frequently been Muslim communities, and, indeed, families claiming descent from the Prophet himself.

7. Toleration.—On the question of religious toleration the Qur'ān contains a series of utterances belonging to different periods, and varying from large-minded tolerance to extreme fanaticism. In one text (v. 73) future happiness is promised to four communities—believers, Jews, Sābians, and Christians—on condition of their believing in Allāh and the last day, and doing good works; in another the last three communities are mentioned with the pagans and the Mazdēans in a context which implies that the prospect before them is less satisfactory (xxii. 17). At times no form even of controversy is permitted except rivalry in kindness; elsewhere the Muslims are told to fight with other communities relentlessly until they accept Islām or pay tribute, which they are to bring in humiliation. Friendship with members of other communities is forbidden. The most intolerant utterances are the latest ones, but the progress in this direction does not seem to have been regular. The permission granted the Muslims to conceal their faith if confession is dangerous (iii. 27, as ordinarily explained) is characteristic of a system which is more political than religious. The ultimate system adopted was to permit the existence of communities which professed to follow a revealed book, but to disarm them and make them tributary; this condition is identified by some jurists with that of slaves. The existence of communities to which this description did not apply was forbidden. Since the chief Christian doctrine is said in the Qur'ān (xix. 92) to be so blasphemous as to be calculated to produce a general convulsion of nature, this toleration, though praiseworthy, is clearly illogical; for we can scarcely conceive a convulsion of nature being averted by the payment of a moderate poll-tax.

8. Legislation.—As a legislator Muhammad probably perpetuated current practice rather than introduced a fresh system, and the Qur'ān is on many grounds ill-suited for a basis of jurisprudence. It is imperfect, self-contradictory, and destitute of order. So far as any principle can be traced in its arrangement, the collector seems to have been anxious to avoid any semblance of chronological order, whence, in the case of conflicting enactments, it has to be supplemented by tradition. Where there is anything like systematic treatment of any topic—e.g., the laws of inheritance in *sūrah* iv.—the signs of improvisation are very apparent; and even a little consideration should have shown the barbarity and folly of the

punishment of hand-cutting for theft (v. 42). There is a curious tradition that on his death-bed Muhammad desired to frame a code for the guidance of the community; but to those who supposed that they had in the Qur'ān the actual word of God this utterance not unnaturally seemed delirious. The State, however, suffered very seriously for the want of guidance in the matter of appointing successors to the sovereign; and until the introduction of European codes it was never able to get rid of the doctrine that all law was to be got from the Qur'ān or the Prophet's equally inspired conduct, and so lacked the power to legislate on a sound basis.

9. Philosophy.—Though it is not probable that Muhammad had any liking for metaphysical speculation, the rôle which he had assumed rendered it necessary for him to formulate views on various matters which any form of religious propaganda brings to the front. The reduction of these questions and their answers to precise and philosophical form probably belongs to a later age, and, indeed, in the tradition Muhammad names sects which came into existence a century or more after his death; but in a vaguer form the Qur'ān deals with them, and so furnishes a basis for theology, though one of doubtful firmness. His theory of the deity is, on the whole, naively anthropomorphic; the Allāh of the Qur'ān has been compared to a magnified Oriental despot. A royal court is formed by the angels; Jibril conveys messages to the Prophet (ii. 91), whereas others are sent, mounted on horses, to fight the Prophet's battles (iii. 125, viii. 9, ix. 26, 40). Other intelligent beings are the *jinn*, or *shaitāns*, whose prince is Iblis; the second word is taken from the Ethiopic, the third from the Syriac transliteration of the Greek; the δ of δαδολος was mistaken for the Syriac sign of the genitive, somewhat as 'Oδδωρεα gets transformed into *Liber essentia*. To these the Prophet preaches (perhaps through a vague reminiscence of 1 P 3¹⁹), and some are converted (xvi. 28-30, lxxii. 1 ff.). Satan himself is the power that makes for evil, causes men to forget, and even interpolates the oracles of prophets. He has the divine permission to mislead mankind for a season (xv. 37-39). The Qur'ān, on the whole, seems to favour the theory of predestination, but there are passages which contradict it, and to those who impugn it an evasive answer rather than a rejoinder is given (see art. FATE [Muslim]). The resurrection of the body is taught in a crude form, and the future life is thought of as one of bodily pains and pleasures; hence metaphysical questions concerning the soul are scarcely touched. The creation is narrated mainly as in Gn 1, but with the addition of some apocryphal matter. The teleological argument for the existence of God is often emphasized.

10. The Prophet's apologists.—The distinction drawn in the case of the founder of Christianity by D. F. Strauss¹ between the historical and the mythical can be accommodated to that of the founder of Islām, though as regards Muhammad we have not so much to sift canonical documents as to contrast the impressions left by the biography of Ibn Ishāq with the character of the Prophet as it appears at later periods of Islām. That biography, as will be seen, left room for some important supplements and called for modification in certain respects.

The character attributed to Muhammad in the biography of Ibn Ishāq is, as has been seen, exceedingly unfavourable. In order to gain his ends he recoils from no expedient, and he approves of similar unscrupulousness on the part of his adherents, when exercised in his interest. He profits

¹ *Das Leben Jesu für das deutsche Volk bearbeitet*, Leipzig, 1864, p. xxiv.

to the utmost from the chivalry of the Meccans, but rarely requites it with the like. He organizes assassinations and wholesale massacres. His career as tyrant of Medina is that of a robber-chief, whose political economy consists in securing and dividing plunder, the distribution of the latter being at times carried out on principles which fail to satisfy his followers' ideas of justice. He is himself an unbridled libertine and encourages the same passion in his followers. For whatever he does he is prepared to plead the express authorization of the deity. It is, however, impossible to find any doctrine which he is not prepared to abandon in order to secure a political end. At different points in his career he abandons the unity of God and his claim to the title Prophet.

This is a disagreeable picture for the founder of a religion, and it cannot be pleaded that it is a picture drawn by an enemy; and, though Ibn Ishāq's name was for some reason held in low esteem by the classical traditionalists of the 3rd Islamic cent., they make no attempt to discredit those portions of the biography which bear hardest on the character of their Prophet. The theory that this person's conduct was a model for his followers has in consequence done serious mischief.

Apologies for Muhammad were started in the 18th cent. by H. de Boulainvilliers,¹ who was favoured by Gibbon because this apology provided some instruments against Christianity. More importance was attached to the lecture of Carlyle on 'The Hero as Prophet,' incorporated in the collection called *On Heroes and Hero-Worship* (London, 1841), in which Muhammad was taken as the type of a heroic prophet, just as Odin was made the type of a heroic divinity, the author's knowledge of the two personalities being about equal. Another apologist who acquired some popularity was Bosworth Smith,² who, too, was satisfied with superficial and second-hand information, and committed the error of basing his estimate of Muhammad's character and aims on the ill-recorded Meccan period instead of on the far more accurately chronicled period of Medina. No European apologist for Muhammad seems to have possessed any proper acquaintance with the Arabic sources. Only after the definite assertion of European superiority over the world of Islām, which may be dated from the Napoleonic invasion of Egypt, and the acquisition of European nationality or its equivalent by large numbers of Muslims, has the necessity for apologies made itself felt in Muslim communities. The most prominent writer on this side is Syed Ameer Ali,³ but there are many others. These apologists endeavour to discredit the biography of Ibn Ishāq where it shocks the European reader; and, where this cannot easily be done, they suggest honourable motives or suppose the course followed by the Prophet to have been the least objectionable of those that were open to him at the time. Thus his toleration of polygamy is declared to have been a limitation with the view of ultimate suppression, and his attitude towards slavery is regarded as similarly intended to lead to its abolition. He has even been made to set an example of monogamy, but the ingenuity required for this is so great that the result is unconvincing.

But, while Muslim dogma, by assuming that whatever the Prophet did must necessarily have been right, renders apology unnecessary, from the earliest times there has been much edifying fiction in which the Prophet is shown to have practised all the virtues which mankind agree in admiring. The lines on which the historical character has

been distorted and a mythical character substituted have in the main been three.

(1) In the Qur'ān Muhammad on the whole disclaims the character of thaumaturge, arguing that his predecessors were ordinary men, though he accepts the most important of the miracles ascribed to Moses, Jesus, and others (*e.g.*, vii. 160, iii. 43). The miracles which he claims are victories in the field, won by the assistance of angels, and the Qur'ān itself, which is a miracle either as containing historical matter to which the Prophet had no natural access or as being of unattainable eloquence (*cf.* xvi. 1 ff., liii. 1 ff.). To these it is possible that one case of foretelling the future, viz. the recovery by the Romans of the territory seized by the Persians in the Nearer East (xxx. 2 f.), should be added, though the text of the Qur'ān does not insist on this as evidence of mysterious knowledge. Since the miracles of earlier prophets are attested by the Qur'ān, this scarcity of the miraculous doubtless from the first constituted a serious difficulty to Muslim controversialists, and it is likely that in Muhammad's lifetime many miracles were attributed to him which he did not himself claim; in time he was credited with the analogue of every miracle of consequence in either OT or NT, with the exception of raising the dead, which perhaps was not ascribed to him on the ground that his own resurrection never became a dogma of Islām. In works of the 4th cent. of Islām these miracles are collected and, as is usual in Muslim works, attested by chains of witnesses, under the title 'Proofs of the Mission.' The most frequently narrated of these miracles is the 'splitting of the moon,' for which it seems possible to adduce Qur'ānic attestation (liv. 1), though perhaps the text should be taken hypothetically rather than as an assertion. Another form of miracle which was popularly attributed to him was foretelling the future; even the reverse which he sustained at Uhud was, according to the tradition, revealed to him in a dream, though the official account of that affair in *sūrah* iii. 133 ff. makes no allusion to the warning. Of marvellous experiences that which has attracted most attention is his supposed 'ascent into heaven,' which grew up round a text of the Qur'ān (xvii. 1), which merely says that God took His servant by night from the sacred place of prostration to the furthest place of prostration, usually supposed to mean from Mecca to Jerusalem. It is probable that this is the dream to which reference is made in the same *sūrah* (xvii. 62), where it is coupled with 'the accursed tree in the Qur'ān' as a temptation to the people, *i.e.* a stumbling-block to those whose faith was weak. Nothing more is known of this 'dream,' of which we should gather that the Qur'ān had contained an account which was afterwards expunged; but in the tradition it has been so expanded as to form the analogue on the one hand of the Christian Transfiguration, on the other of the colloquy of Moses on Sinai. There is even a tendency to ascribe to this ascent into heaven such non-Qur'ānic legislation as is generally adopted by Islām, in the same way as analogous Jewish legislation is called 'rules given to Moses on Sinai.' In the story that the Prophet was transferred from Mecca to Jerusalem and from Jerusalem to heaven we probably have a combination of glosses on the expression 'the furthest place of prostration,' the meaning of which is obviously obscure.

(2) The Prophet's sayings and doings were made into a source of law, corresponding with the Oral Law of the Jews, and, like the latter, not at first written down. The great collections of these precedents or rulings date from the second half of the 3rd Islamic cent., but their accumulation goes back to the 1st cent. of the migration, when the

¹ *La Vie de Mahomet*, London, 1730.

² *Mohammed and Mohammedanism*, London, 1873.

³ *Life and Teachings of Muhammad*, London, 1891.

system of jurisprudence began to be established by the labours of jurists of Medina. The impartial criticism of these traditions seems to lead to a purely negative result; the practice of inventing scenes in which the Prophet delivered some judgment or of fathering sayings upon him was so common from the very beginning of the Islāmic empire that any genuine sayings of his are inextricably mixed up with such as are apocryphal. The native criticism of this tradition consisted in ascertaining if possible the credibility of the persons who had handed it down. This was by no means easy, and various motives prevented those who endeavoured to criticize it from exercising their judgment freely; hence the chains which are technically regarded as strong appear to the non-Muslim critic fatally weak. The Prophet's merits as a legislator must, therefore, be judged exclusively by the Qur'ān; for, though the rest of the 'sacred code' is ascribed to him, there is little reason for thinking it to be his.

(3) The Prophet is supposed to have expressed opinions upon all sorts of subjects—*e.g.*, medicine—and writers of essays usually start by quoting these dicta. Those which have to do with the commendation of various virtues or the condemnation of vices were collected on a considerable scale by Ghazālī († 505 A.H.) in his *Revival of the Religious Sciences* (Cairo, 1282 A.H.), the standard text-book of orthodox Islāmic theology; he was, however, criticized severely for employing so many spurious dicta, many of which could be traced to fabricators.

11. *The Prophet's Companions.*—No account of Muhammad, however brief, could omit all notice of his Companions, the persons by whose instrumentality he accomplished so much. Many of these became historical figures, as sovereigns, governors, or generals; it is remarkable that none of them undertook the office of biographer or even collector of memoirs. The tradition implies that certain institutions were suggested to the Prophet by one or other of these adherents; but there is no evidence that he was seriously influenced by any one of them, and we should gather that their attitude towards him was that of worshippers. Although the later parts of the Qur'ān approach the character of official documents, and we actually have a State paper inserted in *sūrah* ix., it is not clear that these associates had any share in their composition. Indeed, such participation would have been at variance with the theory that the *sūrahs* were direct communications from the deity. The tradition represents Abū Bakr and 'Omar, both of whom gave their daughters to the Prophet, as the innermost cabinet; the former is said to have been regularly in favour of mild, the latter of severe, measures. Of emissaries sent to teach we hear very little; an agent was sent to Medina to prepare for the arrival of the Prophet, but the duties of this person were probably political, at least as much as religious; and, when the policy of winning the Arab tribes had commenced, missionaries were sent to teach neophytes those portions of the Qur'ān which were to be employed in the liturgy; these missionaries appear, however, to have had in part military character. When the time had come to extend the mission outside Arabia, envoys were sent bearing copies of the Prophet's letter to all monarchs known to him; but, as these contained a command to adopt Islām on pain of being attacked, there was no occasion for the messengers to endeavour to persuade.

The theory that Islām is primarily a political adventure is borne out by the subsequent careers of its most distinguished adherents. They accumulated fortunes, and otherwise obtained conspic-

uous worldly success; 'Omar is credited by some historians with consummate statesmanship, and several others displayed talents as commanders of armies; but there was much rivalry for the first place, and a quarter of a century after the Prophet's death different groups of Companions led armies against each other. The later legend transforms all of them into saints and preachers, and sometimes into ascetics. This is done in particular in the case of 'Alī, of whom a sort of cult arose, especially in Persia; history, however, presents him as an ambitious libertine, endowed with personal courage, but little else that merits admiration.

12. *His domestic affairs.*—The women of the Prophet's family enter into the story of his career somewhat as they enter into the subsequent history; the tradition makes the first wife, Khadijah, a woman of wealth, whose acceptance of her husband's claim to a supernatural mission was an important element in determining its success. Her death is said to have occurred shortly before the migration. Since his followers at Mecca were at least to some extent persons who required temporal support, it is likely that her wealth (whatever that term may have meant) was devoted to this purpose and, indeed, consumed therein. After her death the Prophet began that course of polygamy and concubinage which has given offence to European students of his career, but does not appear to have scandalized his Arabian contemporaries, except, indeed, in the case of his marriage with the wife of his adopted son, which is defended in a Qur'ānic revelation (xxxiii. 4). On two other occasions the pages of the sacred book are devoted to the Prophet's domestic troubles—once when his girl-wife 'Aishah had incurred the suspicion of unfaithfulness, and was defended by a special oracle (xxiv. 11 ff.); and another time, when, owing to the introduction of a Coptic concubine to the *harem*, the remaining members of it were so embittered that the Prophet threatened to divorce them all, and the revelation which he produced assured him that he would be able to find adequate substitutes (lxvi. 1 ff.). Since matters no less private and delicate find a place in the prophetic books of the OT (Hosea and Isaiah), perhaps their presence in the Qur'ān ought not to shock us; nevertheless the tradition states that, according to 'Aishah, the Qur'ān would have profited by the omission of the affair of the adopted son, and this criticism might be extended to the others. In several of these marriages it is easy to see that political considerations were dominant. Muhammad, like other leaders, wished to unite his chief helpers to himself by as many bonds as possible, and to get a hold on dangerous opponents. Had he had sons, he would probably have utilized them in the pursuit of this policy. Of these women 'Aishah, the daughter of his most faithful follower, Abū Bakr, played a historical part of great consequence, and in the first civil war herself took the field. The descendants of the Prophet, distinguished since the year 773 A.H. by green turbans, all trace their pedigree to Fāṭimah, his daughter by Khadijah; the other daughters appear to have died without issue. Fāṭimah herself, the wife of 'Alī, seems to have been cruelly treated by the first successor, and died six months after her father, being called to play a political part for which she was unfitted in supporting her husband's claim to the succession. It is curious that the exact number of his sons is unknown, though it is certain that all died in infancy. Of one, born late in his life of a Coptic concubine, sent as a present by the Byzantine governor of Egypt, the death synchronized with an eclipse of the sun, supposed to be that of 27th Jan. 632.

LITERATURE.—This, in both the Islāmic and the Christian languages, is enormous, and even a list of important works would be lengthy. Besides the sources enumerated above, the Islāmic general histories mostly devote a great deal of space to the Prophet's biography—e.g., *Ismā'īl Abū'l-Fidā* († 722 A.H.), whose account, ed. with Lat. tr. by J. Gagnier, Oxford, 1723, was for more than a century the basis of European researches. Many Arabic monographs in prose and verse are enumerated by Ḥajjī Khalifah, ed. G. Flügel, Leipzig, 1836–68, lii. 634–636. To these should be added the work called *Inṣān al-'Uyūn* of Burhān al-dīn al-Halabī († 1044 A.H.), published Cairo, 1292, with the biography by a modern writer of Mecca, Aḥmad Zāinī Dahlan, on the margin. The modern European study of the subject was started by G. Weil, *Mohammed der Prophet*, Stuttgart, 1843; it was popularized in English by Washington Irving, *Life of Mahomet and his Successors*, London, 1850. The work of A. Sprenger, *Das Leben und die Lehre des Mohammed*, Berlin, 1889, claimed to be based mainly on new materials; much the same were simultaneously employed by W. Muir, *Life of Mahomet and Hist. of Islam*, London, 1856–61, reprinted in an abridged form, 1877, and ed.

T. H. Weir, 1912. More recent biographies are those by H. Grimme, *Mohammed*, Munich, 1904, and D. S. Margoliouth, *Mohammed and the Rise of Islam*, London, 1905.

Besides biographies, numerous works deal with either the prophetic character of Muhammad or certain aspects of his work. One of the most popular of the former sort is the *Shifā fi ḥuqūq al-Mustaḥab* of the qādī 'Iyād († 544 A.H.), on which there is a vast literature, described by Ḥajjī Khalifah, iv. 56–61; the ed. of Constantinople, 1816, in 4 vols. with the commentary of Khafajī († 1009 A.H.), is probably the best. Somewhat similar is the *Mawāhib Laduniyyah* of Qastallānī († 923 A.H.) with the commentary of Zurqānī, 8 vols., Cairo, 1278. Of European works mention may be made of O. Pautz, *Mohammeds Lehre von der Offenbarung*, Leipzig, 1898; O. Procksch, *Über die Buttrache und Mohammeds Stellung zu ihr*, do. 1899; P. Casanova, *Mohammed et la fin du monde*, Paris, 1911; H. Lammens, *Mohamet, fut-il sincère?*, Paris, 1914. The ninth volume of V. Chauvin's *Bibliographie des ouvrages arabes*, etc., Liège, 1905, contains a list of all European works on the subject from 1810 to 1885.

MUHAMMADANISM (in Central Africa).—Muhammadanism is said to have reached Central Africa from three sources—Egypt by the Nile and its affluents, Tripoli *via* Ghadames to Timbuktu, and Algeria *via* Wargla. Certain details of the dates of its introduction into various communities were collected by the traveller, H. Barth; about A.D. 1000 it found its way into Songhi, near the end of the 11th cent. into Kanem, about 1500 into Bagirmi, and not much later into Katsena. It was introduced into Logon about the beginning of the 19th century. In 1907 it was computed that the number of indigenous Muslims in British Central Africa was 50,000 as compared with 950,000 fetishists. Its introduction in certain places is connected with the names of historical personages; the chief missionary for Central Negroland was one Muhammad b. Abd al-Karīm b. Maghili, a native of Buda in Tawat, who flourished about 1500.

The Islām of Central Africa seems to be everywhere of the Mālikite school; and, if it has produced a literature, few monuments of it have as yet come to light. In *Revue du monde musulman*, xii. [1910] 197 Isma'īl Hamet gives a summary of the *Kitāb al-Ṭarḍif* by Muhammad b. al-Mukhtār of the Kounta tribe of Azawad; this personage died in 1826, twenty years after the completion of his work, which consists of an edifying biography of his parents, containing the kind of matter which is usually found in hagiographies. In *Revue du monde musulman*, xiv. [1911], Hamet gives extracts from the works of a somewhat earlier writer Sidi Muhammad al-Yaddālī († 1752), a poem by whom in praise of the Prophet was published by L. Massignon (*ib.* viii. [1909] 199). Some contemporary poems (satires) by one Bakai were published by Barth. There appears to be nothing in these specimens that is distinctly African. In the same magazine (viii. 409) Massignon published the catalogue of a library belonging to a Central African chieftain Shaikh Sidia; the editor notices the absence of books bearing on philosophy, alchemy, and music, but otherwise it does not differ in character from other Islāmic libraries, and the want of representation of these subjects may be due to accident.

LITERATURE.—I. Hamet, 'La Civilisation arabe en Afrique centrale,' in *Revue du monde musulman*, xiv. [1911] 1–35.

D. S. MARGOLIOUTH.

MUHAMMADANISM (in N. Africa).—I. History.—The introduction of Islām into N.

Africa commenced shortly after the conquest of Egypt by 'Amr b. al-'Ās, who in A.D. 641 penetrated as far as Barca, and in the following year took Tripoli by storm. It was not till the autumn of 647, however, that an expedition on a great scale was organized for the subjugation of Africa, where the Patricius Gregory had declared himself independent of the Byzantine emperor, and made Sbeitla (in Tunisia) his seat of government. The Arab invader, 'Abdallāh b. Abī Sarh, who had advanced through the interior, defeated the forces collected by Gregory in the battle of Akuba, where Gregory himself perished, took and pillaged Sbeitla, and proceeded to devastate the country southwards as far as Gafsa and Jerid and northwards as far as Marmajanna. Permanent occupation was not yet contemplated, and the conquerors were satisfied with a heavy money payment, on the receipt of which they withdrew; certain conversions, however, were made. The civil war which followed the death of 'Uthmān delayed the activities of the Muslims in this region for a time, but in 665 the first Umayyad Khalifah, Mu'āwiyah, dispatched an expedition thither, which overcame the troops sent by the Byzantine emperor, and in 669 established a province Ifriqiyyah, with 'Uqbah b. Nāfi' for its first governor, who for the first time employed Berber converts as soldiers, and founded the city of Kairawan. Since the Islāmic programme was carried out by this governor, who threatened the pagans with extermination, the religion began to spread fast among the Berber tribes. In 675 'Uqbah was replaced by a less vigorous governor; but he was sent back to his province by Yazīd I. shortly after his accession, and proceeded to organize an expedition which finally reached Ceuta in the extreme west of Africa, whence he turned south and saw the Atlantic before starting homeward; but he did not again reach Kairawan, as his army was attacked by superior forces and annihilated at Tehuda, N.E. of Biscra. His defeat and death (683) were followed by a general revolt of the Africans from Arab rule, and an independent Berber state, with Kairawan for capital, was able to maintain itself for five years. In 690 this city was re-taken by the Arabs, who, however, evacuated the province, which lapsed into anarchy. An end was put to this by Mūsā b. Nusair, sent in 705 to Kairawan as governor of Ifriqiyyah, who traversed as far as Ceuta the country previously invaded by 'Uqbah, penetrated as far south as the Oasis of Sijilmasa, took Tangiers, and installed

a Berber convert there as governor. He returned to Kairawan in 708, having definitely won N. Africa to Islām, and put an end to Christian domination, where it still existed. The pious Umayyad 'Omar II. is said to have manifested zeal in the propagation of Islām among the inhabitants of these territories.

The Khārijites, who were giving much trouble in the eastern dominions of the Khalifahs, also sent missionaries to the west, where they found a ready hearing among the recently converted tribes. The Ṣūfī doctrine spread among the westerly tribes, the Ibādī in Ifriqiyyah proper. In 740 a revolt broke out in the extreme west against the Umayyad ruler in favour of the Khārijite doctrine, and, as it met with some initial success, it spread over Muslim Africa; a Syrian force sent by the Khalifah Hishām to quell the rebellion was defeated on the Sebu. Another force headed by the governor of Egypt in 742 was more fortunate; but, though Kairawan was rendered secure, the Khārijites maintained themselves at Tlemsen and in the neighbouring parts of the modern Morocco, and various independent Khārijite communities established themselves to the west of the continent.

At the beginning of the 9th cent., while the dynasty of the Aghlabites was establishing itself at Kairawan, under the nominal suzerainty of the Khalifahs of Baghdād, but virtually independent, an 'Alid dynasty called the Idrisid became dominant in the west, and in 808 founded the city of Fez. Other petty dynasties were also established in various places. The great event in the history of Muslim Africa during this century was the arrival of the Fātimid missionary Abū 'Abdallāh, who won adherents among the Ketama, and by skilful organization and strategy was able to overthrow the Aghlabites, and install at Kairawan a Shī'ah dynasty, which presently substituted for Kairawan a new city, Mahdiyyah, as metropolis. The petty principalities to the west of Kairawan alternated in their allegiance between the Umayyads of Spain and the Fātimids of Mahdiyyah, but the latter remained the dominant power in N. Africa until they, having conquered Egypt, transferred their capital to Cairo, leaving in possession of Mahdiyyah a dependent dynasty called the Zirids, who in the middle of the 11th cent. threw off Fātimid suzerainty. As the 11th cent. neared its end, the Almoravid dynasty, founded by an adventurer named Yūsuf b. Tāshifin, with its capital at Morocco, obtained the hegemony; and this, in the middle of the 12th cent., was displaced by that of the Almohads founded by Ibn Tūmart, which under its first actual sovereign, 'Abd al-Mu'min, obtained possession of all N. Africa as well as Spain. This dynasty lasted one century only, and was succeeded by three—the Merinids with their capital at Fez, the Ziyānids with theirs at Tlemsen, and the Hafsids, with theirs at Tunis—whose constant disputes kept N. Africa in a state of turbulence for some two centuries. In the 16th cent. various points on the north and west coasts were seized by Portuguese and Spanish forces and then by Turks; the three native dynasties gradually disappeared, and, whereas that of Tunis gave way to Ottoman domination, which had Algiers for its centre, in the west a new empire, that of the Sharifs, arose. The capital of the Sharifs was at different times Morocco and Fez, and sometimes Meknes; their first dynasty, that of the Sa'dians, lasted from 1520 until 1654, when it was ousted by that of the Hassānians, which became prominent in 1633. The Sharifs and the Turks succeeded in ousting the Christian invaders from the places which they had occupied, but in 1830 Algiers was occupied by the French, whose empire has ever since been extending in N.

Africa. The connexion of the Turkish settlement in N. Africa with the government of Constantinople grew constantly looser from the time of their establishment, and the pasha of Algiers had difficulty in maintaining his authority over the territories which lay to the west of that place.

The population forming the Islāmic communities has remained Berber in the main, but, besides the influx of Arabs at the time of the original invasion, the introduction of the Arab tribes Hilal and Sulaim in the 11th cent. has been of great importance for the political development of the country. These tribes, which had been located in Egypt, were, it is said, sent westwards by the Fātimid Khalifah Mustanṣir, by way of avenging himself on the Zirid Mu'izz, who in 1048 had accepted the suzerainty of the 'Abbāsīd Khalifah, destroyed the Ismā'īlīa college at Kairawan, where the Shī'ite doctrine was taught, and burned in public all that was indicative of Shī'ism. The Arabs advanced victoriously, and compelled the Berber sovereigns to make terms with them; under the Almohads some of the divisions of these tribes were introduced into the western provinces and employed by the government as a military force.

'Far from attaching themselves to the soil as the al-Mohads had hoped, these tribes continued to live in the nomad state and to annoy the government by their turbulence' (E. Michaux-Bellaire, 'Les Tribus arabes de la vallée du Lekkous,' in *Archives marocaines*, iv. [1905] 69).

Indeed, their risings form many a chapter in the history of N. Africa. Towards the end of the 17th cent. the Hassānīd Sharif Ismā'īl purchased or procured a great number of Negroes, of whom he formed agricultural colonies, chiefly in the neighbourhood of Morocco, enjoying various privileges, but bound to place all male children from the age of ten at the disposal of the sovereign, to be trained for his guard, while various employments were also found for the females. By the end of his reign as many as 150,000 of these black soldiers were registered in his lists; they were placed under the patronage of Bukhārī, the author of the chief collection of traditions, whose sanctity in certain parts of the Islāmic world approaches or even exceeds that of the Prophet. The purpose of this scheme was to provide the Sultān with a guard unconnected with the native population, on whose fidelity he could rely. A Turkish and a Levantine element, neither very considerable in magnitude, were introduced into the eastern provinces by the Ottoman conquests.

2. Sects and orders.—It will have been seen from this sketch that during the first four centuries of Islām both Khārijite and Shī'ite opinions held sway in different parts of N. Africa. The former are still represented by certain isolated communities (see art. KHAWĀRĪJ); when the Zirids asserted their independence of the Fātimids, Shī'ite opinions were condemned, and a general persecution of those who held them took place (1014); some years later (1045), on the occasion of a further dispute between the Zirid and the Fātimid monarchs, the former asserted the legitimacy of the 'Abbāsīd Khalifate and proclaimed the orthodoxy of the Mālikite system, upon which the Almoravids also insisted. The founder of the Almohad dynasty was a follower of the Ash'arite theology, and himself propagated it in Africa, displacing that of the Zahirites (Qalqashandī, *Ṣubḥ al-A'shā*, Cairo, 1915, v. 191). The further changes of dynasty appear to have produced no alteration in the dominance of these systems. The historians of the earlier period call attention to two purely African sects, both of which obtained some hold. The first of these was that founded by Ṣāliḥ b. Ṭarīf, prophet of the Bargwata in Temessna, who about A.D. 750 promulgated a Qur'ān containing *sūrahs* named after 'the Cock,' 'the Elephant,'

'the Asses,' 'Adam,' etc., and was recognized by his tribe. After a reign of forty-seven years he departed to the East, promising to return under the seventh sovereign of his dynasty and leaving his son Elias to continue his work. This successor reigned, we are told, fifty years, professing Islām, but secretly harbouring his father's heresy, which was openly professed by the third of the line, Yūnus. Yūnus endeavoured to enforce its acceptance under penalty of death, and is said to have razed numerous cities and massacred crowds of his subjects in his endeavour to propagate the doctrine. The doctrine seems to have differed from orthodox Islām in matters of ceremony chiefly. It substituted Rajab as fasting month for Ramaḍān; it prescribed ten daily and nightly prayers instead of five; its sacrificial day was 11th Muḥarram; its alms-tax was a tithe of all fruits; its ceremonial cleansing was much more elaborate than the orthodox; some of the prayers consisted of gestures without bending of the body; and the formulae were in the vernacular of the tribe. The cock served instead of *mi'adhahin*; its flesh was a forbidden food, whereas that of the hen was only disapproved. Eggs also were forbidden. The sect survived till the middle of the 11th cent., when it was exterminated by the Almoravids.

Another Berber author of a Qur'ān was Hāmīm, prophet of the Ghumarah near Tetuan, who came forward in A.D. 925; in his system prayer was only twice a day, and the only attitude adopted in it was an inclination in which the ground was touched with the back of the hands. He prescribed fasting all Thursday, and on Wednesday till noon. He reduced the fast of Ramaḍān by a number of days, abolished pilgrimage, purification, and the total ablutio, and permitted sow's flesh to be eaten, on the ground that the Qur'ān of Muhammad forbade that of the boar only. Specimens of his Qur'ān, which was in the Berber language, are given in the *Kitāb al-istiḥṣār* (tr. E. Fagnan, Constantine, 1900, p. 143), and relics of the sect which he founded existed in the time of the historian Ibn Khaldūn (c. A.D. 1400), who asserts that the greater number of sorcerers came from the Jabal Hāmīm, which took its name from this personage, whose actual career appears to have been very short. He was defeated in the neighbourhood of Tangiers by a force sent by the Spanish Umayyad al-Nāṣir in the year 927, and his head was sent to Cordova.

In the year 1228 another prophet arose among the Ghumarah, called Muhammad b. Abī'l-Tawājīn, who performed miracles and instituted a code; he was, however, cursed by the saint and ascetic 'Abd al-Salām b. Mashīsh, in consequence of which most of his Berber followers withdrew from him. The prophet in retaliation caused the saint to be assassinated, but was himself shortly afterwards defeated by the garrison of Ceuta, and killed by a Berber; his descendants are still to be found in the neighbourhood of the Wad Ras, where, however, they are under a sort of ban, and forbidden access to the Jabal Alam, where the saint Ibn Mashīsh dwelt, of whose cult hatred for the Bani Tawājīn forms a part (*Archives marocaines*, ii. [1905] 24). Ibn Khaldūn gives no details of the system which this prophet tried to establish (*History*, ed. Cairo, 1284, vi. 222). The title 'Mahdī' is said to have been taken by the first of these prophets, and, being less likely to offend popular prejudice than the title 'Prophet,' it has been assumed by many pretenders in Africa—e.g., the founders of the Fātimid and Almohad dynasties, a contemporary of the former, 'a young man' at the commencement of the reign of the Fātimid Maṣṣūr (A.D. 946). It is noticeable that the Almohad Ma'mūn, at his triumphal entry into Morocco in 1230, definitely

rejected the claim of the founder of his dynasty to this title, asserting that the only Mahdī was Jesus the Son of Mary, and that the ascription of it to Ibn Tūmart was a fable. Numerous claimants to it have risen since that time (see art. MAHDI).

Of an obscure sect called the Baḍādwa, located on the right bank of the Sebu, an account is given by G. Salmon in *Archives marocaines*, ii. [1905] 353-363. A branch of these called 'the sect of Yūsuf' is mentioned as having arisen in the 10th century (*ib.* xix. [1913] 214). Apparently they base their system on the Qur'ān, but differ from other Muslims in points of ritual.

The general dominance of the Mālikite code, of which the most familiar compendium is that of Sīdī Khalīl (Abū Diyā), was not affected by the dynastic changes, except that in the provinces governed by Turks the official system of the Ottomans, that of Abū Ḥanīfah, was introduced without displacing the other; in these regions there were two *qādis*. In the cities of N. Africa there were theological schools which produced orthodox writers and teachers of eminence, and such were to be found as far south as Timbuktu, which was made subject to Morocco in 1590; one of the prisoners then taken, Ahmad Bābā, who belonged to a family of theologians, complained that the conquerors had pillaged his library, which, though containing 1600 volumes, was smaller than others which belonged to his relatives. The Islām of N. Africa was greatly influenced by the introduction of the form of Sūfism connected with the name of 'Abd al-Qādir al-Jilānī ([*g.v.*] † 561 A.H.), to whom the establishment of orders is traced. In one of the earliest European accounts of the orders (E. de Neveu, *Les Khouan: Ordres religieux chez les Musulmans de l'Algérie*, Paris, 1846) various popular beliefs about this personage are collected.

'He it is whose name is ceaselessly repeated by beggars demanding alms, and whose name is invoked by all whom any accident befalls. When a man falls, the bystanders and he himself cry out, "Ah, my lord 'Abd al-Qādir!" The miserable in their sufferings, and women in travail, pray him to intercede for them. In the month Ṣafar 380,000 evils of all sorts descend from the sky; of these he bears three-quarters himself' (p. 231).

Lists of the orders established in N. Africa were made by this writer, and more complete registers were later drawn up by L. Rinn, O. Depont, and X. Coppolani. Some of these either originated in Africa or are only known to exist there.

In the 15th cent. Shādhilīsm was propagated in Morocco by Muḥammad b. Sulaimān al-Jazūlī, who counts as the starting-point of all the orders and *zāwiyahs* of this region. An account of this personage, who died in 1464, and is famous throughout Islām as the author of the *Dalā'il al-Khairāt*, is given in *Archives marocaines*, xix. 277 ff., as an appendix to the treatise *Dawāt al-Nāshir* of Ibn 'Askar, which contains the lives of ascetics of Morocco; A. Graulle, who is the translator of this work, added to it as a continuation in vol. xxi. [1913] the *Nashr al-Mathāmī* of Muḥammad b. al-Tayyib al-Qādiri, and proposes to add as another supplement the *Ghurab al-Muḥtadar* of Ja'far al-Kittānī. The *Salwat al-anfās*, published at Fez in 1316, is of similar import. The amount of historical matter contained in these lives is small; their purpose is chiefly to edify. The growth of the orders throughout N. Africa, ultimately (according to French authorities) rendering possible a territorial division by *zāwiyahs* like parishes, does not appear to have at any time had a beneficial effect either on the religion or on the morals of the inhabitants. In an essay, 'Sur la Mentalité religieuse dans la région de Rabat et de Sale' (*Archives marocaines*, vi. [1906] 423-435), E. Mercier describes the effects which he witnessed in two towns which count as sacred.

'The people are fanatics rather than believers, haters of the non-Muslim rather than religious'; the member of an order shares the superstitions of the ignorant, but is more bigoted and, having secured his own salvation, looks down on others who are less fortunate. 'Convinced of his immense superiority, he shuts himself up in a strict formalism, scrupulous and punctual observation of the rites which take up his time and save him the trouble of reflecting' (p. 4).

It is asserted that religion occupies a much larger share of Berber than of Arab life, and the names of the dynasties, Almoravids, Almohads, bear this out. In the 16th cent. the devotees (called *murābit*, or *marabout*) begin to play a political rôle of great importance; their *zāwiyahs*, or hermitages, which at times were like towns in magnitude, are regularly employed as refuges; they themselves in times of peace (so far as there were any) enjoyed divers privileges—e.g., under Turkish rule the marabouts of the Amokran family in the neighbourhood of Jijeli had the right to direct the provision of timber for shipbuilding, and others had a share in the proceeds of the piracy; they were employed as envoys, as mediators, and, at times, as regents. Most frequently we hear of them as heading insurrections. The dynasty of the Sa'dian Sharifs is said to have commenced by the inhabitants of Sus at the time of the Portuguese settlements betaking themselves to a marabout named Ibn Mubārak, whom they implored to place himself at their head and march against the Christian invaders; he referred them to the Sharif Abu 'Abdallāh al-Qaim, then residing at Tagmadaret, whose sons undertook the duty. In 1612 the Sa'dian Sharif al-Ma'mūn, who, in order to regain his throne, had handed over Al-Araish to the Spaniards, was assassinated by the *muqaddam* (abbot) Muḥammad b. Abī 'l-Lif, at the instance, it is said, of the marabout Abū 'l-Mahallī, who belonged to the Rahmānī order, and even proclaimed himself Mahdi. This personage was able to take Morocco, where he established himself as sovereign until defeated by another marabout Yahyā, who espoused the cause of the Sa'dian Zaidan, and was then, not without difficulty, persuaded to return to his monastery. In 1619 an insurrection in the province Habt was headed by a marabout al-Ḥasan b. Raisun, also in favour of a Sa'dian, who undertook to restore orthodox practice; and early in the 17th cent. the marabouts of Dela, Sale, and Sijilmasa headed political parties in different parts of the Sa'dian empire. In 1639 a Turkish force dispatched from Algiers which was entrapped in the Kabiliyah was saved by the intervention of a marabout, who obtained reasonable terms from the natives for it. In 1641 the Algerian pasha Yūsuf, starting an expedition for the suppression of anarchy in the province of Constantine, obtained the good offices of the marabout Ibn Sasi of Bone. In 1664 one named Sidi Hamud obtained a passage for the Algerian troops marching to the relief of Jijeli, which had been occupied by the French. In 1668 the marabouts of Dela were at war with the Hassānian Sharif Rashid, who defeated them and stormed their *zāwiyah*, which had grown into a populous and sumptuous town. His brother and successor, Ismā'il, had to face an insurrection headed by one of the survivors from this monastery, named Ahmad b. 'Abdallāh, who was defeated in the neighbourhood of Tedla. Their activity was no less marked in the 18th century. In 1757 a marabout raised the standard of revolt against the Hassānian Sharif Muḥammad b. 'Abdallāh in the country of the Ghumarah. In 1777 an insurrection was started at Tlemsen by a fanatic of the Derkawi order, named Muḥammad b. 'Abdallāh, whose followers were ultimately bought off. In 1787 Salah Bey of Constantine conducted a series of campaigns, not all of them successful, against the

heads of *zāwiyahs* in this province. In 1803 another Derkawi, Ibn al-Ahrash, said to be favoured by the British Government, established himself at Jijeli, and organized the natives against the bey of Constantine, whom he defeated and killed; and in 1805 the Derkawi revolted in the province of Oran and besieged Oran itself. In 1818 the marabouts of this province gave further trouble, and many more recent instances of their activity are recorded.

In general the ostensible aim of these devotees has been to free the soil of Africa from Christian occupation; but this has not invariably been the case, as there are instances of the marabouts compromising with the Christians or even invoking their assistance against rivals (*Archives marocaines*, ii. 46).

3. Cult of saints.—Closely connected with the orders is the cult of saints, which is wide-spread in N. Africa. The tomb of Idris, founder of the Idrisī dynasty, is a common place of pilgrimage, and both it and other tombs figure in the history as places of refuge. The tomb of Ibn Mashish (see above, p. 882) is visited in the month Sha'bān, and comprehends a series of visits to those of his ancestors and descendants (*Archives marocaines*, ii. 24). A list of the tombs visited in the Gharb is given in *Archives marocaines*, xx. [1913] 246-278; of the saints thus venerated the most popular is Sidi Qāsim b. Lallūsha († A.D. 1666). 'What is certain is that he has two sanctuaries, one on the left and one on the right bank of the Sebu' (p. 261), and that he has several festivals in the year, one of which lasts three days. A list for the province Habt is given in *Archives marocaines*, xvii. [1911] 481 ff. These saints have functions corresponding closely with those of the patron saints of Christianity.

The *zāwiyah* Sharqāwiyah of Bū 'l-Ja'd is not only a religious centre, but likewise a centre of preparation for the sacred war, and the greater number of the horsemen and shooters of the Gharb are placed under the patronage of Sidi Bū Abid al-Sharqāwī. In this region one frequently finds the name Bū Abid, which is considered to be of good omen for horsemen. Parents often give their children the name of a marabout under whose patronage some military exercise is placed' (ib. xx. 89).

An account is given (ib. p. 276 ff.) of various Maraboutic 'tribes,' i.e. groups of villages attached to some saintly cult, and not, like the *zāwiyahs*, isolated villages.

LITERATURE.—E. Mercier, *Hist. de l'Afrique septentrionale*, Paris, 1888-91, based on both native and European authorities. Much material is to be found in *Revue africaine*, nos. 1-238 (1856-1916), *Mémoires de la société archéologique de Constantine*, vols. i-xlv. [1853-1912], *Archives marocaines*, vols. i-xxi. [1904-18]. See also I. Hamet, *Les Musulmans français au nord de l'Afrique*, Paris, 1906; T. H. Weir, *The Shaikhs of Morocco*, London, 1904. D. S. MARGOLIOUTH.

MUHAMMADANISM (in Arabia).—One of the results of the taking of Mecca by Muḥammad was a determination on his part no longer to tolerate paganism in Arabia, and the destruction of the ancient cults took place throughout the peninsula with extraordinary rapidity; the ease with which the fetishes were discarded by their worshippers has elicited expressions of wonder from some who have chronicled the period. It is indeed suggested at times that there are still unexplored regions in Arabia whither Islām has not penetrated, but of these rumours there appears to be no confirmation. So far as the authorities before us warrant, every tradition of the older religions appears to have perished; statements about them which meet us in Arabic literature are ordinarily fictions based on Qur'ānic texts, and the so-called 'pre-Islāmic poetry' must, if genuine, have undergone wholesale expurgation. Even the revolts in Arabia which followed the Prophet's death do not appear to exhibit any recrudescence of paganism, but merely a desire for liberation from some of the

more onerous exactions of Islām; and permanent relief in one matter (the number of daily prayers) is said to have been obtained by one of the rebellious tribes, though the revolt was otherwise a failure. It is worthy of notice that these rebellions were led by prophets who aimed at re-enacting Muhammad's part, not by priests or other representatives of the fallen idols. The liberation of Arabia from paganism was speedily followed by the penalizing therein of all non-Islamic cults, even the Jews and Christians, whose rights had been respected by the Prophet, being either banished or forcibly converted in the time of the second Khalifah.

The murder of the third of these rulers in the year 35 A.H. was an event of the greatest importance for both Arabia and Islām. On the one hand, as some of the far-sighted are said to have urged at the time, it split the community into sects; complete unity has never been restored. On the other hand, the political centre of Islām was thereby shifted to a point outside Arabia; the Assassins came from Egypt, and the battles for the succession were fought from Basra, Kufa, and Damascus. These cities became the capitals of the rival claimants, and Medina was never restored to the position which it had once held. Arabia has, therefore, ever since been a province, at a distance from the seat of government; and such principalities as have asserted their independence within the peninsula have been mediocre both in magnitude and in importance. Such talent as Arabia produced has been attracted to the political centre, whereas the persons attracted to it from outside have been mainly devotees.

There are, however, certain ways in which the influence of Arabia upon Islām has been constant or permanent. On the one hand, Mecca has maintained its position throughout history as the greatest Islamic sanctuary; some sovereigns are said to have contemplated substituting either Jerusalem or Baghdad, but to have abandoned the idea as impracticable. This place has not only served to perpetuate the traditions which Islām took on from older times, but has also served as a rallying ground for the sects; and only occasionally has its sanctity been violated. Mecca is the place where the Islamic world as a whole can be most easily addressed, and to this day revivalist movements, which are usually reactionary, have a tendency to materialize there.

On the other hand, Medina remained the chief seat of Islamic learning some generations after it had ceased to be the political capital. At this place, the residence of the Prophet's widows, several of whom survived him for many decades, and the theatre of his most eventful years, the science of tradition came into existence, and this speedily became the most important source of law, though not first in the list. In the 1st cent. of Islām Medina produced a school of jurists who, though they left nothing in writing, by their labours prepared the way for the codes whose publication followed shortly after the foundation of Baghdad. In the middle of the 2nd cent. it was the home of the jurist Malik, where he received as pupil Shafi'i; Shafi'i in later life went to Baghdad, where alone conspicuous ability could find its reward. With the names of these personages two of the three great Islamic codes are connected. It is, therefore, Arabian (and indeed Medinese) law that theoretically is observed throughout Islām, though in the more civilized States the civil and criminal portions have given way to the Code Napoléon.

The development of the other Islamic sciences has little to do with Arabia, which in these matters has lagged behind the other provinces. The chief battles of the sects, too, have been fought outside

Arabia; they could not, however, cut quite adrift from the sacred territory, where they did not, as a rule, win many enthusiastic adherents. There has, however, been always a smouldering desire to recover that hegemony which was lost after the murder of Othmān; hence there has generally been disaffection towards the ruling power. Perhaps the most serious attempt made at recovering the lost hegemony was when in the early Abbāsīd period 'Abdallāh, son of Zubair, was able to maintain the two sacred cities for a time against the Umayyad generals. His cause perished with him; and rebellions which have since taken place in Arabia have had for their object recovery of independence within the peninsula rather than re-establishment of the political headquarters of the empire.

An account of the religious condition of Arabia in the 4th cent. of Islām is given by the geographer Muqaddasī (ed. M. J. de Goeje, Leyden, 1877, p. 96). The three great political sects, the Sunnis, Shī'ahs, and Khārijis (called by him Shurāt), were represented in different parts of the peninsula. One sect which has since disappeared, the Qarmatīs, was dominant in Hajr. The Sunni schools were not then restricted to four, and, besides the systems of Abū Ḥanīfah and Mālik, those of Dāwūd the Zāhiri, Sufyān al-Thaurī, and Ibn al-Mundhir had adherents. The Shī'ites in parts of the country were also distinguished as Mu'tazilites.

Of the rise of the Khārijī power in Oman an account has been given in the art. IBADĪS. Of a Khārijite who maintained himself in Yemen from 538 to 569 A.H. a notice is given by Ibn Khaldūn (tr. H. C. Kay, *Omarah's History of Yemen*, London, 1892, pp. 161-165). The branch of the Shī'ah which has maintained itself permanently in S. Arabia is the Zaidī (*q.v.*). It is called after a descendant of 'Alī, Zaid, who perished in an abortive rising of the year 122 A.H. For its history, references may be given to the work of H. C. Kay (pp. 184-190), and Khazraji's *History of the Rasūlī Dynasty of Yaman* (tr. J. W. Redhouse, 5 vols., London, 1907-13). An account of the Qarmatīs in Yemen by Janādī is also translated in the work of Kay (pp. 190-212). Other sects were either at one time represented in Arabia or are still to be found there; of a Shī'ite sect called Sab'iyyah representatives are to be found in a Yemenite community called Yām (Ahmad Rāshid, *History of Yemen and San'a* [Turkish], Constantinople, 1291 A.H., ii. 87); their views appear to be similar to those of 'Azāqirī (Yāqūt, *Dictionary of Learned Men*, ed. D. S. Margoliouth, London, 1907-13, i. 301).

Probably the most important religious movement which has taken place in Arabia since the rise of Islām is that called Wahhābī (*q.v.*), the origin and course of which have been described by the English travellers W. G. Palgrave, Lady Anne Blunt, C. M. Doughty, and the Austrian traveller E. Nolde.

So far as the literature of these sects has hitherto been made accessible, it would appear that they have had to adopt and modify the results of the labours carried on at the great Islamic centres, and have themselves been incapable of producing original works of any consequence. One of the few specimens as yet accessible of purely Arabian theology, *Al-Ilm al-Shāmīkh*, by Ṣāliḥ b. Mahdī of Yemen († 1108 A.H.), in which an endeavour is made to find a common ground for the sects by going behind the supposed innovations of the founders, appears to rest entirely on the older theological works, already known in Europe, the authors of which were natives of extra-Arabian provinces. We learn from this work that the Sūfi orders and practices, which originated in Baghdad and Basra, were in the author's time

well represented in S. Arabia. Against these the Wahhābī movement in the centre and north of the peninsula was to some extent a revolt.

From the statements of the few travellers who have spent much time in the peninsula and have been able to familiarize themselves with its conditions, it would appear that the great bulk of the population are, in theory at any rate, fiercely Muhammadan, but that the observation of the practices which the system enjoins is much more regular in the towns than in the desert. There is, however, considerable difference between the statements of different travellers, and much variety has doubtless been occasioned by local, temporal, and personal factors. When K. Niebuhr (in the latter half of the 18th cent.) visited S. Arabia, he found that a Christian was there treated somewhat as a Jew was treated in Europe—as an inferior being, but not necessarily to be molested.¹ Perhaps the greater number of visitors in the 19th cent. either adopted or simulated Islām; and this, indeed, has been a necessity in the sacred territory, where the presence of unbelievers is not tolerated by the government. In the Wahhābī States the tendency seems to have been in the direction of intolerance; yet on this matter almost contemporary accounts are inconsistent, and it would appear that the demeanour of the traveller has largely determined the conduct of his entertainers; even a missionary who went to Haiel with the avowed object of circulating the NT was only sent under escort out of the Wahhābī territory. The explorers of S. Arabia appear to have undergone little molestation on religious grounds; intertribal wars and international politics have interfered with them much more. It is worth noticing that the Cairene journal which is conducted ostensibly in the interest of the Muslim chieftains of S. Arabia has for its proprietor and editor a Christian with the unmistakable name 'Abd al-Masīh, 'Slave of Christ.'

LITERATURE.—This is sufficiently quoted throughout the article.
D. S. MARGOLIOUTH.

MUHAMMADANISM (in Central Asia).—In sketching the peculiarities of Islām in Central Asia, it is necessary to begin with the impression which the difference between the religious life in western and middle Asia must make upon any one who has occasion to study these wide-spread portions of the Muhammadan world. From Constantinople east a gradually increasing fanaticism and ignorance will be observed, and the deeper the penetration into Asia, the more outspoken and intense become the hatred and aversion of the believer to the adherents of a foreign creed, and the less is it possible to ignore the points of divergence separating men of various religions. In Turkey, where Christians and Muslims have lived for centuries in close proximity, a long existing and continuous intercourse with the European world has undoubtedly smoothed away many asperities, and has, to a certain extent, prepared for a mutual understanding. In spite of the temporary outbreaks of enmity between Kurds and Armenians, caused by the predatory habits of the Kurds and not by their religion—for they are very lax Muslims—the relations between Christians and Muhammadans are fair, and would be much better if the misrule of the central government on the Bosphorus and the political instigations from without did not steadily envenom the situation. In Persia Islām presents itself in quite a different form. There first appears the deep-rooted enmity between Shi'ites and Sunnites, and the fire which this schism kindled more than 1200 years ago is still raging. As for the life of the Shi'ite sect, what the present writer saw and heard during his

wanderings as a dervish in Irān gave him a very poor opinion of their piety and the moral effect of their teachings. Outward appearance and formalities, hypocrisy and fanaticism, hatred and implacability, are the main characteristics of the national religion of Persia; and, whereas in Turkey a good deal of the hierarchical power is invested in the hands of the Sultān, in Persia we find the clergy the supreme arbiters of the spiritual life, unchecked by the secular government, and very frequently its rival. During the more than 100 years' rule of the present Persian dynasty the Shāhs have striven in vain to curtail the influence of the priests; the Imām Jum'a of Isfahān and Karbalā were and are their equals if not superiors in power, and the Shāh's ordinances are nil without their consent.

If we turn now to Central Asia, the difference will at once appear which separates Islām there not only from Irān—which is very natural—but also from the western portion of the Muhammadan world, in spite of their common Sunnite character and common Hanafite rite. For it is only in E. Turkestan that adherents of the Shāfi'ite rite are to be met with. There we find a distinctly different religious life, the manners and customs of which do not resemble those of W. Asia. There everything bears the special stamp of extravagant fanaticism, of an exalted conception of the value of ritual trivialities, and of a deep hatred against innovations. In observing the Central Asian Muslim in his daily life, his social intercourse, his trade, and his attitude towards his government, one is tempted to believe oneself not in the 14th, but in the 2nd cent. of the Hīrah, and probably even then the prescriptions of the Qur'ān and the Sunnah were hardly so rigorously observed as they are to-day in Central Asia. Nearly one-third of the day is devoted to religious practices. Every good Muhammadan has in his room a quadrangular depression for the ritual ablutions, a niche in the wall in which to keep the Qur'ān, and a special place reserved for the *sajjādah*, or prayer carpet. Like most Orientals, he is careful to have his dress in harmony with the prescripts of his religion, and not the slightest alteration has taken place in the cut and shape of his inner and outer garments. Any deviation from the old custom, be it only in button or braid, is looked upon as an infringement of the spirit of the law. Even the material of his dress is under rigorous rule; and, as the use of pure silk is prohibited by orthodox Islām, the silk stuffs manufactured in Bukhārā and Khoqand are intermixed with a few threads of cotton. The turban, also, the *jubbah*, or overcoat, and many other garments have undergone no change for centuries, there being a predominant desire to imitate and reproduce the usage of the Muslim world of bygone ages, and particularly of Baghdād, Damascus, and the holy cities of Arabia. The case is similar as to the relations between the sexes. The separation is much more strict, and women are looked upon as mere chattels and slaves in the hand of a tyrannical master, in spite of the milder views of the Qur'ān and its expounders. They not only cover their faces with a thick impenetrable veil, but they are literally shrouded in a cloak of greater length and width than their body; and, in order not to attract the covetous glance of men, young girls even have to feign the appearance of old decrepit matrons, and very often walk leaning on a stick, as if bowed down by age or infirmities. The prohibition, also, of alcoholic drinks is very naturally more rigorously enforced than elsewhere in Islām, although in former times the ruling classes were noted for indulging freely in spirits; during the epoch of the Timūrids princes are mentioned who died

¹ *Description de l'Arabie*, Amsterdam, 1774, p. ix.

of *delirium tremens*; and Bābar and his followers transported this vice to the court of the Mughals. This, however, could not be said of the masses. In the present writer's time (1862-64) they were rigorously abstemious, and it is only since the annexation by Russia that the use of brandy and beer has begun to spread among the inhabitants of the towns.

In the observance, then, of the ruling prescripts of the Qur'ān and Sunnah the Muhammadan in Turkestan surpasses all his co-religionists elsewhere; his creed is the moving power in his spiritual and material life; by it he is guided in all his undertakings, thoughts, deeds, and wishes. His Muslim brother in Turkey and Persia is satisfied when he is able to perform his five daily prayers, consisting of a certain number of *rak'ahs* (bowings), and has spent three to six minutes at *murāqabah* (contemplation). The religious man in Central Asia must go far beyond this, for he has to add a few *nāflah* (additional) *rak'ahs*; he remains from ten to fifteen minutes in contemplation, and, after having performed this extra prayer, he has to read in the forenoon either the *sūrah Yā Sin* (xxxvi.) or *Innā Fatahā* (xlviii.), and in the afternoon he has to recite a portion of the *Mathnawī* of Jalāl al-Dīn Rūmī (*q.v.*), or to chant a few *ilāhīs* (hymns). This form of devotion is obligatory on every educated and respectable man, whereas the performance of the five prayers is indispensable for every Muslim irrespective of sex, age, or calling; and whoever neglects this duty, or remains ignorant of the elementary teachings of Islām, cannot escape every kind of vexation and reprobation on the part of the authorities. For this purpose a special functionary called *ra'īs* (chief) is appointed, who, accompanied by one or two servants, has to traverse the bazaars and the public places with the *dirrah*, a whip made of twisted thongs, in his hand, and, whenever he notices any one who does not go to the mosque on the first sounds of the *mu'adhdhin* (the public crier who assembles the people to prayer), he is entitled to beat the lingerer with the whip, or to put him in prison. The *ra'īs* plays, besides, the part of a public examiner: he stops at random any one in the street, puts to him a question concerning the main prescriptions of Islām, and the individual unable to answer is sent at once to school without consideration of age or profession. Full-grown and even grey-bearded men are sent to school by the religious police to learn their lesson by heart before being allowed to go. The *ra'īs*, whose office is a survival from the early Khalifate, non-existent elsewhere in Islām, also superintends the laws of public morality. Women indecently dressed are publicly rebuked and sent home, and even children are subjected to his control. What he is still for Central Asia that the *muhtasib* (police inspector) was for all Islām in former times; but at present, when modern European institutions are gaining ground, the office is but a nominal one in Persia as well as in Turkey. Further, not only are the prescripts of the Qur'ān more rigorously kept; they are also differently expounded. In Turkey, *e.g.*, the cutting or shaving of the beard has been practised at all times, whereas in Central Asia it is looked upon as a deadly sin, or even as apostasy. In Turkey, again, and everywhere in Islām, it suffices for the believer to wash certain parts of his body after relieving nature; in Central Asia this is much more circumstantial, for he must apply *istinjā* (cleaning with a flint or with a clod), *istinja'* (washing with water), and *istibrā* (drying). For this purpose he conceals a few clods in the fold of his turban.

But these and many other peculiarities of Islām in Central Asia are of secondary importance in

comparison with one salient phase of the religious life, namely, the wide-spread and highly influential religious orders which dominate the situation, and have ever been the main moving power of the spiritual life. During many years' intimate acquaintance with the Muhammadans of Turkey and Persia, the present writer never observed such strict adherence to the rites of the different orders and such veneration for their members, generally called dervishes, as in Turkestan. In the Ottoman empire—and this is particularly the case with the genuine Turks—the Maulavi, the Baqtāshī, the Rifā'i, and the Qādiri orders have many votaries among the lower classes, and the respective dervishes are looked upon as saints. But the better classes, *i.e.* the Efendis and the higher dignitaries, very rarely manifest the same degree of attachment. They visit the convents on Friday afternoons, they attend the sacred ceremonies, they take advice sometimes on both worldly and spiritual matters; but they have long ago ceased to be weak instruments in the hand of the Shaikhs, and particularly of the Baqtāshīs, who, having acted as revolutionary factors against the innovations in the time of Sulṭān Mahmūd II., are officially interdicted and only secretly followed. Somewhat similar is the case in Persia, where the conflicts between Shī'ites and Sunnites engage too much attention to leave room for the orders, although the Shaikhs and 'Alī Ilāhīs find followers among the lower classes. The host of dervishes to be met with in towns and villages are either vagabonds, living upon the credulity and superstition of the people, or harmless idlers who conceal their laziness under the *khirqah* (mantle) of religious exaltation.

In the settled parts of Central Asia, and even among the nomads, the orders play a very different and a far more important part. There they have taken hold of the entire population; they have pushed aside the secular clergy, *i.e.* the *'ulamā*, or priests educated in the *madrasahs*, and appointed as such by the government. These, of course, are continually at war with the members of the orders, among whom the Naqshbandīs, founded by Bahā al-Dīn, best known as the author of the *Rashahat 'ain al-hayāt* ('Drops from the Fountain of Life'), occupy the foremost place. Having associated with the Naqshbandī dervishes during his stay in Central Asia, the present writer found among them various subdivisions, the character of which is expressed partly in outer appearance, partly in the way in which they fulfil their obligations. They begin as *murīds* (disciples), and as such they must forsake all worldly purposes and, clad in the *khirqah* and *kulāh* (conical hat), holding in one hand the *'aṣā* (staff) and in the other the *kashkūl* (a bowl made of a half coco-nut), have to wander about singing hymns or taking part in the *dhikr* (mentioning the name of God) and *tawhīd* (acknowledgment of the unity of God). As the majority of the dervishes are illiterate, they learn a certain number of hymns by heart and recite them in chorus, accompanying the monotonous melody with frantic gesticulations and wild exclamations. Public places are usually selected for such performances, in order to attract attention and to collect contributions; for the dervishes, although forbidden to accept money, often betray the greatest greed, and their obtrusiveness has become proverbial. Once or twice the present writer tried to join such a howling company, but he could hardly stand the fatigue for more than an hour, whereas these adepts wander about for days without becoming exhausted. What struck him most was the endurance manifested during the *dhikrs*, and he remembers having seen one dervish crying

for two nights without interruption the *Yā Hū, Yā Haqq* ('He is the true and the right') without exhaustion. This, of course, refers to the lower degree of dervishes, who very rarely attain the rank of *khalīfah*, a kind of graduate, entitled to preside over a *takyah* or *khānqāh* (convent), and to lead the ritual proceedings. The title of *khalīfah* is mostly given to learned dervishes, who afterwards are addressed as *ishān* ('they,' as a polite expression instead of 'thou'), and have always a group of followers, who either stay continually with them or call on them once or twice a week. The *takyah* or *khānqāh* is really a kind of lodging-house in which there are always a few stationary dervishes, while the majority of the inmates are wandering members of the respective orders, who get a temporary shelter in an empty cell without any furniture or bedding and no regular food, except from time to time a *pīlāu* (rice dish), and, if deprived of all means, a piece of bread. The guests and inmates of the *takyah* regard it as a duty to assemble round the chief at the time of the five daily prayers and also at the particular exercises of the dervishes, such as the *talqīn* (recitation or instruction) and the *halqah* (ring). The latter is a circle of dervishes, presided over by the *ishān*, who sing and cry so long and so vehemently that they pass into a state of excitement and hallucination; their eyes turn wildly, their mouths foam, they tremble in all their limbs, and whoever touches a dervish in this state of ecstasy is believed to have a share in his devotion, and to be cured of all kinds of infirmities. Strange to say, the spiritual leader, who presides over the exercise, always remains quiet and motionless, unaffected by the eccentricities of his disciples, and expressing his satisfaction only by a complacent nodding. Old and young women, children, greybeards, and particularly ailing people, press around; they spasmodically seize the dervishes by their arms, head, or shoulders, they cling round their necks and embrace them, crying and sobbing; and some of them actually surpass the dervishes in their ecstasies. In Turkey this excitement, bordering on madness, is seldom or never seen, nor is there a similar participation on the part of the public.

In this and in many other respects the Islām of Central Asia stands alone. Everything in it bears the stamp of extravagance, unbridled passion, and weirdness of aspect. The believer is expected to follow blindly the tenets of the Qur'ān; no discussion or explanation is permitted, nor any effort to attract. Hence we see that, whereas in Western Islām the *adhān* (call to prayer) is given from the top of a minaret in a sweet melodious song, the *mu'adhdhin* in Turkestan summons the faithful in rough and half-articulated words from the flat roof of the mosque. The performance of religious duty, they say, does not require any allurements. Austerity and draconic rigour, too, prevail with regard to neglect or trespass of the laws of Islām. In the present writer's time a Muslim convicted of the use of alcoholic drinks was sentenced to death by being hurled from a tower, and a woman caught in adultery had to undergo the penalty of *raym* (being stoned to death). Strange to say, the Central Asians are themselves fully alive to the exceptional position which they occupy in Islām; they are even proud of it, asserting that they are the most rigorous executors of the ordinances of the Prophet, and the only Muslims whose religious belief has not been contaminated by foreign influence, but has remained as pure as in the time of the Prophet, which they call *wagt-i-sā'adat* (the period of happiness). Accordingly, the spiritual leaders and teachers in Central Asia form a distinct class, and enjoy greater fame and reputation in Turkestan

and the neighbouring countries than in the West. This refers particularly to the saints (*auliyyā*), religious teachers (*khawājahs*), and chiefs of orders (*pīrs*), and not to the learned in general. They are peculiarly esteemed and venerated in Central Asia proper, and, though not unknown in the rest of Islām, may be styled the eminently national or Central Asian Muslim worthies. As such they have taken hold of the religious spirit of the people of Turkestan, Afghanistan, and India. A few of these may be mentioned here, and, first, the previously named Bahā al-Dīn Naqshbandi. He was Muhammad ibn Muhammad al-Bukhārī, and, as a pupil of Sayyid Amīr Kulāl, he was early known for his great learning and piety in Bukhārā, then the centre of Muslim letters. There he founded the order named after him. During his lifetime he became the object of great veneration, and after his death the Amīr 'Abd al-'Azīz Khān erected over his tomb in the year 1544 the famous mausoleum and convent near Bukhārā, which has since become the greatest place of pilgrimage in Central Asia, and of such sanctity that three visits to it are deemed equal to a pilgrimage to Mecca. Next to Bahā al-Dīn ranks Khwājah Kāshānī, known as Makhdūm A'zam ('the greatest lord'), born in the village of Kāshān near Andījān (Farghāna), who died A.H. 949 (A.D. 1542), and was buried in Dehbid, a village near Samargand. In the early part of his life he acted as governor of various places, but later he devoted himself exclusively to religious contemplation and theological studies, and aroused so high a veneration that his children reached princely rank. Of these the most noted was the great saint of E. Turkestan, Khwājah Axath (his proper name was Hidāyat Allāh), the founder of a ruling dynasty, members of which still exist in Kashgar. Frequently mentioned and highly venerated also is Khwājah 'Ubaid Allāh Ahrār, one of the greatest theologians of his time († A.D. 1489 at Kumaghiran, a village near Samargand), whose grave is still a place of pilgrimage. Similarly with the tomb at Ghijduvān of Khwājah 'Abd al-Khālīq, a pupil of Khwājah Kāshānī († A.H. 1010). Others are Khwājah Abūfer Parsah, a pupil of Bahā al-Dīn († A.H. 845), whose grave in Balkh is a place of pilgrimage, particularly for Afghans; Khwājah 'Abd Allāh Hātifi, a famous poet and mystic, who spent much time in India with Bābar, the founder of the Mughal dynasty, and died there in A.H. 927 (A.D. 1520); and Juibārī († A.H. 997 [A.D. 1588]), whose grave is in Bukhārā.

Apart from these great theological scholars, saints, and mystics, there are a number of popular spiritual worthies who are venerated by the lower classes, sedentary and nomadic, and whose plain, unadorned, and more intelligible works are the favourite reading of the masses. To these belongs Khwājah Ahmad Yesevi, the Kirghiz patron-saint of the 12th cent. A.D.; his grave in Ĥaḍrat-i-Turkestan, surrounded by a huge dome now in decay, is a place of pilgrimage famous through all Central Asia. His religious poems, known as *Hikmat* ('Wisdom,' 'Philosophy'), are still much esteemed, although their language, mixed with Arabic and Persian expressions, is not easily understood by the uninstructed nomads. What Yesevi is to the northern part of Turkestan, Mashrab (personal name, Raḥīm Bābā) is for the east and south. He was a native of Namangan in Khoqand, and known as a *divānah*, a religious madman. A *divānah* wanders from place to place, behaves like a man insane, but, possessed of divine powers, works miracles, and has consequently an extraordinary influence over the ignorant masses. The present writer's own observation of these *divānahs* or *faqīrs* (poor) has led him to the con-

viction that most of them are cunning men with a lust for adventure, ready to exploit the plain people, and unwilling to submit to the sometimes rigorous monastic regulations of the orders to which they belong, or disliking the individuality of their *ishān*, or spiritual chief. It was chiefly in the villages and in the tents of the nomads that he met with these religious vagabonds; there they are highly revered. The *mullās*, on the other hand, accuse them of ignorance, and of breaking the precept of Islām—*Lā ruhḥān fīl-Islām*, 'There are no monks in Islām.' The majority of them are illiterate, but the present writer has met with *divānahs* who were versed in religious lore, had studied in *madrāsahs*, and had been moved simply by wandering propensities to renounce the regular and sedentary life of a priest. Among these dervishes there is also a certain Turk-*divānah*, a Turk by origin, as the name indicates (date unknown), who is very often spoken of by the nomads as a saint, and who interceded with Allāh for sinful humanity. He asked Him to deliver mankind from hell, to which Allāh replied that He would when peace, justice, charity, etc., reigned supreme in the world. Further, among the latter dervishes there are many of local celebrity, though others coming from distant countries have their own influence; in fact, the farther a dervish has wandered, the greater is deemed his supernatural power, and the stronger is his grip on the masses. The reason for this extraordinary influence of the beggar-dervishes does not lie merely in the utter ignorance of the people, but rather in the tyrannic rule of the governing classes, who, lay and ecclesiastic, are everywhere hated. These unofficial servants of God, then, discredited and despised by the *mullās*, are regarded by the lower class as of themselves; they thus very naturally become popular favourites, and frequently play the part of publicly avowed protectors against oppression.

In Western Islām there is hardly a trace to be found of these roaming saints, and those whom the traveller accidentally meets in the Balkan countries, in Asia Minor, and in Syria are mostly foreigners, and principally adventurers from Central Asia, India, or Persia. The Turk himself is too lazy, too easy-tempered, and too much given to a quiet life to find pleasure in the eccentricities of the wandering dervish. The Ottoman Turk, like the Kurd and the Arab, clings with great attachment to his faith; but he is very far from giving way to the religious ecstasy and wild fanaticism which are imputed to him by his detractors. In this respect the Western Muhammadan is many hundred years ahead of his fellow-believer in Central Asia; for the latter has remained absolutely in the position of the first centuries of Islām, and, indeed, at the beginning of the past century was even more fanatical and orthodox than in the time of Hārūn al-Rashīd and al-Ma'mūn. Such, however, was not always the case. As long as the Iranian element was predominant beyond the Oxus, worldly science found many votaries, and during the reign of the Sāmānids and later Central Asia was the birthplace of literary celebrities of high standing. But with the increase of the Turkish population and under the rule of warlike Turkish chieftains, mostly of nomadic origin, a great change has set in. The place of scientific culture has been taken by exclusively theological studies and mystic speculation. There has been no want of richly endowed colleges and schools; but the students, flocking from all parts of Central Asia and India, have turned their attention to purely religious questions, neglecting even such subjects as philosophy, law, and philology, which are still cultivated in the colleges of Western Islām.

Naturally, then, scientific inquiry having been gradually banished, religious eccentricity has taken its place, and Central Asia has long been the seat of fanaticism. Jalāl al-Dīn Rūmī, the author of the *Mathnavī*, was right in saying:

'Thou wilt to Bukhārā? O fool for thy pains!
Thither thou goest, to be put into chains.'

Similar things were said to the present writer by his learned friends in Turkey and Persia when they heard of his intended visit to Central Asia; and when, on returning, he related to them his experiences, many of them disdainfully criticized and laughed at the overheated religious zeal of their fellow-believers. Another reason for this great difference is to be sought in the belt of dreary sand steppes, infested by nomadic robbers, which surrounds Central Asia, and has always been a great hindrance to its communication with the rest of the Muhammadan world. Whilst Western Islām has undergone essential changes in the course of time, Islām in Central Asia has remained stationary, unaffected by the temporary intellectual movements in the West, and checked by the strong conservatism of a fanatical clergy and a despotic form of government. If Shi'ite Persia had not produced its great cleft in the general Muslim body, extending from W. China to the shores of the Adriatic, Islām in Central Asia could hardly have retained its fanaticism or degenerated into these aberrations, often censured by pious Muslims of other countries, but extolled by the Central Asians themselves, who accuse their co-religionists in Turkey and Arabia of levity of mind, and proclaim with pride: 'Bukhārā is the real strength of Islām and of the faith.' This difference becomes still more important when we observe that the spirit of zealotism has extended into N. India, and has particularly infected the barbarous mountaineers of Afghānistān. When we hear of a murderous attack by some Pathān or Khaibari on an unoffending British officer, we have always to think of one of those fanatics, who, anxious to become a *ghāzī*, a warrior for the faith, is ready to sacrifice his life for the title of martyr, and for the prospect of a place in Paradise. The existence of such *ghāzīs* was formerly reported among the adherents of Shaikh Shamīl in the fierce struggle between the Russians and Lesghians in the N.W. Caucasus, but nowhere else in Islām. It is, therefore, to the wild influence of the Islām of Central Asia that their appearance in the north of India must be ascribed. A. VAMBERY.

MUHAMMADANISM (in China). — 1. Historical. — China, regarded as a portion of the Muhammadan world, may be divided into (1) China proper (the 'Eighteen Provinces'), and (2) the external provinces (Turkestan, Tibet, and Mongolia). Of the external provinces only Turkestan need concern us here, for the Muhammadans resident in Tibet and Mongolia have never been more than an insignificant fraction. According to H. d'Ollone, *Revue du monde musulman*,¹ v. [1908] 94, they are to be found all along the highway to India through Tibet; thus, e.g., there is a mosque at Tatsienlu for the hundred or so Muslim families living in the vicinity, while mosques are found also in Batang and Lhāsa, those in the latter city being attended, it is said, by Hindu Muhammadans. The Lāmas of Tibet are in no way hostile to Islām—a fact that need excite no surprise, since the adherents of the two religions have a common political interest in making all possible resistance to the domination of China. Nevertheless, there is no prospect of any considerable expansion of Islām in Tibet (cf. *RM* v. 458). Hitherto, at all events, the commercial relations between Muhammadans and Tibetans

¹ Hereafter cited as *RM*.

have brought about no conversions to Islām, though the commercial bond is far from being insignificant. In particular, the Muslims of Sung-p'an-ting in Sze-chuan carry on with Tibet an important traffic in tea, but in this locality the d'Ollone expedition of 1907 found only a single Tibetan convert to Islām, who, moreover, was rather lukewarm in his adherence (*RMM* v. 458 f.); on the other hand, several cases of conversion to Christianity were met with in Sung-p'an-ting.

Muhammadanism was introduced into Turkestan at the time when the powerful kingdom of the Sāmānids was pressing towards the east. According to the tradition—interwoven with many legendary features—which is given in the *Tazkiret al-Boghra* (extracts in R. B. Shaw, *Sketch of the Turki Language*, Calcutta, 1878-80), the Turki prince Satak Boghra was converted to Islām at the age of twelve (A.D. 966; he reigned till 1047) by a certain Abū Naṣr Sāmāni, who came from the west. It is a fact of history that the descendants of Satak Boghra, known as the Boghrais or Ilekids, maintained their power till the year 1103, and in 1070, during the reign of Tapghach (one of that dynasty), Yūsuf Khass Hajib finished his great didactic poem *Quṭadku Bilik* ('Joy-giving Science'), a work imbued with the spirit of Islām. Probably the diffusion of the Persian language and civilization among the Turki population had contributed to the spread of Islām in that region. But, if Islām was here the recognized religion of the rulers, it certainly was no more than tolerated in the adjacent Turki kingdom to the east—the land of the Uigurs. Nor can the position of the Muslims have undergone any essential change by the time when the Kara-Khitai overthrew the Ilekid kingdom, since the conquered people were left in full exercise of their religious freedom as long as they paid tribute to the victors. Similar methods were practised by the Mongol conqueror Jenghiz Khān and his immediate successors. At the division of his empire Turkestan fell to his grandson, Jagatai, whose successors soon embraced Islām. Even at a later time, however, as the records conclusively show, the adherence of princes and people alike to the new faith was half-hearted, and the ideas and usages of Lāmaism (*q.v.*) were quite common among the professed Muslims. The blind superstition of the people facilitated the usurping tactics of the philosophically gifted descendants of Makhdūm 'Azam, who at first ruled as the spiritual advisers of the dispossessed house of Jagatai, and eventually in their own name. The dissensions that arose within the family of Makhdūm, their struggle with the Kalmuks of Zungaria, and the internal wars of the Kalmuk kingdom led (c. 1750) to the conquest of Zungaria by the Chinese, who shortly thereafter won Kashgaria as well, and joined the two territories together as the 'New Province' (Hsin-chian). Ever since that time the Chinese have been the ruling power there, and various attempts at revolt have proved abortive. Only for a short period, from 1864 to 1877, did the country—as Altıshahr ('Six Cities'), and subsequently Yettishahr ('Seven Cities')—figure as an independent Muhammadan State under the savage but politically capable Ya'qūb Beg, who recognized the suzerainty of the Sultān of Constantinople as Khalifah; *e.g.*, the coinage was stamped with his name. The Muhammadans of these districts are nearly all Turki, though an insignificant number are Dungsans (see below, pp. 891*, 892*) or Chinese, and the total population is estimated at from 1,000,000 to 1,500,000.

In China proper there existed no considerable groups of Muhammadans before the Mongolian period, and the reports of an earlier immigration are altogether legendary. Chinese tradition says

that Islām found its way into the country by land and sea. It tells of a maternal uncle of the Prophet, Wrhīb Abū Kabshah, who landed at Canton in A.D. 623 or 629, bearing presents from Muhammad to the emperor of China, together with an invitation to embrace Islām, and who then proceeded to Hsi-an-fu. Other reports say that the earliest message was brought by Sa'd Ibn Abi Waqqāṣ, whose tomb may be seen in Canton. The tradition attaches special importance to an expedition of 4000 Muslim troops which the Khalifah Maṣ'ūr is said to have sent to assist the emperor in a struggle with rebels (A.D. 755). The emperor permitted them to settle in the chief cities of the country; they took Chinese wives and became the progenitors of the numerous and important Muslim communities in China.

These traditions find no corroboration in the writings of Arabian historians. China and Islām, as a matter of fact, were brought into contact with each other as a result of the conditions prevailing in either sphere. About 620 a new power in Nearer Asia emerged, and another in China, each characterized by a remarkable ambition for conquest, and, advancing respectively eastwards and westwards, at length came into contact. Just as Islām (c. 720) conquered Transoxania, which it had been attacking incessantly after the conquest of Khurāsān, so T'ai Tsung (627-649), the second emperor of the T'ang dynasty, made himself master of Kashgaria. Of the more general incentives to mutual intercourse the strongest was commerce,¹ which was strenuously fostered by the later emperors of the Sui dynasty; another connecting link was the work of Christian missionaries, of whose bold advance into China the Nestorian stele of Hsi-an-fu (dating from 781) affords telling evidence. Against these influences, however, must be placed the impediment to intercourse arising from the tendency of both empires to rest content with their gains, and so to limit their frontiers. The emperor T'ai Tsung showed caution in rejecting the appeal of Yazdagird III. for assistance (as may be inferred from Ṭabarī, i. 2669 f., though the report of the ambassador is a fabrication; cf. i. 2876). The Muslims became more aggressive after their able general Qutaiba Ibn Muslim had subjugated Farghāna, but his expedition against Kashgar in 713 was unsuccessful. A comparison of the sources (Ṭabarī, i. 1275-1279) shows that Kashgar remained unconquered. The sending of ambassadors to the emperor of China (Hsüan Tsung, 712-756), however, is probably historical, though, as narrated by Ṭabarī (ii. 1277 ff.) in the traditional form, it is garnished with all the conventional features.² Under the Umayyads the Muslims had, indirectly, a good deal to do with China, since the *khāqān* of the Turki, and also the *jabghu*,³ were vassals of the emperor. A time-honoured tale is that of the scene between Naizak and the *jabghu* on the one side, and the *shadd* (the *shad* of the Orchoonian records) and the *sebel* (probably to be identified with the *siebel* of Theophanes; cf. E. Chavannes, *Documents sur les Tou-kiue (Turcs) orientaux*, Petrograd, 1908, p. 228) on the other, in which the *shadd* makes the kow-tow before the *jabghu* (Ṭabarī, ii. 1224, year 91 [= A.D. 710]). The *jabghu*

¹ Notwithstanding the surreptitious introduction of silk-culture into the Byzantine empire under Justinian, the silk merchandise of China was largely imported into Nearer Asia. It was conveyed on land by the ancient 'Iṭar ad Seres,' or by sea through the Persian Gulf, on the north shore of which Al'ubulla (Ṭabarī, ed. Leyden, 1879-1901, i. 2284), and afterwards Sirāf (references in G. Le Strange, *The Lands of the Eastern Caliphate*, Calcutta, 1905, p. 258 f.), was the port for such products.

² Nothing is said, however, of an embassy from the Chinese side. At an earlier date, in the reign of Chosrōs Anūshirvān there were Chinese at the Sasanian court (Ṭabarī, i. 899; cf. T. Nöldeke, *Gesch. der Perser und Araber zur Zeit der Sasaniden*, Leyden, 1879, p. 157).

³ In Ṭabarī this term is always mutilated to *fighūyah*.

was sent to Damascus, and was probably the first Chinese, or Chinese Turki, that the Syrians had ever seen. It may be regarded as certain that it was Chinese statecraft that abetted the opposition of the Turki *khagān* and that of the smaller nationalities in Transoxania dependent upon him or upon China itself, so that the Muslims had to maintain a ceaseless struggle. The Khottal, who are probably to be located in the Pamirs, were not dislodged till A.D. 750 (Tabari, iii. 74), while Al'ikhrid, king of Kashsh, was slain in 751, his treasures—costly Chinese ware—being conveyed to Abū Muslim at Samargand (Tabari, iii. 79f.). When with the downfall of the Arabian empire the vigour of Muslim expansion had somewhat relaxed, and the central authority was busy with the maintenance and organization of what had been won, and when contemporaneously the central power of China under the T'ang emperors showed symptoms of decline, the interjacent territory was soon occupied by strong buffer States—first of all by the Uigurs, and then by the Ilkids (see above). Islām was thus placed in a very unfavourable position for making an advance into China. Weak as were the dynasties that followed the T'ang emperors, the people held firmly to the maxim, 'No foreign religion in China.' Buddhism, it is true, had made a successful entry in the face of vigorous opposition, but this is explained by the facts that (1) Buddhism was to some extent in harmony with the cult of reason (*li*), which, if hardly to be called a religion, was more widely diffused than any other, and (2) it assimilated certain elements of the national spirit and so adapted itself to the prevailing sentiment (see art. CHINA [Buddhism in]). Islām, which with its rigid doctrine of uniformity does not on principle express itself in creeds, and tends to repel by the defiant and arrogant tone of its adherents, and which, above all, contrasts with Buddhism in its being essentially a political religion, could not strike root in China save under the protection of the strong hand. The required protection was first provided by the rulers of the Mongol empire founded by Jenghiz Khān. These potentates had no religion—nothing at all events beyond the worship of their lucky star, conjoined with the egregious ambition to bring this star down from heaven. Jenghiz Khān himself saw only the advantages of a huge centralization of human beings, and, wherever it suited his purposes, he intermingled detached fragments of races without regard for nationality or religion. As a Mongol, his leading aim was the disintegration of the Chinese element and the fusion of the population, so that he might have nothing to fear from the formation of any powerful alliance against him. He found his auxiliaries—apart from his own countrymen—in the various Muslim tribes of the West, a race renowned for their courage. Among these the Turki took precedence, alike in numbers, in importance, in capacity for bearing arms, and in discipline. We shall hardly err in adding Afghan mercenaries; for the Afghans—the Pathāns of India—were always willing to serve for pay; and bands of warriors may also have flocked to him from the mountains of Persia—the fastnesses of the Kurds—though not the Persians in the narrower sense, the inhabitants of the plains, who had small reputation for bravery. Yet we can hardly look for definite information regarding the composition of his armies, or those of his successors, for the great Mongol rulers were not the people to lend themselves to the statistician, their great concern being with men, not with the keeping of trim muster-rolls. We may venture to assume, however, that the largest hordes of their followers were supplied by the countries lying nearest the scene of their conquests, viz. besides

the land of the Turki between the Great Wall and the mountain barrier of the Thian Shan (Chinese Turkestan), Transoxania and Khurāsān. This explains also the curious phenomenon that from that day till the present Persian has been regarded by the Muslims of China as the language of polite education, and that the vernacular Chinese written by these Muslims is mixed with scraps of Persian.¹ In elucidation of this it has been supposed that at some time or other Persian immigrants had settled in the country, losing their mother tongue, but retaining vestiges of it in these numerous fragments. This, however, is certainly erroneous,² for the intermixture of Persian in the Muslim idiom of Chinese is due rather to the superstitious regard for the Persian language entertained by the barbarian and semi-barbarian hordes of Nearer Asia who swarmed to the camps of the Mongolian Khāns. Moreover, as soon as Kublai Khān had established his sway in China, he brought Persians in great numbers to fill the offices connected with the government and the court. Both Marco Polo and the Arabian traveller Ibn Batūṭah supply full information regarding these foreigners in the Chinese services.³ To a great extent they would be full-blooded Persians, and they no doubt helped to enhance the respect accorded to their language, and to keep it alive in the very heart of the country.

As to the numbers of Muslims brought into China by the Mongol emperors, we can hardly even hazard a conjecture, although an incident now to hand may throw light upon such importations. In A.D. 1226 a young Muslim warrior, a native of Bukhārā, who claimed to be a descendant of the Prophet—a Sayyid—placed himself at the disposal of Jenghiz Khān. The latter perceived at once the outstanding ability of the youth, and, attaching him to his bodyguard, soon began to employ him on commissions of a special kind. His successor, Kublai Khān, entrusted this Sayyid (who appears as Sayyid-i Ajall in the work of Rashid-al-Din, and as Sai-tien-ch'ie in the Chinese sources) with the task of subjugating the province of Yun-nan, and for six years the affairs of that province were administered by this talented Muslim. He died in office, and his two tombs—the first in Yün-nan-fu, the other near Hsi-an-fu—were discovered almost simultaneously by French explorers.⁴ The official employment of this Muslim from Bukhārā, who, of course, did not come single-handed, but was attended by a company of armed men, is of special interest, because his soldiers were sent on service to Yün-nan, while he himself was installed as viceroy of that province. We may accordingly infer that the influx of Islām into Yün-nan began at that time, for that it reached

¹ An excellent specimen of this idiom is found in the short Chinese MS (MS Sin. Hartmann I of the Royal Library, Berlin) ed. A. Forke, which contains a Chinese text in Arab. script (*T'oung-pao*, n. viii. [1907] no. 8). From the nature of the language Forke inferred—wrongly, as the present writer thinks—the Persian origin of the Dungans.

² It is no argument against the theory, however, to say that it would involve a wider diffusion of Shi'ism than we actually find, for the introduction of Shi'ism as the national religion of Persia and the dissemination of the Shi'ite principle among the people did not take place till a later period. There is also a tendency to regard all Persian writings as of Shi'ite origin—an utterly mistaken idea, as even the widely-read work, *Ma'arif al-Nabuwat*, 'Life of the Prophet,' by Mu'in al-Din al-Miskin († A.D. 1501), is Sunnite in character.

³ One of these officials made himself very obnoxious—Achmath [Ahmad] 'the Ballo,' whose story is given not only in the Chinese sources (cf. J. A. M. de M. de Maillet, *Hist. générale de la Chine*, Paris, 1777-85, ix. 412 f. [tr. of *Tong-Kien-Kang-Mou*]), which might naturally be expected to take a prejudiced view, but also in a straightforward account by Marco Polo (cf. H. Yule, *The Book of Ser Marco Polo*, London, 1903, I. 415 ff.).

⁴ For reports of these discoveries see P. Berthelot, 'Note sur des inscriptions arabes, persanes et chinoises du Chen-si, du Ho-nan, et du Chan-toung,' *CASILL*, Paris, 1905. A. Vissière has wrought the facts into a graphic and ingenious sketch (*RM* iv. [1907] 330 ff.).

that province by sea is in the highest degree unlikely.

Now, when we take into consideration the number of Muslims in China at the present day and the isolated movement just mentioned—the only known instance of the systematic migration of Muslims into China, and there was certainly no other—we are prompted to ask how the Muslim element has attained to such vast proportions. The total number of Muslims who settled in China from the date of the earliest campaigns of Jenghiz Khān (c. A.D. 1200) to the fall of the Mongol dominion (c. A.D. 1367) cannot certainly be reckoned at more than 1,000,000. At the present day, however, the Muslims resident in China amount on the lowest estimate to 4,000,000. That this vast expansion is due entirely to natural increase is inconceivable; we must therefore look for other possible factors. (1) From time to time fresh companies of Muslims came to China, as, e.g., in the retinue of Turki princesses of Muslim faith who entered the *harem* of the Chinese emperors.¹ (2) Chinese-born children were, and still are, sometimes made Muslims. (3) When great devastations occurred among the Chinese, the vacant places were filled by Muslims, as the latter, being endowed with superior vigour, were better qualified to grapple with the manifold misfortunes which throughout the centuries have fallen upon this ill-governed country. It has already been noted that the Muslims are represented as stately, strong, and brave. The high appreciation accorded to their eminent qualities by the Chinese government is shown by a recently-issued decree to the effect that Muslims are to be employed in the cultivation of sections of land adjoining the projected Ordos Road. Against these favourable conditions, however, must be set certain drawbacks. For one thing, the Chinese government has frequently been stricken with fear of the Muslims, the power of whose politico-religious organization it has good reason to know. Then there is the antagonism that arose between the Muslims of China and their co-religionists in the West; and, finally, their internal conflicts must be taken into account (see p. 894).

A word may be added regarding the names applied to the Muslims of China. It is a common notion that they are all called Dungans, and in point of fact the present writer has noted the use of this designation in Kashgar and Yarkand; by the Turki all Chinese-speaking Muslims are called 'Dungan(lar)'.² They themselves do not use that name, but term themselves 'Hui-hui' or 'Hui-tzu', and this appellation is applied by the Chinese to all Muslims, whether resident in China proper or in Turkestan. The Turki offer strong resistance to this usage, and desire to be called 'Chan-tu,' 'the turbaned,' lit. 'head-bound.'

A few details will now be given regarding the several provinces:

(1) *Kan-su*.—In this province the Muslims, according to P. Dabry (*Le Mahométisme en Chine et dans le Turkestan oriental*, Paris, 1878), number 8,350,000, i.e. about 85·6 per cent. The capital, Lan-chou (G. M. H. Playfair, *The Cities and Towns of China*, Hongkong, 1879; Shanghai, 1910, p. 8982), took no part in the insurrections of 1863-74 and 1895, and the Muslim residents

¹ The leading instance of this is furnished by the still existing colony of Turkish Muslims which can be traced back to the reception of a Turkish princess into the *harem* of the emperor Ch'ien-lung; cf. C. Arendt, 'Peking und die westlichen Berge,' *Mittel. der geograph. Gesellschaft Hamburg*, 1889-90, p. 64.

² This term may signify 'those who have come home,' i.e. those who have returned to the true faith, the implication being that all human beings come into the world as adherents of Islām, though some are alienated from it by their parents, and so become Jews or Christians. The word corresponds, therefore, to the Ottoman *dönme*, the name applied to the Jews of Saloniki who have been converted to Islām. The designation Dungan would thus seem to imply that the majority of Chinese Muslims have been converts.

received no damage. They possess a relatively high degree of culture. Lan-chou, as the terminus of the great trade-route from the West, is frequently visited by Muslims from India, Persia, and both divisions of Turkestan. Ho-chou and Kin-ki-pu (of which, however, the Chinese name is Ning-ling-t'ing; in Fu, Ning-hsia (Playfair, p. 5228)) are celebrated as centres of religious activity.¹ Kin-ki-pu was the nucleus of the west of Ma-hua-lung (see p. 894). Hsi-ning-fu, not far from Kokonor, is a place of special interest on account of its mixed population; it affords a most fertile field for the student of ethnology and philology, since, being situated on the frontier between China and Tibet, it gives an opportunity for observing the most heterogeneous elements such as seldom occurs elsewhere. With reference to the Salars, who live compactly in twelve townships around Hsin-hua-t'ing, see below, p. 892b. In Kan-su there are also Mongolian Muslims (cf. F. Grenard, 'Note sur l'ethnographie du Kansu,' in *Mission scientifique dans la Haute Asie*, Paris, 1897-98, II. 'Mission Dutreuil de Rhins,' p. 458).

(2) *Shen-si*.—According to Dabry, the Muslim population of Shen-si—probably largely overestimated—is 6,500,000, i.e. 78·7 per cent. Hsi-an-fu, the capital (Playfair, p. 2620), according to a report of the Futai (1782) to the emperor Ch'ien-lung, then contained 50,000 Muslim families (Dabry, p. 41f.), with 7 large mosques. According to Gabriel Maurice (in H. Havret, *La Sile chrétienne de Si-Ngan-Fou*, II [Variétés sinologiques, Shanghai, 1892-1902, no. 12] 115 ff.), the total population, including that of the four suburbs, is estimated—by mere guesswork—at some 400,000; of these one-tenth are Tatars, two-tenths Muslims, and seven-tenths Chinese. According to the tradition regarding General Kuo-tzu-i (897-781), who is said to have been a Christian, the Muslims had settled on the banks of the Yu-ho. When the great insurrection broke out in 1863, the Muslims of Shen-si wrought considerable damage, and, after they were overpowered, were expelled from the province. The people of Hsi-an-fu, the only city in which Muslims are now found, were kept under too strict a watch to take any part in the movement, and the Muslims were allowed to remain.

(3) *Shan-si*.—In this province the Muslims (including those of S. Mongolia) number, according to Dabry, 50,000, i.e. 9·41 per cent; exact data are lacking.

(4) *Chi-ti*.—The available data for the Muhammadan population refer only to the Muslims in Peking, who are said to number 20,000 families, say 100,000 persons, with 11 mosques.

(5) *Shan-tung*.—Muslims are found in many towns on the Great Canal, one of their centres being the important commercial city of Lin-ch'ing-chou (Playfair, p. 4276), where there is an academy (*madrasah*), in which most of the *mullās* of Peking are trained. There are said to be 325 mosques in Shan-tung.

(6) *Sze-chuan*.—In this province the Muslims, according to *RMM* v. 91 ff., number about 70,000 families (300,000 persons), with about 400 mosques, 11 of these being in Ch'eng tu alone (Playfair, p. 572). During the insurrections in Kan-su and Yun-nan, Sze-chuan remained passive. Visitors from Turkestan are numerous. The town of Sung-p'an-t'ing, already mentioned, is in this province; its 10,000 inhabitants, according to *RMM* v. 458, include 4000 Muslims, with 3 mosques, and about 100 *ahongs*.

(7) *Ho-nan*.—The Muslim population, according to Dabry, is 200,000.

(8) *Yün-nan*.—The Muslims here, according to Dabry, number from 350,000 to 400,000. With reference to the history of this province, the Muslim settlement of which we can trace from its starting-point, see above, p. 890b; for its more recent history we have the monograph of E. Roeder, *La Province chinoise du Yün-Nan*, Paris, 1889; cf. also d'Ollone, 'L'Islam au Yunnan,' in *RMM* iv. 285-290.

(9) In the remaining provinces Muslims are found in relatively small numbers. Dabry furnishes the following figures: Hu-nan (with Hu-pai), 50,000; Kiang-hsi, 4000; Kiang-hau (with An-hui), 150,000; Kuang-tung, 21,000; Kuang-hsi, 15,000; Kuei-chou, 40,000; Che-kiang (with Fo-kién), 80,000. These numbers, however, are not reliable; cf. Dabry's estimate (40,000) with d'Ollone's (300,000) for the province of Sze-chuan.

2. Descriptive.—If we may regard the Muslims of China as forming a single social complex, we may indicate the main features of that complex as follows.

(a) *Race and language*.—Whatever be the origin of the various Muslim groups, they must all be described at the present day as Chinese. The extent to which they share the distinctive qualities of the Chinese peoples cannot be precisely determined, the requisite data not being available. In any case they all speak the language of their adopted country; they share the variation of idiom, and resemble the real Chinese in their ways of thinking, while in writing also they use almost exclusively the national language. At the same time they are differentiated from the Chinese by important characteristics, and the division of the people as a whole—exclusive, however, of the Tatars

¹ With reference to the history of Ho-chou see *RMM* ix. [1909] 580 ff.; cf. Kin-ki-pu, ib. p. 564.

(Mongols) and the aborigines of the south (Lotos, Miaotze)—into Chinese and Muslims holds good throughout. The name Dungans is applied to a large section of the Chinese Muslims, who, however, as was said above, term themselves simply Hui-hui or Hui-tzu, and repudiate the appellation Dungans; but they would never think of calling themselves Han ('Chinese'), nor are they ever designated so. They form, in fact, a distinct racial aggregate, co-ordinate with the Chinese and the Manchus. The name Dungans is sometimes erroneously extended also to the Turki of Turkestan, but in reality there exists a marked contrast between Dungans and Turki. The Dungans who speak Turkish—they are by no means few—use a peculiar dialect of that language; and, as regards the Chinese spoken by the Dungans, it should further be noted that the document of Dungan origin in the Berlin Royal Library (see above, p. 890^b) is composed in a very corrupt Chinese. In Forke's opinion, however, its solecisms are not such as might be perpetrated by an uneducated Chinese, but are in many cases not Chinese at all, suggesting that the Dungans are of alien origin. As a special illustration of the intercourse between the Chinese Muslims and the Turki, cf. the story of *Hidayat-Allah* (Apaq Khojam) of Kashghar, who came to Hsi-ning-fu, in MS Hartmann I (Forke, p. 65 f.).

The process which dominates everything found within the Great Wall is one of adaptation to Chinese standards, of assimilation to the character of the yellow race—or 'black-heads,' as they like to call themselves. This process overcame the Manchus and many other peoples who invaded the country, and it was impossible that the Muslims should altogether elude its operation. The Chinese have a capacity for dissolving racial characteristics. This holds good even of physical qualities, for Chinese sentiment does not discountenance the affiancing of native women with foreigners, while Muslim women cannot legally be given in marriage to non-Muslims. The resultant diffusion of Chinese blood among the Muslims is of vast importance, and we cannot but admire the tenacity with which the latter have kept themselves from complete absorption by the Chinese. In spite of a considerable degree of assimilation in external matters, the two peoples look at things from a fundamentally different standpoint. For the Chinese reason (*li*) is supreme; for the Muslims tradition is all. Notable, too, is the contrast in certain traits of character. The Chinese is patient to a degree, and will put up with a great deal; the Dungan has an intense self-esteem, and is a dangerous man to offend. The difference reveals itself also in the outward bearing. The Chinese not seldom gives one the impression of being a dejected and down-trodden man; the Muslim carries himself proudly, and faces the world with a frank and open countenance. The relative physical debility of the Chinese may be due in part to the opium habit. Among the Muslims this is but rarely found; tobacco smoking is prohibited, and the drinking of wine and other intoxicants, which the stringent interdiction of the law does not prevent in Western Islam, is quite inconsiderable among the Muslims of China. All this testifies to a very real cleavage between the Chinese and the Muslims, and is a constant reminder that the latter are not Han-yen, but something else.

What, then, are the Muslims of China, ethnologically considered? To this question there is no answer, whether or not we postulate a connexion between the name Hui-hui (Hui-tzu) and the name Uigur, with all its various transcriptions in the Chinese language (Chavannes, pp. 87-94). From the time of the earliest considerable incursions of

Muslims, this region of many races has been overwhelmed with so many devastations that it is now impossible to speak of any single racial type. In addition to this we must also take into account the Muslim policy of incorporating people of other faiths, notably purchased children (cf. the present writer's note in his *Der islamische Orient*, i. [Leipzig, 1905]; more recently d'Ollone, in *RM* ix.). Such absorption of foreign elements must be regarded as a very important factor. In this connexion we should note the suggestive remark of d'Ollone to the effect that the purchased Chinese children do not exhibit a uniform Chinese type, and that the homogeneity of the Chinese 'race' is simply one of those *faibles convenues* that cannot be too vehemently opposed, since in point of fact many who are not Muslims at all are no more Chinese than the Muslims themselves.

A distinct ethnological group is formed by the Salars, who live in Hsün-hua-t'ing (Playfair, p. 3110) on the right bank of the Hoang-ho, and in the surrounding villages, and who are also found on a section of the road between Hsi-ning-fu and Hsichou. They show a racial character markedly divergent from the ordinary Chinese Muslims. In figure they are tall and spare, with nose large but not broad, eyes black and set horizontally, cheekbones not very prominent, face longish, eyebrows bushy, beard black and abundant, forehead receding, skull flattened behind, skin brown but not in any sense yellow. The Salars thus bear a striking resemblance to the Turki of Chinese Turkestan. Their chief peculiarity is their language, which may be described as a degenerate Turkish. Their style of dress is Chinese, but they shave the head completely and wear a polygonal cap (*tube*) of white colour. In religion they are strict Hanfites, and show the utmost respect to their spiritual guides (*akhons*), many of whom speak and write the Persian language; but they are given to the use of strong drink. Even the lower classes are acquainted with the Arabic script. They do not burn incense in worship, nor do they tolerate the emperor's portrait in their mosques. This form of the Muslim faith is said to have emanated from a reformer named Maming-hsin (Muhammad Emin), who preached to the Salars c. 1750, laying great stress on the practice of praying aloud (see below, p. 894^a), which led to serious disturbances. The Salars are daring brigands, and fraternize with the rabble of the upper Hoang-ho, with whom they also share a fierce hatred of the Chinese.¹

(b) *Marriage, family, kinship.*—The external aspects of the sexual relation among the Muslims of China are regulated by the *shari'ah*—in the scholastic form developed in the Hanfite school—which applies to all Islam, though here the separate ordinances are not very well known to the people at large, nor, even where they are known, are they very strictly observed. As to the degree in which the Chinese environment has brought about modifications in practice, we do not possess the necessary details of information; nor would such details yield a complete and uniform picture, since the influence varies greatly in different localities.²

¹ Our authority for these particulars is Grenard, *Mission*, II, 467 f. A somewhat different account is given by d'Ollone (*RM* ix. 538 f.), who says that the Salars are confined to twelve villages in the district of Hsün-hua-t'ing on the right bank of the Hoang-ho, but that the bulk of their traffic is with the left bank, especially the town of Hsi-ning, in which, however, there reside only five Salar families; they do not shave the head completely, but retain the pigtail; they wear, not the polygonal cap, but the turban-like head-dress of the Chinese; they have taken part in various risings; and they assert that their original home was Samargand.

² With reference to the well-known canon allowing the Muslim to marry as many as four wives, and to have slaves as concubines, Dabry (II, 266, n. 1) writes: 'In China the Muslims are forced to submit to the laws of the land regarding marriage.' This is undoubtedly a mistake in so far as it implies that

The like is true of the position of women in general. According to d'Ollone, the so-called law of veiling is not observed by Muslim women in China, who walk abroad without reserve (*RMM* ix. 540); Grenard had indicated the fact, but noted an exception in the case of the wealthier classes. In Ho-chou, however, d'Ollone found a different practice, the women there wearing a veil of black silk below the eyes (a custom which seems to the present writer to be connected with the sect of Ma-hua-lung); further, they go on the street on horseback instead of in carriages. As regards foot-binding, d'Ollone notices no difference between Muslim women and Chinese women; in Kan-su especially the practice is very common. That a Muslim should take in marriage one of alien faith is not objected to; it is rather deemed a meritorious act thus to bring an unbeliever to the true religion. The Muslim woman, on the other hand, must not be given in marriage to a non-Muslim; such a union is regarded as the most heinous of sins. In this matter, however, compromises are sometimes made with heaven: the marriage of a Turki princess with the emperor Ch'ien-lung has already been referred to; and, when the present writer passed through Minjol (a day's journey west of Kashgar) in 1902, a Chinese with a Turki wife (? concubine) was presented to him. Illicit intercourse is not punished here, any more than in other Muslim countries, with the strict legal penalty (forty whiplashes, or stoning), but it must not be supposed that any unusual laxity of morals prevails, and the unnatural vices common among the Chinese (see an instructive chapter in J. J. Maignon, *Superstition, crime et misère en Chine*, Lyons, 1902, p. 185 ff.) are less prevalent among the Muslims. No special attention is devoted to the education of children (for the schools see below (d)). Two very prominent features of family life are filial piety and ancestor-worship. The former is extolled in the narrative given in the Chinese-Arabic MS edited by Forke; the latter finds expression in the liturgical prayers for parents and ancestors, while use is also made of pictures of ancestors after the Chinese manner. Social distinctions are not inevitably fixed by descent, except in the case of the Prophet's descendants. The mischief wrought in other Muslim countries by surreptitious enrolment in the sacred lineage does not seem to be extensive among the Muslims of China. Nor does the veneration of Sayyids appear to have assumed any unusual forms on Chinese soil, apart at least from the case of the schismatic Ma-hua-lung, who claimed to be a Sayyid, but who failed to win such prestige as the notorious sons and grandsons of Makhdūm 'Azam (see above, p. 889*). The relative indifference to Sayyids (Sharifs) in China is explained by the popular belief that they are for the most part converts to Islām or the descendants of converts (Dungans).

(c) *Industries*.—The industries in which the Chinese Muslims are engaged are (1) agriculture, (2) commerce (including handicraft and traffic in goods), and (3) transit-trade. The Muslims do not take naturally to agriculture, but here the environment has asserted itself, inasmuch as the Chinese are pre-eminently an agricultural people, and have in great measure the faculty of infecting the alien population with their own habits. Accordingly, the Chinese Muslim is everywhere one of the most industrious tillers of the soil, so that it was recently reported that those employed in

Chinese law would intrude upon this domain of personal rights, though it may perhaps be necessary to assert the universal validity of the imperial ordinances. These ordinances are lucidly set forth in Pierre Hoang, *Le Mariage chinois au point de vue légal* (Var. Sinol., no. 14), Shanghai, 1898. The present writer has not succeeded in discovering among them anything that formally concedes an exceptional position to the Muslims.

colonizing the part of S. Mongolia which is to be opened by the railway-line between Kalgan and Kuei-hua-ch'eng are predominantly Muslims (*Bull. Com. Asie Franç.*, Oct. 1909, p. 456). While commerce as such is almost wholly in the hands of Chinese, who combine the qualities of the hard-working peasant with those of the astute merchant, yet the Muslims very largely monopolize the related branches of mercantile industry—the conveyance of goods from place to place and the retailing of products of their own or others' labour. Thus the mafus, i.e. horse-hirers and horse-dealers, as also carriers throughout the whole of China, are principally adherents of Islām, while certain trades—especially that of slaughtering animals (not including the pig, of course)—are largely in the hands of Muslims. Their special preference, however, is for official life, though in this department they are faced by a great obstacle, viz. the number and difficulty of the examinations to be passed by aspirants to the Chinese civil service. The Muslims who could successfully undergo these tests must always have been very few. This in itself, however, does not carry any discredit, for it simply means that the Muslims have not the required degree of plodding dullness for such ordeals. On the other hand, the most capable and energetic of them were doubtless able to fulfil the conditions of entrance into the Chinese army, and to work their way to the higher ranks. From the Mongolian period onwards Muslims have often filled the more distinguished military positions. As recent instances of this, mention may be made of General Tung-fu-hsiang (see below (d)), as well as of Ma-ti-kai, of Yün-nan, nephew of Ma-hua-lung, and commander-general of the forces in Sze-chuan.

(d) *Cultus, education, etc.*—The religious attitude of the Chinese Muslims is—outwardly, at least—characterized by moderation. They make concessions to the ruling power, hoping thus to gain security for person and property, and the most capable and resolute of those who enter the government service take part in the ceremonial of the national cult. The hatred of foreigners sometimes shown by Muslim officers of high rank, like that displayed by the Chinese themselves, is to be referred, not to religious motives, but to the exasperation provoked by the high-handed way in which foreigners interfere with the internal affairs of the country. In not a few cases, indeed, the conduct of the Muslim generals is to be traced simply to a vulgar hankering after rank and wealth, as has now been made clear by the observations of d'Ollone (*RMM* vi. [1908] 7 ff., controverting the misleading note in *RMM* iv. 441 f.). Tung-fu-hsiang, e.g., was in no sense a 'fanatical Muslim,' but a mere adventurer, who gained a following amid the chaos caused by the rising of 1861-74, and who, in return for the gift of a mandarin, made himself the tool of the viceroy, Tso-tsung-t'ang, and of General Lu-song-shan. He caused Ma-hua-lung, the prime mover of the revolt, and the prophet of the 'new doctrine,' who fell into his hands in a sortie from the rebel city of Kin-ki-pu, to be beheaded. At that time Tung acquired landed estates of enormous extent. It was he also who crushed the rebellion of 1895 in Hsi-ning-fu and Ho-chou, enriching himself, as usual, with the spoils fleeced from his co-religionists. He received the title of 'generalissimo' (*ta jue*), and was in effect king of the country. When the Boxer rising broke out at Peking in 1900, Tung hurried thither with his henchmen—the foremost of whom was the infamous Ma-an-liang, Tongling of Ho-chou—and made himself conspicuous by his violent and malicious proceedings against the foreigners, who saw in him only a Muslim at the head of a horde of Muslims,

and were quite unaware of his real relation to Islām. Having been ostensibly punished by 'banishment' to Kan-su, he lived there like a *sulṭān*. He held two fortified castles near Kin-ki-pu, and had a bodyguard of 500 veterans—as tenants of the surrounding estates which he had taken from Muslims. The local councils of Kin-ki-pu and Lin-chou could not lift a finger without his approval. After his death in February 1908, all his titles, of which he had been deprived at the instance of the European Powers, were restored, and his remains were buried with the highest honours at Kon-yuen, his birth-place (*RMM* vi. 700 ff.). Apart from adventurers of this stamp, whom probably the majority of Muslims would regard as apostates, there is a far-reaching antagonism between the indigenous and the immigrant peoples. The Chinese realize the danger involved in the Muslim aspiration of an *imperium in imperio*, while the Muslims, enjoined as they are by the Qur'ān to fight against the unbeliever, feel the ascendancy of the latter as a heavy infliction, and from time to time the strain has found expression in open revolt. The most notable and most serious of such outbreaks have been those of the north (Kan-su and Shen-si) in 1861-74, and of the south (Yün-nan) in 1856-72. It would be a mistake, however, to attribute these ruinous insurrections to religious motives alone, for racial antagonisms and the conflicting interests of different social classes were certainly no less potent factors.

The mosques resemble pagodas, the *mihṛāb* and *miḥnār* alone proclaiming their Muslim origin. We sometimes meet with Indo-Arabic styles, as, e.g., the two cupolas above the porch of each of the mosques in Sui-fu. For occasions of prayer the *akhons* (Pers. *akḥūnd*, 'learned one'; in China, 'mosque-minister') don the white tunic; the rest of the faithful wear for the time a cap never otherwise used, which is encircled by the turban, and may be of various colours—white, blue, green, or red. This cap has two shapes: the Meccan—a round, low cowl, wholly covered by the turban—not worn by many; and the Bukharian—polygonal, being formed of four or six pieces—which hangs out from beneath the turban. It is identical with the *tube*, or *topa*, worn by all Muslims in Russian and Chinese Turkestan.

The disruptive tendencies so common in Islām generally have made themselves felt in China. Ma-hua-lung, who was put to death during the rebellion in Kan-su, was the founder of a new sect, and his followers in Kan-su, where they are numerous, and in Sze-chuan, where as yet they are but few, regard him as the true successor of Muhammad. His descendants and disciples claim to possess superhuman powers. His teaching is called *hsin chiao*, 'new doctrine,' in contradistinction to *tao chiao*, 'ancient doctrine' (*RMM* v. 93). The nature of this new doctrine is something of a mystery. There is a tendency to regard it as an endorsement to Shi'ism, or perhaps an unusually bold representation of Sūfism, but the notices of d'Ollone (*RMM* ix. 571 ff.) show that in reality it is of genuinely Sunni character, and not a degenerate variety of the mystical philosophy so widely diffused throughout Central Asia. Ma-hua-lung was undoubtedly one of that class of visionary impostors represented in Chinese Turkestan by the Khodyas, i.e. the descendants of Makhdūm 'Azam, of whose ecclesiastico-political organization the present writer has given a detailed account in 'Ein Kirchenstaat im Islam' (in *Der islamische Orient*, i. 195 ff.). It remains an open question whether the Mahdistic idea played any part in the project of Ma-hua-lung; the reports of d'Ollone make no distinct reference to it. In any case, the

pretender was regarded as an incarnation of the Spirit—a *sheng jen* ('holy man,' 'prophet') equal to, or even higher than, Muhammad himself. It speaks well for the Muslims of Kan-su that only the lower classes were duped by this charlatan, who, wholly destitute of learning, presumed to know everything, and had his answer ready for every question. As the founder of a new sect, he had to enjoin certain external forms by which his adherents might be distinguished from others. For this purpose he chose the practice of praying aloud and of holding the hands straight open and horizontal in the *qiyām* (at prayer), in contrast to the general custom of silent prayer with the hands rounded and hollow. From this practice of audible prayer is derived the usual name of the sect, viz. *Zāhīriyah* (corrupted to *Chaiherinye*), 'those who pray openly,' as contrasted with the *Khāfiyah* (vernacularly 'Hufeye'), 'those who pray secretly.' In these externals Ma-hua-lung shows a certain affinity with a movement in the West which had found its way into China at an earlier date. About 150 years previously a reformer had appeared among the Salars (see above, p. 892^b) in the person of Muhammad Emin, known in China as Ma-ming-hsin, who introduced the custom of praying aloud, and thereby gave occasion for serious disturbances (Grenard, *loc. cit.*). Mu-hua-lung did not actually forbid his followers to attend the mosque, but he allowed prayer to be performed at home—in the 'common hall'—without special ceremonial garments. Usually three or four houses have a place of prayer in common, i.e. a single room set apart for worship, this arrangement being designed, it is said, to familiarize the adherents with the practice of prayer (*RMM* ix. 571). In Sung-p'an-ting, according to *RMM* v. 462, the followers of the new faith attend the same mosques as those of the old, while in Shen-tu, on the other hand, the breach is complete (*RMM* v. 462, ix. 561). The d'Ollone expedition had a very uncivil reception in the mosque at Ch'êng-tu; the people of the 'new doctrine' have the name of being hostile to Europeans, while the Muslims in general are friendly. After Ma-hua-lung's death in 1871, a rupture took place within the sect. His son-in-law, Ma-ta-hsi, and his grandson, Ma-mih-hsi, fought with each other for the sacred inheritance. Ma-ta-hsi, who is now (1915) sixty-two years old, has the advantage in numbers, and his place of residence, Cha-kou, near Ku-yuen, is an important religious centre, and has a *madrasah*. Ma-hua-lung's teaching was introduced into Yün-nan by his younger brother (or nephew) Talasan or Talamasan, who fell in a struggle with Ma-ju-lung. In Yün-nan, however, the sect has apparently a smaller following than in Sze-chuan, where d'Ollone met with adherents of the Hsin chiao from the boundaries of Yün-nan to Sung-p'an-ting on the border of Kan-su.

Alongside of the two groups of Hufeye and Chaiherinye are found two others, viz. Kuberinye and Katerinye. The meaning of 'Kuberinye' cannot be precisely determined—the word may possibly stand for *Kubārī* ('great'); 'Katerinye' is undoubtedly equivalent to 'Qādiriyyah,' signifying the adherents of 'Abd al-Qādir al-Jilānī (*q.v.*). It is maintained by a certain *akhon* that these four sects are respectively connected with the first four *khalīfahs*, each of whom is said to have inaugurated a particular ritual, viz. Abū Bakr that of the Hufeye, Othmān that of the Chaiherinye, 'Omar that of the Kuberinye, and 'Alī that of the Katerinye. The last-mentioned name is said to be applied also to those who venerate graves. In China, as elsewhere on Muslim soil, peculiar honour is accorded to the tombs of the eminently pious—those who have given credentials of saintship.

Thus, e.g., within a mile to the north of Sung-p'an-t'ing is to be seen the tomb of an *akhon* from Medina, who came to Sung-p'an-t'ing in 1668, lived for a time in Shen-si, and by his prayers saved the land from a drought in 1673. He died in 1680, and his tomb is guarded by an *akhon*. Another tomb, somewhat smaller, is found within the mausoleum. The orthodox *mullās* inveigh strongly against this practice (*RMM* v. 459). D'Ollone thinks that the veneration of graves is also a characteristic of the Hsin chiao sect (*RMM* ix. 533 ff.); but this cannot be admitted, and, indeed, it conflicts with other statements of the same writer. As a matter of fact, the veneration of graves is a world-wide custom, and naturally prevails here too; and that Ho-chou, the rallying-point of the new doctrine, should also contain an unusual number of sacrosanct tombs is a mere coincidence. Moreover, with reference to the name Kumbé chiao, which d'Ollone mentions as being applied to the 'new doctrine,' and upon which he bases his conclusions (*RMM* ix. 533), it remains to be shown whether the term (= 'grave-doctrine') is meant to indicate the distinctive characteristic of the sect. As regards the religious position of the ethnologically distinct Salars see above, p. 892⁹.

The idea of a *khalīfah* as a single individual invested with authority over Islām as a whole is unknown to the vast majority of Chinese Muslims (*RMM* ix. 561 f.). Yet the efforts directed from Stamboul in the latter half of last century were not altogether without result. Ya'qūb Beg recognized 'Abd-al-'Aziz as commander of the faithful, while Sulaimān, the Muslim king of Yün-nan, appealed to him, as *khalīfah*—in vain, it is true—for assistance.

As the intellectual life of the Muslims bears the closest possible relation to their religion, the aim of elementary education is to inculcate the rudiments of religious doctrine, the children being taught by readings from the Qur'ān and by short catechisms. In these exercises two languages are employed—both the national language and that of the Qur'ān (or a mixed Perso-Arabic dialect). There is a considerable circulation of anthologies from the Qur'ān, either with or without a Chinese translation, and booklets containing the leading elements of doctrine in both languages are also found.¹ The life of the Chinese Muslims has no place for art. To anything in the nature of artistic activity only a single field is open—the Arabic script, which is often elaborated in pedantic forms suggestive of the Chinese method of writing, angles and loops being formed as in the native calligraphy (especially in epitaphs). The Muslims also erect ornately written Arabic tablets, which, however, often show such a divergence from the common script that they are very difficult to read. Even the experienced E. Blochet mistook an *r* for a *y* (*RMM* v. 291).

(c) *Political relations.*—In China proper the Muslims have never secured an independent political existence, while in Turkestan, since its annexation (c. 1750), they succeeded in establishing only the short-lived Muslim government of Ya'qūb Beg (see above, p. 889⁹). The object of the Muslim rising in Kan-su and Shen-si (1863-74), which was among the contributing causes of Ya'qūb Beg's success, was likewise independence; but the movement proved abortive, and, in fact, no other issue was to be expected. The necessary condition of a permanent political organization is that it shall have a basis of nationality, and no such thing exists among the Chinese Muslims. The latter, as interspersed among the Han (Chinese), form, not a national, but merely a religious, aggregate, and all

¹ The present writer possesses a copy of such a bilingual catechism.

history teaches that political establishments based upon religion are ephemeral. It has certainly been hinted that the Muslims of China may possibly force their religion upon the rest of the population, and thus evolve a powerful Islāmo-Chinese kingdom. It is indubitable that such an ambition is not wanting among the Muslims, and that it will continue to act in certain localities as a source of insurgent movements against the imperial government. It is regrettable that the idea has been exploited for the double purpose of acquiring religious influence among the Chinese Muslims and of furthering political ends. Considerable efforts in this direction were made—though without the least success—by Sulṭān 'Abd-al-Hamīd in the latter part of 1900; and minor attempts at a later date proved equally fruitless, though hopes were not abandoned even after the deposition of the Sulṭān.

M. HARTMANN.

MUHAMMADANISM (in India).—Islām was introduced into India by the Arab invaders who entered Sind under Muhammad ibn Qasim in A.D. 712 and founded a Muhammadan State which was eventually absorbed in the Mughal empire; but this early Arab occupation was confined to Sind, and the Muhammadan conquest of the rest of India did not begin until nearly three centuries later, with the raids of Sabuktāgin and Mahmūd of Ghazna; when, however, Mahmūd died in 1030, the province of Lahore was the only part of Indian territory that he bequeathed to his successor. The permanent extension of Muslim rule in India dates from the latter part of the 12th cent., when the conquests of Muhammad Ghori resulted in the establishment of a Muhammadan dynasty in Dihli, which continued to be a Muhammadan capital up to the extinction of the Mughal empire in 1858. The scope of this article being limited to religion and ethics, no account of the political history can be given, though the intimate connexion between Islām as a religious system and the Muhammadan governments in India makes it difficult to consider them apart. A brief reference must be made, however, to the relations between the Muslim rulers and their non-Muslim subjects. The Muhammadan invaders at times during the early stages of the conquest exhibited a brutal intolerance towards the Hindus who opposed their armies, and ruthlessly massacred Brāhmins and razed temples to the ground; but, after the savageries of conquest were over, a certain amount of toleration was allowed to their Hindu subjects. The Arabs in Sind left the Hindus in undisturbed exercise of their religion and in the enjoyment of their old rights and privileges, and the later conquerors who founded kingdoms in N. India and the Deccan were generally too much occupied with the military consolidation of their own power, or felt too little interest in spiritual matters, to turn their attention to the propagation of their own faith. Even under the settled rule of the Mughals, dynastic and financial considerations dictated their policy rather than consideration of the interests of Islām. On the other hand, the reigns of several

monarchs were signalized by outbursts of fanaticism and the cruel oppression of unbelievers, their temples being destroyed and many of them converted by force. In Gujarāt Sultān Mahmūd III. (1537-53) was hated by the Hindus for the stringency of his enactments against them. In Kashmir Sultān Sikandar (1393-1417) acquired the designation *Butshikan* ('idol-smasher') by his ruthless destruction of Hindu idols and temples, and in Bengal Jalāl al-Dīn Muḥammad Shāh (1414-31) made himself notorious by his persecution of unbelievers. Aurangzib's (1659-1707) attempt to carry out a policy of unification led to several acts of repression, and tradition attributes to him the destruction of temples and the forcible conversion of Hindus in various districts throughout the whole extent of the Mughal empire. The latest example of such fanaticism on the part of a Muhammadan ruler was that of Tipū Sultān (1782-99), whose barbarities outdid anything recorded of previous monarchs after the first conquerors. Apart from such outbursts of fanaticism, the rule of the Muhammadans has generally been characterized by an attitude of toleration towards their Hindu subjects, and the adherents of the rival religions have often been closely drawn together by a spirit of amity and mutual respect.

The fact that the Muhammadan dynasties in India were almost entirely founded by foreign invaders was of great importance in the history of Islām; they brought with them a large number of foreign troops, and attracted to their courts military adventurers, poets, scholars, and others, who ultimately settled in the country. The foreign immigrants and their descendants—Arabs, Persians, Turks, Mughals, and Pathāns—formed an important element in the total Muhammadan population, and exercised a preponderating influence in the administration, the social organization, and the religious life. They received grants of land from the Muhammadan governments, or in times of political unrest arrogated to themselves rights of ownership, and thus formed the nucleus of an aristocracy that looked down with contempt on the native converts. The missionaries, to whose proselytizing efforts the conversion of whole tribes is attributed, and the saints, whose tombs are still venerated throughout all parts of Muslim India, were for the most part of foreign extraction. The shrines of these saints are still centres of religious influence and attract thousands of pilgrims every year; among the most famous are those of Khwājah Mu'in al-Dīn Chishtī († 1236) at Ajmīr, Farīd al-Dīn Shakkarganj († 1269) at Pākṣattān, Nizām al-Dīn Awliya († 1325) at Dihli, and Shāh 'Alam († 1475) near Ahmadābād. The great family of Bukhārī Sayyids, who settled in Uch in the 13th cent., may be taken as a typical example of the wide-spread influence exercised by some of these foreign immigrants. The effect of this constant stream of foreign immigration has been to keep India in close contact with the main currents of theological thought and speculation in Islām, and the religious beliefs and practices of the educated section at least of the Muslim population, whether Sunni or Shī'ah, have tended to conform to those in other parts of the Muslim world. A large part of the religious literature has been written in Arabic, and still more in Persian—both languages foreign to India—and the study of these languages has kept the theologians acquainted with the writings of Muslim thinkers outside India. These foreign influences have thus prevented Islām in India from taking on a provincial character, so far at least as the literate are concerned. But among the uneducated converts and the descendants of converts, of Hindu origin, especially in the country districts remote from the centres of Muslim culture, many

survivals of older cults are to be found, and there the Muhammadan differs little but in name from his Hindu neighbour. He continues to worship the gods of his ancestors—particularly the village godlings, whose rites are associated with the cultivation of the soil, and the deities of disease, especially Sitalā, the dreaded goddess of smallpox—and to take part in the Hindu festivals connected with the changes of the season, such as Holi, the festival of the spring equinox, and Dasahrā, the festival of the autumn equinox. Against such Hindu beliefs and practices the orthodox have at all times protested, but the first active campaign against them appears to have been started by Sayyid Ahmad and Ḥājī Shari'at Allāh, who in the second decade of the 19th cent. began to disseminate in India the doctrines of the Wahhābī reforming movement. The writings of a later religious reformer, Maulavi Karamat 'Alī († 1874), were especially influential in combating the observance of Hindu rites and ceremonies by Muhammadans. In more recent years, the greater facilities of communication between one part of the country and another, the spread of education, and the consequent growing influence of theological text-books have increased the tendency towards an orthodox uniformity, but the low level of education among the mass of the Indian Muhammadans still keeps a large proportion of them ignorant of the tenets of the faith which they profess.

The abiding influence of Hindu institutions on the converts to Islām is still further shown by their rejection of the *shari'ah* in favour of their old tribal ordinances in regard to marriage and inheritance. As is well known, Islām is not merely a body of religious dogma but also a system of legislation, but the Muhammadanized Rājputs and Jāts in the Panjāb and the Mappillas on the west coast of S. India have always continued to follow the customs of their Hindu ancestors in preference to the Muslim law of succession.

The influence of Islām in India has not been confined to the Musalmāns themselves, but may be observed in sections of the population that stand outside the Muslim community. There can be little doubt that the Hindu reform movements of the 15th and 16th centuries, especially those connected with the names of Kabīr and Nānak, owed much to Muslim influences. Many low-caste Hindus, especially in N. India, worship Muhammadan saints; these saints are sometimes legendary, like Sakhi Sarwar and Shāh Madār, or historical personages such as Pīr Shams Tabrīz of Multān, or sometimes a mixture of both as in certain enumerations of the Pañch Pīr ('five holy men'), who are represented by some thousands of Hindus to be the only divinities that they worship. An influence of a different character was that of the Mughal court upon the higher ranks of Hindu society, resulting in the adoption of many Muhammadan habits and observances such as are generally significant of adherence to the faith of Islām.

As an ethical system Islām in India presents in many ways a strong contrast to Hinduism. Both, it is true, cherish an ascetic ideal, pursued by the few, and Hindu and Muslim ascetics have often found that they have much in common, and both have often received the veneration of pious adherents of the rival creed. But the stern Puritanism of Islām has set its face rigidly against those characteristics of Hindu conduct which are set forth in the *Kāmasūtras* and illustrated on such Hindu temples as have escaped the iconoclastic wrath of outraged Muslim sentiment. This austerity of Muslim morals runs through the whole of their social life, and lends to their outward bearing an aspect of dignity and self-respect such as springs from a constant recognition of moral

obligation; at the same time it relegates women to the seclusion of the zenana, depriving social intercourse of the charm of their society; and deprecates amusements that other countries find harmless, such as dancing and card-playing. This moral fervour is capable of producing such types as that of the judge who cut himself off from all human associations lest his judgment might be influenced by consideration for a friend, the hard-worked administrative officer who gave away the whole of his official salary in charity, and the scholar who repented in bitter tears because he had made a profit out of the sale of a work on religion. The moral sanction is sought in religion, and moral precepts are based on the Qur'an, the traditions, and the works of authoritative theologians; maxims of conduct are also frequently quoted from the poets and Sufi writers. Treatises on ethics, such as *Akhlāq-i-Nāsiri*, *Akhlāq-i-Muhsini*, etc., are read by the learned, and similar works—e.g., *Akhlāq-i-Jahāngiri*—were compiled in India, but acquaintance with them has been too restricted for them to have exercised much influence on the general moral consciousness of the Indian Musalmāns. This legal and didactic view of ethics may at times degenerate into formalism, and a low level of moral achievement may subsist side by side with fervid professions of piety; but the tendency of modern Muslim society in India is towards a more distinctively ethical basis for conduct and less dependence upon religious authority.

Within the narrow limits of this article it has not been possible to do more than briefly indicate some of the main characteristics of Islām in India. See, further, MISSIONS (Muhammadan), SECTS (Muhammadan).

LITERATURE.—No comprehensive work has yet been written on the religion and ethics of the Indian Muhammadans. The reader will find articles bearing on these subjects in such periodicals as *JASB* (Calcutta, 1832 ff.); *Calcutta Review* (Calcutta, 1844 ff.); *Journal of the Muslim Institute* (Calcutta, 1905 ff.); *Revue du monde musulman* (Paris, 1906 ff.); *EL* (Leyden, 1908 ff.). For the bibliography of historical works see *The History of India as told by its own Historians: The Muhammadan Period*, ed. from the papers of H. M. Elliot by John Dowson, London, 1887-77. A vast amount of material is to be found scattered throughout the official publications of the Government of India; for bibliography see F. Campbell, *Index-Catalogue of Indian Official Publications in the Library, British Museum*, do. 1900. Among separate works may be mentioned: J. H. Garcin de Tassy, *Mémoire sur les particularités de la religion musulmane dans l'Inde*², Paris, 1869; Mrs. Meer Hassan Ali, *Observations on the Mussulmans of India*, London, 1832; W. W. Hunter, *The Indian Musalmans*, do. 1871; Jaffur Shurreef, *Qanoon-e-Islam, or the Customs of the Mussulmans of India*, tr. G. A. Herklotz², Madras, 1863; Syed Ameer Ali, *The Spirit of Islam, or the Life and Teachings of Mohammed*², London, 1898; S. Khuda Bukhsh, *Essays Indian and Islamic*, do. 1912. A more detailed bibliography will be found in the present writer's art. 'India' in *EL*.

T. W. ARNOLD.

MUHAMMADANISM (in Persia).—Islām began in Persia very early. Within a year of Muhammad's death the Muslim armies came into collision with the Persian power, and the conflict lasted for thirty years, extending from the Tigris to the Oxus. The last Zoroastrian dynasty was overthrown in A.D. 750 in the region south of the Caspian. The conversion to Islām was a slower process, and the disappearance of Zoroastrianism was gradual. The intellectual life of Islām was very soon enriched by Persian scholars. It is significant that after the Arab conquest Nestorian missions were successfully prosecuted among Iranians described as pagans.¹ Still, Islām was identified with a foreign invasion—a fact that influenced subsequent history.

The cause of 'Alī gained adherents in Persia from the first, perhaps because Husain married a Sasanian princess. In the Umayyad period revolts were frequent, many of them Khārijite in origin. The

'Abbāsīd conspiracy was begun in Persia; Abū Muslim, the chief conspirator, was a Persian; and the battle of the Zāb, which decided the contest, was fought on the border of Irān. Although revolts were common, the authority of the 'Abbāsīds was generally recognized by the ruling dynasties in Persia, few of which were Shī'ite. The most determined and powerful attempt to establish Shī'ite Islām was that of the Ismā'īlians, or Assassins (*q.v.*). Persia was the greatest sufferer of all in the ruin wrought by the heathen Mongols, and Islām seemed about to perish; Tīmūr was a Sunnite Muslim, but he had mercy on none. With the rise of Safawī kings (A.D. 1500) Shī'ite Islām of the Twelve was established as the State religion—a position challenged since only by the audacious Nādir († 1747), who proposed to make Shī'ite Islām a fifth sect co-ordinate with the four recognized divisions of Sunnite Islām. The paper constitution of modern Persia recognizes Shī'ite Islām as the religion of the realm.

The inner development of Shī'ite Islām has never been adequately described. From the first many Persians refused to believe that the cycle of revelation had closed with Muhammad, and the deification of 'Alī seems to have begun even before his death.¹ This mystical belief in a continuous revelation and a divine presence, different in kind from anything found in the Qur'an, developed into the doctrine of the *imāmat* (cf. art. INCARNATION [Muslim]). In the process of the elaboration of this doctrine sects were formed, the most remarkable being that of the Ismā'īlians, which, strangely, has left scarcely a trace in modern Persia. The cult of 'Alī, and especially of Husain in the celebration of 'Ashūrā (the 10th of Muḥarram), is still in process of growth. Another line of theological development has been Sūfism, the great names in which are Persian (though not all Shī'ite), and which has greater influence to-day in Persia than in any other land. Important events in recent Shī'ite Islām have been the growth of Shaikhism, the birth of Bahāism, and the attempt to join Western constitutional government to Islām.

The influence of Persia in Islām is a larger subject than Islām in Persia. Traces of Zoroastrian influence are to be found in the Qur'an, and still more in the developed Muslim theology.

¹ The victory of the Abbasids was, in a sense, a conquest of the Arabs by the Persians . . . the battles of al-Qadisiya and Nahawand were avenged; Persian ideas and Persian religion began slowly to work on the faith of Muhammad.²

What Islām owes to Persian Sunnites in formal theology, as well as to the dervish orders and Sūfism, may be indicated by mentioning the names of al-Ghazālī, 'Abd al-Qādir al-Jilānī, and Jalāl al-Dīn Rūmī (*q.v.*).

Modern Persia is the resultant of the interaction of complex forces through a long period, and religiously it is far from homogeneous in character. Sunnites number a million or more. The majority of these are Kurds, some are Arabs, some Turks in Adharbaijān, and some are Persians in the Gulf region. Among them the most numerous sect is the Shāfī'ite. Shī'ites are believers in the Twelve Imāms. Sects that are numerous and wide-spread enough to merit attention are the Mutasharī's, the Shaikhis, and the Zahābis. Other sects that should be mentioned are the 'Alī Ilāhīs and the Bahāis. Sūfism, influential as it is, cannot be regarded as a separate sect. The dervishes are an institution that cannot be neglected (cf. art. DERVISH). The following figures are given as an approximation: Sunnites, 1,000,000; Shī'ites, Persians, Lurs, etc., 5,000,000; Tatars, 2,000,000; 'Alī Ilāhīs, 300,000; Bahāis, 100,000.

¹ Browne, *Literary History of Persia*, i. 220.

² D. B. Macdonald, *Development of Muslim Theology, Jurisprudence, and Constitutional Theory*, London, 1903, p. 133.

Even among the Sunnites (especially the Kurds) religion centres much in the cult of the Shaikhs, who are credited with miraculous powers. Many of these are connected with the dervish orders, especially the Naqshbandis.

The great religious principle of the Shī'ites is the veneration of the family of 'Alī and the doctrine of the *imāmat*. While every community numbers its *hajjis*, the great shrine for pilgrimage of the living and burial of the dead is Karbalā, which, moreover, is the place of religious authority, the seat of the chief *mujtahids*, and the centre of theological education and learning. In every city there is a *madrasah* (college), but an ambitious student completes his training at Karbalā, or at one of the neighbouring shrines that share in its importance. The unifying power of such a centre is very important. The other shrine of importance is Mashad. For the mass of the people the great religious observance is the commemoration of the battle of Karbalā on the 10th of Muharram and preceding days. On the spectacular side it is the carnival of the populace, and the timid disapproval of the educated is unavailing to check continual increase of the excesses of grief in cutting the head and beating the breast. Regular passion-plays are uncommon (cf. art. DRAMA [Persian]). Preaching has an important place in the mosque life, and the great topic for sermons is the life of the Imāms. Ghadr Bairām (when Muhammad is supposed to have designated 'Alī as his successor) is at least equal to Qurbān Bairām in popular estimation. The *ḥadīth* (traditions) deal with the sayings and doings of the Imāms as well as of the Prophet, the most popular collections being those of Mullā Baqir Majlisī of Isfahān, made three hundred years ago. The expectation of the reappearance of the Twelfth Imām as al-Mahdī is general. The Sayyids rival the *mullās* in authority and claim the fifth of field and herd. So far the description applies to all Shī'ite sects.

The Mutasharifs, who are by far the most numerous sect, regard the *mujtahids* as the only representative of the Qā'im, or hidden Imām, and only inasmuch as they interpret the *sharī'ah* (canon law). They are conservatives and traditionalists. The Shaikhīs, Zahābīs, and minor sects hold that there is always a representative of the Imām, who possesses in some degree his divine authority. They differ as to who that representative is, and in other matters. The Shaikhīs are the intellectual mystics, interpreting, e.g., the *mi'rāj* (Muhammad's ascent to heaven, deduced from Qur'ān, xvii. 1) in a spiritual way. Zahābīs resemble the dervishes in ascetic practices and in the use of the *dhikr*, both *kafzī* and *galbī* (spoken and silent).

'Alī Ilāhīs and Bahāīs, widely different in other respects, may be classed together as being Muslim in only a modified sense. The former recognize none of the Imāms except 'Alī, care nothing for the *sharī'ah*, pay no attention to Ramaḍān or the prayers, and have their own yearly feast, in connexion with which a common religious meal is eaten. Among Shī'ites they conform more or less, but in private they claim that they are not Shī'ite. They believe in an incarnation, but it is not very clear whether the connexion with 'Alī is not a blind. They call themselves Ahl-i Ḥaqīqah ('people of the Truth'). In practical life the reverence paid to the Sayyids, or *pīrs*, is great. Their religious centre, where the head of the sect lives, is near Kirmānshāh. They are numerous both north and south, among Kurds, Turks, and Persians, and especially in the villages and among the nomads, and are found in smaller numbers in the cities. The Bahāīs are too well known to require description. For them Muhammad and the *sharī'ah* are superseded. They are found in the cities and

among the more educated classes, less often in the villages, and not at all among the nomads. They are increasing. Though only a fraction of the less numerous classes of society, their influence is not to be measured by their numbers. The Azalīs are practically extinct, and the Bahāīs, with insignificant exceptions, follow 'Abbās Efendi. Both these sects practise *taqiyyah*, or religious deception.

The Sūfis (or 'Ārifis, 'γωστικολ') are the philosophical and intellectual devotees of religion, belonging, it may be, to some sect, but not often to the Mutasharifs. Among them are many dervishes. They usually recognize some one as their guide (*murshid*). The most popular poets among them are Jalāl al-Dīn, Shams-i-Tabriz, Farid al-Dīn 'Aṭṭār, and Ḥāfiẓ. Dervishes in Persia are loosely organized, and monasteries are almost unknown. Many dervishes will claim to be *khāksārī* ('abject,' 'humble'), others to be followers of Shāh Na'mat-Allāh or of Ṣafī 'Alī Shāh, a saint of recent date.

The organization of religion is democratic, and in the last analysis it is popularity that determines rank and authority. The government exercises a control by granting titles and recognition, and the *mullās* and *mujtahids*, both as authorized expounders of the *sharī'ah* and as popular leaders, influence government. They are from the people and are susceptible to the influences that affect the people. Low birth is no bar to ecclesiastical advancement. The dervishes are to some extent controlled by the appointment from them of a *naqīb*, or civil head, in each city. Curiously, he has charge also of jugglers, mountebanks, snake-charmers, etc.

The influence of religion in moral and social matters is not easily estimated. Of course it is pervasive. The only education open to most of the people is that in the mosque schools. The pilgrimages promote intelligence and national unity. On the other hand, the shrines are centres of vice, the *mullās* are notorious for venality, the *sharī'ah* is an obstacle to progress, and religious teaching often makes wrongdoing easy rather than difficult. It may be doubted whether those who desire moral or social reform look to religion for inspiration and aid. The least religious classes are the educated and the nomads.

An influence at work that must affect the future of Islām is the rationalization of religion. It takes the form of reducing religion to the minimum of doctrine, equalizing all forms of revelation by admitting truth in each, but granting finality to none. Another tendency is what the Persians call *ṭabī'ī* ('naturalistic'), denying all revelation and taking an agnostic position on the question of God's existence. Another growing influence is the renaissance of Turkish literature in the Ādharbaijān dialect in Tiflis and Bakū. The reaction due to foreign dominance is also to be reckoned with. The influence of Western civilization is in many ways disintegrating. The influence of Christianity mediated by commerce, politics and literature, and missionary effort must not be forgotten. This had its part in Bābism and still more in Bahāism.

W. A. SHEDD.

MUHAMMADANISM (in Syria, Egypt, and Mesopotamia).—A. SYRIA.—Syria and Palestine have always formed one of the outlets for the superfluous population of Arabia. The invasion of the country by the Arabs in the first half of the 7th cent. A.D. was only one of a series of incursions

which had been going on from time immemorial. The conquest, which took place in the Caliphate of 'Omar, only a year or two after the death of Muhammad, occupied a few years (13-15 A.H.), and was facilitated by the fact that the people of Syria came, to a large extent, both in origin and in language, of Semitic stock. The kingdom of Ghassān, which, with that of Hira on the other side of the Syrian desert, formed a buffer State between the empires of Rome and Persia, was of pure Arab blood. When, therefore, the Arabs made their inroads into the country, they were not invading a foreign people, but rather attacking the governing classes only, the representatives of the Eastern Roman empire. Moreover, it was only a score of years since the Persians had wrested the country from the Greeks and held it for ten years. The Persian Wars had depleted the exchequer of Constantinople, and Heraclius had been compelled to withdraw the wonted subsidies from the frontier tribes—a fact which made them all the less unwilling to throw in their lot with the Arabs. When, therefore, 'Omar's forces entered the country, they did not come altogether as invaders, and to the indigenous population the issue was not subjection so much as a change of masters; and it was not impossible that the new masters might be more gentle than the old.

To the Arabs the conquest of Chaldaea was motivated by the lust of plunder, the conquest of Egypt was to a large extent a necessity—had it been acquired a year or two earlier Medina would have been saved from famine—but the conquest of Syria was largely a matter of sentiment. Within its borders were contained nearly all the holy places of Islām. Hūd and Šāliḥ had ministered to tribes within the boundaries of Arabia, but nearly all the remaining prophets—Abraham, Solomon, but above all Jesus—had lived and died in Palestine. Muhammad, too, had visited Syria, once as a mere boy, with his uncle Abu Tālib, and again as the agent of Khadijah. Jerusalem had been the goal of his mysterious night-journey, from which he had ascended to the Divine Presence, and it was from Damascus that he had turned away, saying that one could not enter Paradise twice. The reverence of the Arabs for Jerusalem is shown by the fact that it was towards it that the Muslims turned in prayer during the first two years after the arrival of Muhammad at Medina, and that the capitulation of the city in 637 was accepted by the Caliph in person. On this occasion 'Omar visited most of the sacred places, under the guidance of the patriarch Sophronius. He is said to have identified the site of Solomon's temple, and he erected a small mosque, probably of wood and clay, for the worship of the Muslims. Jerusalem did not become the political capital of the province of Palestine. For that Ramleh was founded somewhat later. But the sacred character attributed to the ancient city by the Arabs appears in the name Bait al-Maqdis ('holy house') by which their historians always call it, or in the shortened form Al-Quds, by which it is known at the present day.

The sanctity in the eyes of the Muslims even of Jerusalem is, however, surpassed by that of Hebron, the home and place of burial of Abraham, Isaac, and Jacob, with their wives, as well as of Joseph. Hence it used to be named Masjid Ibrāhīm ('Abraham's mosque'), but now it is always called Al-Khalil ('the friend'), abbreviated from 'the city of the friend of God.' Hebron fell into the hands of the Crusaders in A.D. 1099 and remained so until it was retaken by Saladin in 1187. The Crusaders do not seem to have had much scruple about entering the sepulchral chambers, but the curiosity of the Muslim does not exceed his sense of reverence, and one of them mentions with a

feeling of the deepest awe that he had conversed with one who had with his own eyes seen Abraham. At the present day Europeans are not permitted to enter the mosque (originally a Crusaders' church), with very rare exceptions, and then only by a special *firmān*.

Under the Umayyads (A.D. 661-750) Syria attained to the hegemony of all the Arab States; and Damascus became the capital of an empire stretching from India to Spain. Mu'āwiyā, the first of the line, had been governor of the country under the Caliph 'Othmān: it was to the Arabs of Syria that his dynasty owed its birth and stability, and the Caliphs of the line naturally wished to do all in their power to strengthen the position and precedence of their adopted country. Hence it was that, after the assassination of 'Alī, Mu'āwiyā proclaimed himself Caliph, not at Medina, which had been the political as well as the religious capital under the first three Caliphs, but at Jerusalem. When, on the death of his son Yazid, the rest of the Muslim world did homage to the rival Caliph Ibn Zubair in Mecca, it was no doubt in some measure owing to the possession of the sacred city of Jerusalem and the tombs of the patriarchs at Hebron that the Umayyads were still able to maintain their position in Syria. And, whilst their rival was engaged in rebuilding the holy house at Mecca, which their armies had besieged, the Umayyad 'Abd al-Malik was building the famous Dome of the Rock upon the site of the Temple of Solomon, as the inscription, in spite of its mutilation under the 'Abbāsids, still bears witness; and it was only after the building was finished, and a substitute for the Ka'bah had been provided to which the pious Muslim might make his pilgrimage, that the rival Caliph was crushed and the Muslim world once again united under one head. Mu'āwiyā had already wished to remove the pulpit of the Prophet at Medina to his new mosque, but in deference to the religious feelings of the people he refrained from doing so. There is no reason to suppose that the Umayyad Caliph acted in this matter from merely pecuniary motives, because he wished to divert the commerce arising out of the pilgrimage to the Hijāz into his own coffers; because, as soon as he was undisputed Caliph, it would not have mattered which town became the object of pilgrimage (J. Wellhausen, *Das arabisches Reich*, Berlin, 1902, p. 132 f.).

The truth is that the Umayyad Caliphs, with the exception of the pious 'Omar II., were not Muslims at heart. They sprang from the old aristocracy of Mecca, the bitterest opponents of the Prophet, who submitted to him only at the last possible moment. They did not scruple to attack and plunder the city of Medina where he had lived and died, and even to destroy the Ka'bah itself, and they had well-nigh exterminated the family of the Prophet. They were a purely civil dynasty ruling in the name of religion, and they did not care what means they used to attain their ends. The great bulk of the population of Syria were Christians. They were, many of them, well educated, and in every way, except in fighting, more useful to the dynasty than the Arabs themselves. All the clerks in the government offices were Christians, and the State archives were written at first in Greek. A similar state of things existed in Persia and in Egypt. It was only under 'Abd al-Malik that the Arabic language began to be used exclusively, and even then the clerks continued to be non-Arabs. Some of the most influential persons about the Caliphs were also Christians. John of Damascus, as well as his father, held high office under these Arab rulers of his native city, and the panegyrist of the Umayyads was the Christian poet al-Akhtal. Moreover, it was not that these Caliphs merely made use of their Christian subjects

whilst ignoring their religious creed. Questions of theology seem to have been discussed by the two parties in the presence of the more liberal Caliphs upon equal terms. Al-Akhtal made no attempt to conceal either his religious belief or the external emblems of his faith, when he stood before 'Abd al-Malik; and John of Damascus was an ardent defender of the use of images in divine worship, wherein he stood in opposition not only to the Caliph but to the Greek emperor as well. Such a state of things could not but react upon Muhammadanism itself, and there is little doubt that some of the less strict ways of thinking which began to prevail were due to this cause. It was to condone the delinquencies of the Umayyads that the Murjites professed to believe that there was no deadly sin for any one who made the profession of Islām, or that at any rate the sinner would not be punished until the Day of Judgment. Belief in divine predestination also began to be modified in the direction of an admission of free will. This tendency towards freedom of thought culminated in the Mu'tazilite movement under the 'Abbāsids (see SECTS [Muhammadan]). Nor was it only on the religious side that Christianity moulded Muslim life. Hishām, one of the last and best of the Umayyad Caliphs, was a notable agriculturist. His governor over 'Irāq was Khālīd al-Qasrī, who was also a farmer on a grand scale. Khālīd's mother was a Christian, and he built her a chapel beside the mosque at Kūfa. He employed Christians and other non-Muslim peoples in preference to Muslims, as he no doubt found them more intelligent and capable. In Hishām's days the doctrine that the Qur'ān is not eternal, which became the accepted creed for a short time under the 'Abbāsids, began to be professed. The century and more during which the Umayyads ruled the Muslim world from Damascus was the most glorious in Arabian annals, and it is not without significance that it was after the last Caliph of the line had removed the capital to his native town of Ḥarrān that the dynasty fell and was replaced by that of the 'Abbāsids.

With the fall of the Umayyads the Arabs ceased to be the ruling race and Syria became one of the provinces of the empire, not specially distinguished in the religious aspect from the rest. On the break-up of the Caliphate, with its resulting chaos, Syria became, with its many holy places, the battle-ground of Christianity and Islām. When it was prosperous and well-governed, it was generally as a dependency of Egypt, under Fātimid, Ayyūbid, or Mamlūk rulers. For the last four hundred years it has formed a province of Turkey.

LITERATURE.—There are no reliable reports published officially by the government. Much information is obtainable from daily and other periodicals appearing in Beirut, mostly edited by Christians. See also A. I. S. de Sacy, *Exposé de la religion des Druses*, Paris, 1838; G. Le Strange, *Palestine under the Moslems*, London, 1890; G. W. Chasseaud, *The Druses of the Lebanon*, do. 1885; C. H. Churchill, *Mount Lebanon*, do. 1883; J. Finn, *Stirring Times; Records from Jerusalem Consular Chronicles, 1855-56*, do. 1878; J. E. Hanauer, *Folklore of the Holy Land*, do. 1910; P. G. Baldensperger, 'The Immovable East,' in *PEFSL*, 1908 (p. 65 ff.) and foll. years; R. A. S. Macalister and E. W. G. Masterman, 'The Modern Inhabitants of Palestine,' in *PEFSL*, 1904 (p. 150 ff.) and foll. years.

B. EGYPT.—Since its conquest by the Arabs about the year A.D. 640, Egypt has, owing partly to its natural wealth and partly to its possession of the Azhar University and its frequent sovereignty over the holy places, played a leading part in the material and spiritual progress of Islām, and especially during the last hundred years it has outstripped all other countries in the direction of the Europeanizing of the faith. The people of Egypt have always been subservient to those of another race. At the beginning of the 7th cent. they had to endure twelve years of Persian domination. After the conquest was

over, however, the Persians ruled, as they generally did, with moderation and tolerance, and, when the country was recovered for the Eastern empire by the conquests of Heraclius, the change of masters was a change for the worse. The natural craving of the Egyptian for a strong arm on which to lean had shown itself in the sphere of theology in their deification of Jesus Christ, which was the basis of their whole-hearted attachment to the Monophysite doctrine; when, therefore, Heraclius sought, through his instrument Cyrus, to force upon them the orthodox formula, and at the same time to increase the revenues obtained from the taxation of the country, the attempt was met by the Copts with dogged resistance, culminating in the flight of their patriarch Benjamin. It was owing to this prevailing discontent that the conquest of the country by the Arabs was a comparatively easy matter, accomplished within a couple of years, and with not more than a handful of troops. 'Amr, who had planned and carried out the expedition, became the first governor of the country. He at once granted religious toleration to the people, whose disputes he did not understand; he restored the Coptic patriarch to his office; and he, at any rate, did not increase the burden of taxation. The seat of government was removed from Alexandria to the fortress of Babylon, close to the modern Cairo, around which a town, called Fustāt, soon sprang up. The southern boundary of the province was at Philæ, the limit of the Christian kingdom of Nubia, with which the Arabs concluded a treaty.

The Copts did not at once go over to the faith of the conquerors. Probably they believed that the occupation would be temporary, as that of the Persians had been. Their only motives in becoming converts to Islām would have been those of self-interest, for Muslims were not subject to taxation. But it was not by any means the interest of the Arab that the subject populations should become converts to the faith, as that would endanger the source from which they drew their stipends, and lead to the bankruptcy of the government. The policy of the Arab rulers, in Egypt as elsewhere, was one of non-interference and continuity. The administration of the conquered territories was carried on, as nearly as possible, as it had been under their previous rulers. The Arabs formed a ruling class, corresponding as closely as may be to the British in India. Their business was, not to make converts to their religion, but to maintain public order, to see that justice was executed, and to collect the revenues. This was pre-eminently the case in Egypt, to such an extent that the newcomers, professed unitarians as they were, to whom images and pictures were abhorrent, did not scruple to take over even the seals of their predecessors in office, on which was frequently engraved the figure of a wolf or other animal—a rather hard nut for modern writers of Hebrew history to crack. The wise tolerance of the Arabs is shown by the fact that not only were their official documents written in Greek and Coptic as well as in Arabic, but many important positions in the government were filled by Christian natives of the country. No doubt, complaints of oppression were not wanting, but what oppression there was seems to have been due to the system which the Byzantines had bequeathed to the Arabs rather than to the manner in which the system was carried out by the latter, and sometimes the fault lay with the native intermediary.

Once more it fell to 'Amr to become the conqueror of Egypt, this time on behalf of the Umayyads, in whose hands it remained for nearly a century (A.D. 658-750). The tragic fall of the Umayyad dynasty and the massacre of their house

made a deep impression upon the Christian population of Egypt, and it is not without significance that it was in Egypt that the last of the Umayyad Caliphs sought shelter from his enemies. For a century the 'Abbāsids continued to send Arab governors to Egypt, and it was not until the year 586 that non-Arab, practically independent dynasties began to be set up in the country.

Under the two centuries of Arab sway Egypt appears to have enjoyed a period of comparative prosperity and good government. The governors are no doubt often abused, but generally without justice. This is especially the case with Qurrah ibn Sharik, who is usually described as an oppressor and persecutor, but whom numerous papyri show to have been a just, if strict, ruler. Moreover, not only was there no religious persecution of the Christians by the Arabs, but these had rescued the native Jacobite church from the hands of their co-religionists, the Greek Malkites, the free-lance nature of the Bedawi always leading him to support the more heretical side—a course which subserved his own interests also. The Arabs even discriminated in the taxation in favour of the Jacobites as against the Malkites to such an extent that not a few of the latter went over to the native church. The Arabs found Egypt in a state of feudalism. The people were serfs attached to the land, and many of the papyri are taken up with the capture of some fugitive who has escaped from his own domain. Not the least benefit which the Arabs conferred upon the Egyptians was to deliver them from their feudal lords, by converting these into mere tax-gatherers for the government.

The purely Arab government under the direct sovereignty of the Caliph was followed by a succession of dynasties of Turkish origin, the Tulūnids (A.D. 868-905), whose capital Qaṭā'i, between Fustāt (i.e. Latin *fossatum*) and modern Cairo, was famous for its splendour, and who for a quarter of a century ruled Syria as well as Egypt; and, after a brief interval, the Ikshidids (A.D. 935-969), who also ruled both Syria and the holy cities of the Hijāz, Mecca and Medina.

The Arabs did not leave behind them much in the way of architecture to tell the visitor of their occupation of the country. The so-called 'mosque of 'Amr' may at least indicate the site on which that of the first conqueror of the country was built, but the latter was a building of very much more modest dimensions than the present spacious place of worship, and not a trace of it remains.¹ Indeed, the original Arab town of Fustāt, although it maintained an independent importance for many centuries, is now regarded as merely a part, and not the most flourishing part, of its younger sister, Cairo.

The dynasty of Ibn Tulūn, on the other hand, left many memorials of their supremacy. The mosque of Ibn Tulūn, said to be an imitation of the Ka'bah designed by a Christian architect, but with a dome superimposed and a minaret round which winds an external staircase resembling that of the Church of the Redeemer in Copenhagen, is still one of the sights of Cairo. Ibn Tulūn's brilliant but unfortunate son also resembled the late Khedive Ismā'il in his devotion to building and public works.

It was, however, under the Fāṭimids that Egypt rose to the height of its greatness. Claiming descent from Fāṭimah, the daughter of the Prophet, these sectaries, as they were held to be by the orthodox 'Abbāsīd Caliphs, took their origin, like so many other movements, both political and religious, in N. Africa, from which they conquered Egypt (A.D. 969-1171). Mu'izz, the fourth

of the dynasty, proclaimed himself Caliph, in opposition to the 'Abbāsīd Caliph in Baghdad, and founded a new city close to the old capital, which he called Al-Qāhira ('the victorious'), the modern Cairo. The name bears a curious resemblance in sound to that of the ancient Egyptian town of Khere-oh in the same neighbourhood. Like most heterodox peoples, the Fāṭimids were enlightened rulers. In spite of famine at home and the inroads of the Carmatians (*q.v.*) from Syria, they quickly consolidated their empire over all the countries bordering upon the shores of the Mediterranean, from Algeria to Syria, the holy cities of Arabia also acknowledging their sway. Security of life and property led to a great increase of population. Commerce was flourishing, and the trade of India, which had up till now passed through Baghdad, began to flow into Egypt, and from this period begins the decadence of the 'Abbāsīd capital and the resulting aggrandizement of Cairo. 'Aziz, the son of Mu'izz, was especially distinguished for his enlightenment and religious tolerance. His reign is the culminating point of the dynasty, although it was considerably later that the prayers were said in the name of the Fāṭimid Caliphs in the 'Abbāsīd capital itself, but only for one year (A.D. 1059). Under Hākim, the son and successor of 'Aziz, the free thinking of the Fāṭimid régime ran riot; under the malign influence of the Persian Darazi the Caliph proclaimed himself an incarnation of 'Alī, and claimed divine honours. He disappeared, but his doctrines were propagated in the sect of the Druses (see SECTS [Christian]). A persecution was also instituted against both Jews and Christians, in spirit not unlike those which the early Christians suffered for refusing to acknowledge the deification of Domitian and other Roman emperors.

The most enduring benefit which the Fāṭimids conferred upon Egypt and upon the whole Muslim world was the founding of the Azhar College. It was begun immediately after the conquest of the country, and opened in the year A.D. 972. The text of the inscription commemorating the opening has been preserved (M. van Berchem, *Corp. Inscr. Arab.*, i. [Paris, 1904] 43, no. 20). It received its name ('the fair') from an epithet of the alleged ancestress of the dynasty. Originally built as a mosque, it was transformed into a college and hospital for the poor by 'Aziz. Under the Fāṭimids the instruction imparted was naturally Shi'ite, but of this period little is known, and by a curious irony the college did not attain to full usefulness until it came under the rule of Sunni, or orthodox, masters.

The annexation of Egypt by Saladin in the year 1169 and the consequent supersession of the Fāṭimid by the Ayyūbid dynasty, naturally led to the immediate abolition of the Shi'ite faith of the descendants of 'Alī and the establishment of the orthodox Sunni profession, not only in the Azhar College but throughout Egypt (1171-1250). This was the more easy of accomplishment as the Egyptian Muslims were always Sunnites at heart, and had submitted to the faith of their Fāṭimid rulers only through compulsion or for the sake of peace. But, if the Fāṭimid form of faith vanished with their dynasty, they have left behind them monuments which show till the present day the greatness of their race. In addition to the Azhar mosque, the ancient city gates which are shown to the tourist date from the Fāṭimid period, as also does the mosque of Hākim, modelled on that of Ibn Tulūn, situated between the Bāb Nasr and the Bāb Futūh. But their best memorial is the city of Cairo itself.

Of the four schools of doctrine which are recognized as orthodox by the Sunnite Muslims, the on-

¹ See E. K. Corbett, 'The Hist. of the Mosque of Amr at Old Cairo,' in *JRAS* xxii. [1891] 759-800.

which first prevailed in Egypt was that of Mālik ibn Anas († A.D. 804). It is still the accepted rite of the rest of N. Africa, but in Egypt itself it has been replaced by that of his friend and disciple Shāfiʿī, who died in Fustāt in the year A.D. 819, and whose tomb is visited still by the pious near the foot of the Mokattam Hills. With a view to rooting out the Shīʿah doctrines and planting in their stead the orthodox faith, Saladin despoiled the Azhar of many of its privileges and endowments, and founded in its place a mosque and college round the tomb of the Imām Shāfiʿī (A.D. 1191), at the same time instituting missions to the outlying districts for the propagation of the true faith. The Azhar, however, quickly rose again into favour with the great and benevolent, and it is from the Ayyūbid rather than from the Fātimid period that its career of brilliance and usefulness takes its beginning. With the coming of the Mamlūks (1250-1517), who succeeded the Ayyūbids, the Hanafite school (called after Abu Ḥanīfah, † in Baghdād, A.D. 767) came into prominence, and still more under the Ottoman Turks (from 1517 on). Being the least strict of the four schools and also the most inclined to monarchy, it was naturally favoured by the government, whilst the Shāfiʿite remained the popular school. As for the Hanbali, the last of the four orthodox schools (founded by the fanatical Ibn Ḥanbal, † 855), it has never taken hold in Egypt, and its students in the Azhar have never been more than a handful at the most.

Meantime the Azhar University, which may be considered the intellectual barometer of Egypt, grew in importance and splendour by leaps and bounds. In the West the conquests of the Christians ending in the expulsion of the Moors from Spain by Ferdinand and Isabella in 1498, and the incursions of Jenghiz Khān at the beginning of the 13th cent. and of Timūr Lenk (Tamerlane) at the end of the 14th in the East, left Egypt untouched. Thus, when its rivals in Cordova and in Baghdād had been swept away, Cairo remained the undisputed mistress of Muslim learning and culture. Both its professors and students were drawn from all parts of the Muslim world, a preference even being given in some cases to those whose homes were most remote. The Muslim man of learning is cosmopolitan in his habits; he visits all countries where he may hope to pick up some crumbs of knowledge or obtain a diploma from some world-famous doctor; and the fame of the Azhar and its instructors naturally led many of these travelling students to settle in Cairo, and sometimes to lecture in its college. The best known of these is probably the philosopher-historian Ibn Khaldūn, who was a native of Tunis and was given posts in the government not only of that country, but also of Fez and Granada. He then came to Cairo, where he was given the office of *qāḍī* of the Maliki. From there he paid a visit to Timūr Lenk at his camp in Syria, and finally died in Cairo in A.D. 1406.

But, while the Azhar may be considered as holding aloft the torch of learning to the whole world, both Muslim and Christian, up to the period of the Renaissance in Europe, it must be confessed that after that epoch it became a stronghold of obscurantism. This is evident from the books which continued to be studied there. The ancient poetry, which is the whole literature of pre-Islamic Arabia, was unheard of, and even the *Assemblies* of the inimitable Ḥariri¹ were neglected. All study was theological (including jurisprudence) or grammatical. Even the original texts of the Qurʾān and the *Traditions* of Bukhārī were not studied so much as commentaries and super-commentaries upon these. Mathematics, natural

philosophy, history, and geography were ignored. In other words, the Azhar, like the 'University' of Fez, continued to be a mediæval school after the Middle Ages had passed away.

Egypt was one of the first homes of Christian monasticism, and this religious tendency of its people showed itself also after they had largely gone over to Islām. One of the earliest and most typical mystics of Egypt is called Dhū'l-Nūn (a name of the prophet Jonah, meaning 'he of the fish'), who flourished in the first half of the 9th cent. A.D.; but perhaps the most famous is Ibn al-Fārīd, who is considered the greatest of all the poets of the mystics. He was born in Cairo in 1181, and died there in A.D. 1235. He was buried on the Mokattam Hills near the tomb-mosque of Shāfiʿī. His principal poem, in 671 lines, has been translated by J. von Hammer-Purgstall (Vienna, 1854). Already under Saladin not only cells and monasteries, but even convents (for divorced wives and other women), began to multiply rapidly. Būṣīrī († A.D. 1279), the author of the famous 'Ode of the Mantle,' which is known all over the Muhammadan world and has been often printed and translated into many languages, was, as his name implies, of Egyptian origin.

Although Islām is theoretically a strictly monotheistic religion, there is perhaps no faith in which the worship of saints plays a larger part. The prayer-book of Jazūlī, a native of Morocco who died in A.D. 1465, consisting of litanies in which the Arabian Prophet is a being certainly more than human, is used wherever his followers are found, and not least in Egypt. The whole of N. Africa, and indeed the Muslim world generally, is honey-combed with secret societies or brotherhoods (*ikhwān*), mostly religious in character. They form each an *ecclesia in ecclesia*. In Egypt there are four such orders named after four mystic or Sūfi (see SŪFISM) saints of the highest rank called 'poles' (*quṭb*). The most famous of these is the Shaikh 'Abd al-Qādir al-Jilānī († 1165), whose shrine is to this day a place of visitation in Baghdād; but the best known locally is Ahmad al-Badawī, a native of Tunis of the 12th cent., whose tomb-mosque is at Tanta, a town of some 60,000 inhabitants, on the railway line about halfway between Alexandria and Cairo. A fair is held there annually on his saint's-day, during which the population swells to half a million, drawn from all the neighbouring countries. It resembles a fair elsewhere, shows of all kinds predominating over whatever religious motive ever existed. In Morocco the four recognized 'poles' differ from those acknowledged in Egypt, and one of them, Shādhilī, a native of the country († A.D. 1258), is also the eponym of one of the more important brotherhoods. In these shrines the room containing the catafalque of the saint is lined with banners, rosaries, ostrich eggs, and votive offerings of every description. Where the shrine has fallen into ruin and consists of four bare walls, rags and pieces of cloth are often tied to a neighbouring tree. These pious emblems represent the prayers of the faithful to the saint to intercede for them in order to obtain some much-desired object, recovery from sickness or, often, the birth of a son. The saints' tombs, which are such a marked feature of the landscape in all Muhammadan countries, are the emblems of an ineradicable superstition, and, it is said, in many cases the haunts of crime.

With the French expedition of 1798 a new era began in the history of Egypt, owing to the attempts of the Khedives to transform it into a European State. Muḥammad 'Alī sent the youth of the ruling classes to be educated in Paris, from which they too often returned imbued with the

¹ Tr. T. Chenerly and F. Steingass, London, 1898.

vices rather than the virtues of Europe. Ismā'il laid down railway and telegraph lines all over the country. Under Taufiq slavery largely disappeared, and polygamy is fast becoming a thing of the past. From Taufiq also dates the liberty of the Egyptian newspaper press, a liberty which has been mostly abused. Indeed, the number of newspapers printed in Cairo is out of all proportion to the number of readers. They are, as might be expected, for the most part published in the interest of some political propaganda, nationalist (which generally means Turkish), conservative, or progressive. The best Christian newspapers are edited by Syrian immigrants. There are three or four journals published by and for women.

The progressive movement initiated by the Khedives naturally reacted on that stronghold of conservatism, the Azhar University. Incredible as it may appear, the instruction given there continued on the same lines as in the 13th century. To meet present-day needs the Gordon College was founded at Khartūm, and also a modern university in Cairo, but the latter has practically no students. Meanwhile the students of the Azhar, who have always been more or less inclined to take the law into their own hands, in 1909 went out on strike, with the result that some concessions were made to modern ideas. The last century in Egypt, however, can hardly be fairly considered as an example of Muhammadan rule, as all the ideas were European, although the instruments putting them in force were Muslim.

On the whole, it may be affirmed that Muhammadanism in Egypt has, considering the times and country, been enlightened and a source of enlightenment. Even at the period of conquest they did not put in force the iconoclastic theory of their faith, and under the Mamlūks, and even under the Fātimids, stone and metal work are, as may be seen by the specimens of the latter in the museum at South Kensington, of a very high order. Neither was there any scruple about making representations of living creatures. Ibn Tūlūn caused two plaster lions to be set over one of his gateways. Saladin introduced the eagle as an ornament in design. On one ewer, of the year A.D. 1232, in the British Museum there are over one hundred animal figures. It was from the Mamlūk artists of Egypt and Syria that this art passed into Europe. In architecture also the Mamlūks excelled. Nearly all the mosques of Cairo originated in their period, and certainly all the finest, not the least remarkable buildings being those of one of the last of the Mamlūks, Kait Bey (1468-96); yet it is on two of the oldest mosques, those of Ibn Tūlūn and of Hākīm, that are found the supposed beginnings of Gothic architecture. With the coming of the Turks a period of decadence supervened, which was only intensified under the Khedives.

With regard to their moral qualities it can be said that the Muslim rulers of Egypt, with the exception of the Caliph Hākīm, were not worse than Muslim rulers elsewhere; Saladin and a few other masters of the country were admirable rulers. The ancient monuments of Egypt still witness to the fact that the Arab conquerors of the country were not ruthless fanatics. The Coptic Church was not exterminated, as Zoroastrianism practically was in Persia, or Protestantism in Christian Spain. The native churches in Cairo are more magnificent than the mosques. One can only hope that the accounts of the persecution, especially under Hākīm, have been exaggerated; but, even if they are literally true, they would not prove that the Muslims treated Jews and Christians much worse than they treated one another. It is certainly remarkable and significant that, at the time of the British occupation, the Copts took the side of their

former masters, thus bringing about an inrush of educated Syrian Christians. British writers do not give the Copts a very high character, and much prefer the Muhammadan in many ways; but this may be the result of ages of subordination. For the present, it is more than doubtful whether a Coptic government would not be more corrupt than the Muhammadan has been. The amusements of the people consist in smoking *hashish* (*Cannabis Indica*), which, being intoxicating, is forbidden, watching public dancers, and listening to songs and stories. All these are degrading to both spectators and performers, and it would be well if they could be put down by the government. The great want of Egypt, as of all Muslim countries, is books of fiction which are at once amusing and decent, but it would take a generation or two before a taste for such literature could be cultivated in the mind of the youthful Egyptian.

LITERATURE.—The most reliable information in regard to present-day Egypt is to be obtained from Lord Cromer's *Modern Egypt*, London, 1903, and from his and his successors' annual Reports to the British Government (1888 ff.), as well as those of the Education and other Departments of the Government of Egypt; see also A. Milner, *England in Egypt*, London, 1892. Much information is also obtainable from E. W. Lane's notes to his tr. of *The Thousand and One Nights*, London, 1839, and his *Manners and Customs of the Modern Egyptians*, do. 1836; also Ibrahim Hilmi, *Literature of Egypt and the Sudan*, do. 1886-88; H. Jolowicz, *Bibliotheca Aegyptiaca*, Leipzig, 1888-91; M. Beirani, *Treatise on the History of the Azhar*, Cairo, 1321 A.H.; K. Vollers, in *Minerva* for 1894 (under 'Cairo'); M. Hartmann, *The Arabic Press of Egypt*, London, 1899; Artin Pasha, *L'Instruction publique en Egypte*, Paris, 1890; W. E. Jennings-Bramley, 'The Bedouins of the Sinai Peninsula,' *FEPS*, 1906 (p. 126 ff.) and foll. years; T. W. Arnold, *The Presiding of Islam*, London, 1913; J. Ohrwald, *Ten Years' Captivity in the Mahdi's Camp*, ed. F. B. Wingate, do. 1892; R. C. Slatin, *Fire and Sword in the Sudan*, tr. F. B. Wingate, do. 1893.

C. MESOPOTAMIA.—In the first quarter of the 7th cent. A.D. the Persians had conquered Egypt and Syria, and the Eastern Roman empire was, for the moment, almost limited by the walls of Constantinople. By a mighty effort, however, Heraclius drove the enemy from his provinces and the Persian empire was in its turn completely broken. This was the opportunity of the Arabs. Chaldaea became an easy prey, and in half a dozen years the empire, which under one dynasty and another had withstood the might of Greece and Rome for a millennium, had ceased to be.

The sudden collapse of Persia is explained by Arab writers by the decadent condition of the country, the effeminacy of the people, the tyranny of the great landowners, and the chaotic state of the government when brought face to face with the hardy nature and simple habits of the Arabs. But equally important is the fact that the population of Chaldaea was itself Arab. The Lakhmid kings, whose capital was at Hira, near the ancient Kūfa and the present Najaf, were, like the Ghassānids on the other side of the Syrian desert, immigrants from Southern Arabia. Mesopotamia itself was peopled by the tribes of Taghlib, Iyād, and, further to the west, Nimar; and at Dūma, in the Jauf, on the route leading from Medina to the Euphrates, was settled a branch of Kelb, the tribe which so influenced the Umayyads in Syria. All these tribes made a profession of Christianity; but how lightly their religion sat on them is clear from the nonchalance with which the tribe of Taghlib fell in with 'Omar's stipulation that they should not bring up their children in the Christian faith. Accordingly, when the Muslims set out to invade Mesopotamia, they met with little opposition and with some assistance from these tribes. The ties of blood proved stronger than those of religion.

Thus Mesopotamia quickly became a Muhammadan country, and, being peopled largely by

Arabs of the tribe of Quraish, it rapidly assumed a leading place in the Muslim world, and remained for three centuries, even when the political capital was Damascus, the intellectual and religious centre of Islām. It was generally divided into two provinces—'Irāq, the southern half, its most northerly town being Takrit, and the northern portion, Jazīra (the Peninsula). Much the more important of the two provinces, from the point of view of the history of the faith, is 'Irāq. It has always been the storm centre of S.W. Asia, from which the majority of the great schisms and disruptions arose, and it remains to-day the seat of the Shi'ah, or party of 'Alī. Even in the days of 'Alī himself it produced the Khawārij (or Seceders), whose main principle was to oppose the established order of belief and of society, and to clamour for a theocracy, by which they really meant anarchy and nihilism. Often apparently exterminated, they continued to be a thorn in the side of the recognized Caliphate for many a day. Baghdād itself was originally built and fortified to protect the person of the Caliph against the fanatical Rawandis, a sect of Khurāsān (A.D. 762). In the first half of the 9th cent. three of the 'Abbāsīd Caliphs threw in their lot with the Mu'tazilah, or party of freedom of thought, and instituted a vigorous persecution of the orthodox believers; and in the second half of the same century a servile war broke out in the country to the north of the Persian Gulf and continued for fifteen years before it was quelled. With the 10th cent. the incursions of the terrible Carmaṭians began, who, though originating in Bahrain, quickly overspread and devastated Mesopotamia, Syria, and Egypt (see CARMAṬIANS). Meanwhile the Turkish slave-soldiers of the Caliphs had become so out of hand that the court was compelled to quit Baghdād and establish itself at Sāmarrā, some seventy-five miles further up the Tigris, and remain there for fifty-five years. By the time they returned the glory had departed from the Caliphate, and the supreme pontiff of Islām had become a puppet in the hands of the military power which happened to be supreme at the moment, until the last semblance of authority was swept away by the Mongol invasion.

But, whilst 'Irāq was the principal seat of heresy and sedition, it became for that very reason a stronghold of orthodoxy and firm government. Its turbulent population required the best brains and the strongest arm to keep them in check, and their very opinionativeness led to the necessary evolution of the particular view which eventually became accepted by the civil power. Just as some of the Caliphs liked to send their worst governors to the holy city of Medina, so some of the best, from the point of view of the Caliph, were sent to 'Irāq. Such governors were, under the Umayyads, Ziyād, half-brother of the Caliph Mu'āwiyah; the famous, if bloodthirsty, Hajjāj ibn Yūsuf, and Khalīd al-Qasri. 'Irāq, too, produced Ḥasan al-Baṣrī († 728), a commentator on the Qur'ān and collector of traditions about Muhammad, to whom the mystics trace their origin; and Abū'l-Ḥasan al-Ash'ari, who at first a Mu'tazilite, ended by reducing the faith to a system which was quickly acknowledged as orthodox and remains so at the present day.

The twin cities of Baṣra and Kūfa were founded immediately after the conquest of Mesopotamia by the Arabs (about A.D. 638). They were at first cantonments for the Arab garrison stationed in the territory conquered by them. These two cities, however, quickly lost their military character, and became what may be called the university towns of Islām. They have been well compared to Oxford and Cambridge, not only in their mutual rivalry,

but also in the wide-spread authority which attached to their dicta. Their scholars laid down the principles of Arabic grammar, and decided, or at least pronounced upon, the proper reading of the text of the Qur'ān, those of one city often taking the view opposed to that advocated by the other. Baṣra especially was the home of free-thinking. It was there that the Arab encyclopaedists published their tracts, and nowhere could the *Assemblies* of Ḥariri († 1122), with their airy use of expressions from the sacred volume, have been so fitly written. The Zanj and the Carmaṭian insurrections, which devastated 'Irāq, brought ruin to both towns; but, whilst Baṣra, under the enlightened 'open door' policy of native rulers, rose again, and is likely to continue an important commercial city, Kūfa never recovered.

One of the most curious facts in connexion with the history of Islām in Mesopotamia is the continuance of idolatrous rites in the midst of the true Faith at the city of Harrān. Originally the seat of the worship of the moon-god, and best known from its mention in the Biblical story of Abraham, this city, from the time of Alexander, became a centre of Greek civilization. Long after Mesopotamia had become a Muslim province, Babylonian magic and Greek wisdom, Syrian paganism and Christian rites, all combined into one system of religion, continued to flourish there. Muslim governors were either kept in ignorance of these practices or bribed to remain silent regarding them. It was only in the year 830 that the Caliph Ma'mūn, when on an expedition against the Byzantines he passed by Harrān, was struck by their strange garb and long hair. Then for the first time their existence became known to the central government. They were offered the alternatives of Islām—one of the tolerated sects or the sword. After some delay they declared that they were the Christians ect of the Ṣābians to whom toleration is granted in the Qur'ān. No doubt the Caliph was only too glad to let them be, as they were one of the chief means of introducing Greek learning into Islām. They produced many writers and translators, of whom perhaps the best known is Tābit ibn Qurrah († 901).

The 'Abbāsīd was essentially a Persian dynasty. The cause had its beginnings in Khurāsān. One Caliph even wished to make the capital there. But the claims of the West were still too great for that, and so 'Irāq, the meeting-point of Semite and Persian, became and remained the seat of government. Baghdād was founded by Maṣṣūr in the year 762, and quickly eclipsed in grandeur all the other cities of the empire. Originally built on the west bank of the Tigris, the government offices and residence of the Caliph were later removed to the east. The insubordination of the Turkish guards at one time necessitated the withdrawal of the court to the small town of Sāmarrā further up the river. There it remained for over half a century (836-892). During this and the subsequent period nearly all the 'Abbāsīd Caliphs came to a violent end at the hands of their own praetorians. Order was somewhat restored when the temporal power of the Caliphs was taken over by the Buwaihids (A.D. 945). These princes were, however, Shi'ites, whereas the population of Baghdād were Sunnites. Thus religious strife was added to civil, and was arrested only on the coming of the Seljūqs (A.D. 1055). Mesopotamia had been split up under innumerable petty chieftains, but now all Asia from Egypt to Afghanistan was under one strong ruler. The proclamation of the Fātimid Caliph in Baghdād in A.D. 1058 was merely a passing incident, and did not stay the march of events. The Buwaihids had already restored the old royal palace of the Khulā and

turned it into a hospital, and now under the Seljuqs many colleges sprang up in Baghdād. Their famous Wazīr Nizām al-Mulk, among his other benefactions, founded the college named after him the Nizāmiyah, which continued to be the principal college in Baghdād, until it was replaced by that of the second last of the Caliphs, Mustansir (A.D. 1226-42). Meantime the commercial importance of Baghdād had passed away at the same time as the temporal power of the Caliphs, and it was not the spiritual head of Islām, but the Seljūq Sultāns, and later Saladin, that proved the chief obstacle to the crusader.

After the fall of Baghdād and the extinction of the Caliphate by the Mongols, Mesopotamia came under the sway of Persia until these were driven back by the Ottoman Turks, who have held it for the last four hundred years. Thus the old rivalry of Constantinople and Irān has been revived, with the added bitterness of the hatred of Shi'ah and Sunnah. To the Persian Muslim Mesopotamia is the most sacred country upon earth, holding as it does the dust of 'Alī and his son Husain. 'Alī was assassinated in Kūfa in A.D. 661, but it was not until 791 that the place of his burial was discovered by Hārūn al-Rashīd, and even the authority for this statement is much later. To 'Alī were quickly attributed superhuman qualities, until he came not merely to be regarded as not inferior to the Prophet himself, but even to occupy the place of the second person in the Christian Trinity. Najaf or Mashhad 'Alī ('Alī's shrine'), some four miles to the west of Kūfa, and Karbalā, the scene of the battle in which Husain and most of his family perished in A.D. 680, some fifteen miles to the north of Najaf, are held, by the Persian protagonists of the divine right of Caliphs, to surpass in sacredness Medina itself, whilst to the Turk, who now rules the land, as to some of the 'Abbāsīd Caliphs, this devotion is nothing less than idolatry.

Mesopotamia, like N. Africa, has always been and still remains a forcing-house for religious fanaticism. In the strife of sects this fair province, one of the richest in the world, has almost gone out of cultivation. There is some prospect, however, that with the construction of the Euphrates valley railway and the annexation of Basra, the efforts to repair the system of canals, which were recently begun under W. Willcocks, will have the effect of restoring the country to what it was under its Sāsānid and Arabian rulers.

LITERATURE.—There are no reliable official reports. J. B. Fraser, *Mesopotamia and Assyria*, Edinburgh, 1842; Justin Perkins, *Eight Years in Persia*, Andover, 1848; F. R. Chesney, *Survey of Euphrates and Tigris*, London, 1850; V. Cuinet, *La Turquie d'Asie*, Paris, 1890; E. Sachau, *Am Euphrat und Tigris*, Leipzig, 1900; M. von Oppenheim, *Vom Mittelmeer zum persischen Golf*, Berlin, 1900; G. Le Strange, *Lands of the Eastern Caliphate*, Cambridge, 1905, pp. 1-126; R. P. A. Dozy and M. J. de Goeje, 'Nouveaux Documents pour l'étude de la religion des Harraniens,' in *Actes du vi^e Congrès internat. des orientalistes*, Leyden, 1888, II. 281 f.

T. H. WEIR.

MUHAMMADANISM (in Turkey).—1. Statistics.—Statistics relating to Turkish conditions have hitherto been of very limited value, and in the circumstances of to-day it is virtually impossible to obtain them. The most recent computations will be found in *Die Welt des Islams*, I. 1. [Berlin, 1913] 32, with which should be compared 'L'Islam en Bulgarie et dans la Roumelie orientale,' in *Revue du monde musulman*,¹ v. [1908] 482. It is unquestionable, however, that the decline of Islām in the Balkan Peninsula proceeds swiftly, and the rapidity with which the numerical decrease of a Muslim population may take place under Christian rule can be estimated from the data relating to Thessaly given by Franchet d'Espérey

¹ Hereafter cited as *RMM*.

in *RMM* xiii. [1911] 87; thus, while in 1881 the 330,000 inhabitants of that district included 50,000 Muslims, in the present population of 381,000 there are only 3000. This shrinkage in numbers can be traced, though not in the same degree, also in Cyprus, Crete, Bulgaria, and Bosnia. It would seem to be doubtful, indeed, if the number of Muslims in the entire peninsula, even including such as are no longer Turkish subjects, would now amount to 3,000,000. As an offset, it is likely enough that there has been an increase in Anatolia. In the Muslim population of Asia Minor those of Turkish blood number about 11,000,000.

2. Development.—It is a manifest fact that the Turks as a people have not played so important a part in the formation of doctrine as in the popular religion. The share which they have had in the later development of Islām cannot as yet be determined, since the necessary scientific investigations have not so far been made. Nor has the protracted struggle which Sunnite orthodoxy has had to wage in Turkey with the Shi'ite faction and various sectarian movements been as yet examined in detail. On the other hand, the innovations introduced during the last century as a result of European influence have been in a measure exhaustively studied. While it is true that many of the proposed improvements were but imperfectly carried out, or were not carried out at all, they nevertheless form the most significant effort made in recent times to modernize Islām. At the outset they were ostensibly to be put in practice in the spirit of Islām, but in many cases, as a matter of fact, they ran counter to it. We are here concerned only with the reforms which come into conflict with the provisions of the *shari'ah*, or Muhammadan law, and thus bear upon Islām as a religion. Besides a number of laws and regulations of the most diverse types there were in particular two decrees issued by the Sultān which, promulgated in a peculiarly impressive form, may be regarded as the pivots of modern Turkish life. These were respectively the *Hatt-i-sharif* of Gulhānah, issued on 5th Nov. 1839, and the *Hatt-i-humāyūn*, 18th Feb. 1856—both belonging, therefore, to the administration of 'Abd al-Majid. While the former made promise, in a merely general way, of sundry reforms which should be in harmony with the spirit of the *shari'ah*, the latter pledged the government to various changes in certain ordinances laid down by that legal system. These changes related to the legal oath and the military service of Christians, and to the abolition of the capital penalty for apostasy from Islām. In connexion with these points a new penal code was issued, and the suppression of slavery resolved upon, in 1858.¹

None of these reforms sprang from the will of the Turkish people themselves; on the contrary, they were effected at the instigation of the European Powers, especially of Great Britain, and were introduced only after long temporizing on the part of the higher governing classes in Turkey. When the Western Powers had succeeded in saving Turkey in the Crimean War, they demanded, as an act of gratitude, the abrogation of the ordinances which could not but be humiliating to the Christian mind. They likewise expected that the changes would serve to intensify the nationalistic consciousness of the non-Muhammadan elements in Turkey, and thus provide a barrier to the grow-

¹ These laws were published in the *Düstür* (Constantinople, A.H. 1280 [=A.D. 1872], 4 vols. and a supplementary vol., consisting of four books [Turkish]; Fr. version in Aristarchi Bey, *Législation ottomane*, 7 vols., do. 1873-86). The laws passed since 1908 have appeared in the *Ta'lim-i-waqfî*; Fr. version in *Législation ottomane depuis le rétablissement de la constitution* ed. A. Biliotti and Ahmed Sedad, Paris, 1912, I. Other useful works are: G. Young, *Corps de droit ottoman*, Oxford, 1905-06; E. Engelhardt, *La Turquie et le Tanzimat*, Paris, 1882-84; F. Eichmann, *Die Reformen des osman. Reiches*, Berlin, 1888.

ing influence of Russia. The Turkish administration was not blind to the difficulty of the undertaking, and to some extent evaded it in a very adroit fashion.

The various points were settled as follows:

In order to permit Christians to take oaths as witnesses—a privilege denied to them by the *shari'ah*—an entirely new judiciary, upon which experts had been at work for a number of years, was established. In addition to the jurisdiction of the *shari'ah*, which thenceforward retained its competence only in certain cases arising out of the personal status of Muhammadans—such as, e.g., affairs relating to marriage, alimony, divorce, inheritance, etc.—the *mahakim-i-nizamiyah* were introduced, organized on European models. At these courts, instead of the sworn evidence permitted by the *shari'ah*, documentary evidence alone was received as valid, so that it was now possible for a Christian to give his testimony even against a Muhammadan.

The abolition of capital punishment for defection from the Muslim faith was conceded in the following terms: 'As every religion and sect in my empire may practise its form of worship with complete freedom, no one shall be obstructed or molested in practising the worship of the religion to which he belongs, and no one shall be compelled to change his religion or sect' (Fr. text, § 8).

The abolition of *haraj* (poll-tax) and the introduction of military service for non-Muhammadans were effected in name, but commutation (*badali-askari*) was still to be allowed (cf. the present writer's art. 'Bedeli-askari,' in *ET*). In reality, therefore, the state of affairs remained as it was, the only modification being that the term *haraj* was replaced by the expression *badali-askari*. It was not till the Revolution of 1908 that military service was actually imposed upon all Turkish subjects quite independently of their religious profession—a measure certainly not conducive to the national welfare.

Similarly, the new penal code was altogether at variance with the criminal law of the *shari'ah*. It was framed by the simple process of taking over the French *code pénal* in 1858, although as early as 1839 the *Hafiz-i-shari'* had promised that such a code would be drawn up, and this had in some measure been attempted. The new penal law was at length modernized by the supplementary decrees of 4th April 1911. The later code, however, did not supersede the penal ordinances of the ancient *shari'ah*; on the contrary, the two sets of laws remain in operation side by side, and offences can be tried by either (cf. E. Nord, *Das türkische Strafrecht*, Berlin, 1912, and A. Heidborn, *Droit public et administratif de l'empire ottoman*, i., Vienna, 1902, p. 364). Of the other reforms, reference need here be made only to the enactments relating to the slave-trade. An irade of 1st Oct. 1854 forbade the buying and selling of Georgian slaves; various ministerial ordinances, dating from the years 1808, 1870, 1871, 1879, and 1889, prohibited all commerce in slaves whatsoever; since 1892 the trade has been regarded as smuggling. From 1890 Turkey has taken part in the International Conferences for the suppression of the slave-trade in Africa at Brussels.

While it is true that many of these reforms were very imperfectly carried out, or not carried out at all, yet their importance should not be underrated. In not a few cases they made a breach in the fabric of the *shari'ah* alike in theory and in practice. A consistent application of the new laws would serve to bring Islām into line with modern ideas; but to what extent this may be effected without great religious wars, and how far Muslim theology is able and willing to deal with the fresh problems involved, the future alone can show. Hitherto Muslim theology has tacitly submitted to the reforms, and has not expressed itself openly regarding them. It is only within recent years that the aspirations of the young Turks have won support among the theologians, but no attempt has been made as yet to produce works of importance in the field of scientific theology. The views of this liberal tendency—if we may so call it—in theology find expression in the *Şirât-i-Mustaqim*, a periodical founded immediately after the Revolution, and from no. 183 (8th March 1912) continued under the name of *Sabîl al-Rashād* (cf. L. Bouvat, in *ERM* xx. [1912] 282–304; M. Hartmann, *Unpolitische Briefe aus der Türkei*, Leipzig, 1910, p. 137).

3. Religious organization. — Apart from the theological group just referred to, the religious ranks of Islām in Turkey have no liking for innovation. The name by which the entire class, as well as the individual member of it, is known is '*ulamā*' (the plural of '*alim*', 'learned'). This long-established organization, as still existing

with but little change in its main features, was founded in the reign of Sultān Muhammad II., the Conqueror (1451–81) (cf. J. von Hammer-Purgstall, *Des osmanischen Reichs Staatsverfassung und Staatsverwaltung*, pt. ii., Vienna, 1815, p. 373 ff.; W. Gibb, *A Hist. of Ottoman Poetry*, London, 1900–09, ii. 394; C. d'Osson, *Tableau général de l'empire ottoman*, iv. 2, Paris, 1791, p. 482 ff.). At its head stands the Shaikh al-Islām, whose office, as now constituted, was created for him by Sultān Süleimān I. the Magnificent (1520–66), though the title had been conferred by Muhammad I., the Conqueror, upon the mufti of Constantinople. In consequence of the reforms, and especially the creation of the *mahakim-i-nizamiyah* (see above), his authority has suffered a considerable decline; he now controls only the religious schools and the *shari'ah*. The board over which he presides is called *Bāb-i-mashāihat-i-islamiyah*, *Bāb-i-fatwā-panāhi*, or, popularly, *Shē-islāmqaşusu*, and consists of the following departments:

(a) *Administrative boards*: (1) *Maylis-i-intihāb-i-hukkyām-i-shar'*, the commission for the selection of spiritual judges; (2) *Maylis-i-imtihan*, commission for the entrance examination for the *maktab-i-muallim* and the *mudarrislik*, presided over by the *dars vakili*; (3) *Maylis-i-mağāh-i-talabah*, commission for the affairs of students; (4) *Maylis-i-mashāih*, commission for the affairs of the dervish orders; (5) *Maylis-i-imtihan-i-gurra*, commission for examining *madrasah* students with a view to their exemption from military service; (6) *Ma'murin-i-'ilmiyah tāga'ud şandığı*, superannuation fund for spiritual officials; (7) board for the administration of the property of wards. (b) *Judicial boards*: (1) *Rümlü gâhî askarî*, the kadi-asker of Rumelia; (2) *Anatolü gâhî askarî*, the kadiasker of Anatolia; (3) *İstambul gâhî askarî*, the *gâhî* of Constantinople; (4) *İ'lämât öläsi*, the office for verdicts; (5) *Maylis tadqiqât shari'ah*, commission for revision of the decisions of the *shari'ah*. (c) *Fatvâhānah*, office for the legal decisions of the *shari'ah* (cf. Heidborn, i. 252 ff.).

While the standing of the Shaikh al-Islām, as of the '*ulamā*' generally, is now greatly inferior to what it once was, their influence among large masses of the people is still very considerable, and to this day they form a power which cannot safely be ignored by the politicians.

4. The dervish orders. — Perhaps an even greater influence among the people is enjoyed by the dervish orders. From the foundation of the Ottoman empire they have played a great rôle in Asia Minor, as they did to some extent even before. As a matter of fact, the gradual Muslimization of the Christian elements in Turkey has been their work; in their indifference towards the existing forms of religion, views of the most diverse character could find a refuge in their midst. Their ideas have come, in course of time, to be assimilated to those of the official and national religious organization. The order of the highest repute at the present day is the Maulavi, so called from the name of its founder, Maulānā Jalāl al-Dīn Rūmī (q.v.), and known in the west as the 'dancing dervishes.' The next in general regard are the Rūfā'ī—the so-called 'howling dervishes.' Certain orders which at one time occupied a powerful position—e.g., the Naqshbandi, the Halvati, the Qādiri, etc.—have now sunk to a lower level; others, again, have been of late gradually growing in prestige—e.g., the Malāmi (cf. Hartmann, *Index*).

The Baqtāshī, an order which at one time, owing to its close connexion with the Janizaries, held a position of special prominence, sank into the background after the suppression of that force by Sultān Mahmūd in 1826, but have quite recently begun to display a more active spirit. In Asia Minor, and even more decidedly in Albania, this order is constantly adding to its strength. By reason of its heterodox views it should hardly be regarded as belonging to Islām at all, but it certainly makes this claim.

It has been methodically dealt with in several recent works of great reliability, such as G. Jacob, *Beiträge zur Kenntnis des*

Derwischorden der Bektaschis, Berlin, 1908, and *Die Bektaschije in ihrem Verhältnis zu verwandten Erscheinungen*, Munich, 1909; C. Huart, 'Les Derwiche bektachis', in *Résumé* ix. [1909] 235, *Textes persans relatifs à la secte des Bektachis*, Leyden, 1909; Rytgö, *Bektāšī sūrrī*, Constantinople, A.H. 1325.

Of literature relating to the orders there is not much of a serviceable kind. J. P. Brown, *The Derwishes*, London, 1898, contains many valuable items of information, but must be read with extreme caution; and the same may be said of A. de Chateher, *Les Confréries musulmanes du Hedjaz*, Paris, 1887.

We need not deal here with such sects as the Yezidis (*q.v.*), the Nusairis, the Tahtaji, the Kizil Bash (*q.v.*), etc., which, though professing certain Muslim doctrines, cannot now be included under Islām. In contrast to the Baqtāshī, who, as has been said, still claim to rank as Muslims, these sects in general renounce the name. As the Shi'ites proper have no real standing in Turkey, they, too, lie outside the scope of this article.

5. Superstition and popular religion.—Superstition is extremely prevalent among the masses, and popular thought exhibits residua of the most diverse forms of religion. We find survivals of the ancient shamanism of the Turki peoples, as well as of Christian and Jewish superstition. This interesting side of Turkish Islām has not yet been exhaustively dealt with, but there are several compilations from which we may glean an adequate impression of it.

Besides a number of shorter papers, as, e.g., F. Schrader, 'Zum vorderasiatischen Volksglauben,' in the Supplement to *AZ*, 25th Sept. 1903, the following deserve special mention: F. Mészáros, 'Osmanisch türkischer Volksglaube,' in *Keleti Szemle*, vii. [1906] 48, 140; Wladimir Gerdlewski, 'Osmanskaya skazaniya i legendy,' in *Ethnographic Review*, Moscow, 1912 (Russ., reviewed by T. Menzel in *Der Islam*, iv. [1918] 123, and F. Schrader in *Osmantischer Lloyd*, 31 Jan. 1913).

There is evidence to show, moreover, that the worship of saints (*awliyā*) and their places of pilgrimage (*ziyaratgāh*) has a predominant place in Turkish popular belief. A large number of these saints can be traced to personages held sacred in ancient Byzantium, the names being in some cases greatly corrupted—e.g., 'Toglu Dede' from St. Thekla—and the places of pilgrimage are still found on the Byzantine sites.

The religious needs of the common people, and more especially of the women, are served by a large mass of devotional literature. The principal works of this class are among the oldest literary monuments of the Osmanli Turks, and their idiom is thus frequently unintelligible to the readers of to-day—a fact which, of course, in no way detracts from their popularity. Pre-eminent among these are the *Muhammadiyah* and the *Ahmediyah*, as also the *History of Junus Imre* (cf. Gibb, i. 164, 389; Hartmann, Index, s.v. 'Junus Imre'). For the study of Turkish literary history these works are all of importance, but their theological value is of the slightest, and their contents need not further concern us here. Similarly, the *Ulm-i-hal* literature requires but the briefest mention; it consists of booklets which, like our modern catechisms, set forth the leading religious doctrines in the form of question and answer.

LITERATURE.—There is as yet no systematic account of Islām in Turkey. Studies dealing with special aspects of the subject have been cited throughout the article in connexion with the particular points, and the older literature will be found in them. The numerous works designed for the general public do not fall to be mentioned here, but we may name as the best of them C. N. E. Eliot, *Turkey in Europe*, new ed., London, 1908.

F. GIESE.

MUHYI AL-DIN IBN AL-ARABI.—Muhyi al-din ibn al-'Arabi, the celebrated Muhammadan mystic, who is generally known by the name of Ibn al-'Arabi or Ibn 'Arabi, was born at Murcia in S. Spain in A.D. 1165. Much of his youth was spent in Seville, where he devoted himself to literary, theological, and mystical studies. After visiting Granada and other Spanish towns, as well as Tunis, Fez, and Morocco, he set out in 1201 for the East by way of Egypt, whence he made the

pilgrimage to Mecca. He did not return to Spain. Many of the remaining years of his life were passed in the neighbourhood of Mecca, but he also travelled extensively in Babylonia, Asia Minor, and Syria, everywhere gaining disciples and spreading his doctrines in conversation with high and low, while, as behoved a good Muslim in the period of the Crusades, he called for repressive measures against the Christian population and encouraged his fellow-Muhammadans to persevere in their faith. He died at Damascus in A.D. 1240.

Whether we regard the extent of his theosophical writings or their influence on the subsequent development of Islāmic mysticism, Ibn al-'Arabi can justly claim the supreme position among Sūfi authors which posterity has accorded to him, and which is attested by the title, 'al-Shaikh al-Akbar,' conferred on him by the almost unanimous voice of those who are best qualified to judge. The list of his works drawn up by himself contains 289 titles (Brockelmann, *Gesch. der arab. Litteratur*, i. 442), and some of them are of enormous length. The most famous and important is the *Futūhāt al-Makkiya* (4 vols., Būlāq, 1876, comprising about 3300 pages). In this, as in many of his works, Ibn al-'Arabi professes to communicate mysteries revealed to him in ecstatic vision by prophets, angels, and even God Himself (a brief résumé of part of the contents of the *Futūhāt* will be found in H. O. Fleischer and F. Delitzsch, *Catalogus librorum manuscr. bibliothecae senator. Lipsiensis*, Grimma, 1838, pp. 490-495). Another book, of smaller compass but equally celebrated, is the *Fuṣūṣ al-Hikam*, in which the author discourses upon the nature and significance of the divine revelations imparted to twenty-seven prophets, beginning with Adam and ending with Muhammad. Besides the *Futūhāt* and the *Fuṣūṣ*, both of which contain a considerable quantity of verse, his prose writings include a mystical commentary on the Qur'ān, a collection of definitions of Sūfiistic technical terms, which has been edited by G. Fluegel, (Leipzig, 1845), and a short treatise on mystical psychology (Arab. text with Span. tr. by Asin Palacios, in *Actes du viii^e Congrès internat. des orientalistes*, iii. 151 f.). He also produced several volumes of mystical poems, one of which, the *Tarjumān al-ashwāq* (ed. with Eng. tr. by the present writer, London, 1911), has a curious history. The erotic style in which it is written gave rise to scandal, and in order to refute his accusers Ibn al-'Arabi published a second edition accompanied by a commentary in which the mystical sense of each verse is explained. Although his interpretations are often far-fetched, the poems themselves supply evidence that there was no ground for the charge brought against him, plausible as it might appear to the uninitiated. The question of his orthodoxy was keenly disputed, and, if many Muslims saw in him a dangerous heretic, others had no doubt that he was a great saint; but even his admirers recognized that the outward sense of his writings was frequently ambiguous, and that the study of them should be permitted only to mystics of ripe experience. At first sight, it seems hard to reconcile Ibn al-'Arabi's extreme conservatism in the sphere of religious law with his remarkably bold and fantastic speculations in the domain of theosophy. He belonged to the Zahirite school, which rejects opinion, analogy, and authority, and takes its stand on the external (*ẓāhir*), literal meaning of the Qur'ān and the traditions. But, while his attitude in regard to legal and ritual practice was that of the literalist (*ẓāhirī*), who looks only at the outward form, in all matters of doctrine and belief he was pre-eminently the mystic (*bāṭinī*), who fixes his gaze on the inward spirit and seeks to

discover the reality of which the words and letters are a symbol. As I. Goldziher has shown (*Die Zāhiriten*, Leipzig, 1884, p. 179 ff.), the two points of view are not mutually exclusive. The Zāhirite practice appealed to many Sūfis, who found in it an expression of their own dislike for the hair-splitting pedantry of the rival schools of law, for the acceptance of external authority as the standard of truth, and for the method of logical demonstration as opposed to intuitive knowledge.

Ibn al-'Arabī, like other Sūfis before and after him, endeavours to combine the Ash'arite theology with philosophical ideas which, in his case, are mainly derived from Plotinus and the Neo-Platonic circle. Thus he has to deal with two different conceptions of God: (1) the Allāh of the Qur'ān, endowed with attributes that are superadded to His essence, and (2) the One Being which is devoid of every attribute, quality, and relation, and which is all that exists. His God retains the attributes of Allāh, but these are reduced to mere relations, having no real existence; hence, although they are the archetypes of the sensible world, they do not affect the essential unity of God, in whom all contraries are identified. In his attempt to explain how plurality can proceed from the Simple One, Ibn al-'Arabī employs the same metaphors as Plotinus, his favourite illustration being the diffusion of light. The intelligible world is constituted by a series of seven realities: (1) God, the One Essence; (2) the First Intelligence or Universal Reason, which comprises every species of divine knowledge and, in Qur'ānic language, is the Pen that inscribes on the Tablet of Universal Soul the divine ideas whereof created things are a copy; (3) Universal Soul; (4) Universal Nature; (5) Universal Matter; (6) Universal Body; (7) Universal Figure. The entire phenomenal universe is the manifestation of those realities, which, before their manifestation, exist potentially—or, as Ibn al-'Arabī says, are non-existent—in the luminous darkness that hides eternally the essence of the Godhead. Manifestation involves relativity, and the relation of the universe to God is that of the determined to the Absolute, of the shadow to the sun. All existence is constituted by form (*ṣūrah*) and spirit (*rūh*). Form answers to the Aristotelian definition of matter; i.e., it is essentially potential and imperfect. Spirit, on the other hand, is what Aristotle calls 'form,' the principle that gives reality and perfection to the forms produced by Universal Nature, which take their place in the order of existence according to their capacity for receiving and manifesting the life of the Universal Spirit that animates the whole. Of these forms the highest is man, who, in virtue of the microcosmic function assigned to him by his Creator, unites and displays all the divine names and attributes, so that he is the mirror in which God beholds and reveals Himself as He really is. This description refers only to the supreme type of humanity, 'the perfect man' (*al-insān al-kāmil*), whom Ibn al-'Arabī identifies with Adam as representing the class of men—prophets, saints, and theosophists—that possess a unique knowledge of God (*Fuṣūṣ al-Ḥikam*, ch. i.; cf. *ET*, art. 'al-Insān al-Kāmil'). Knowledge is a process of reminiscence. In proportion as each particular soul is purified, it receives illumination from Universal Reason by means of revelation (*wahy*), and from Universal Soul by means of inspiration (*ilhām*). The organ of this knowledge is the reasonable soul (*al-nafs al-nātiqah*), which must be distinguished from the vital or animal soul (*al-rūh al-hayawānī*). While the former has only an accidental connexion with the body and is incapable of sin, the animal soul, though not consciously evil, is naturally

corrupt, and suffers punishment for sins committed in the flesh.

The system of Ibn al-'Arabī may be described as a pantheistic monism. God and the world are two correlative and complementary aspects of one Absolute Reality: the world could not exist apart from God, and, if the world did not exist, God could not be manifested and known. The terms 'creator' (*al-Ḥaqq*) and 'creature' (*ḥaqlq*) are logically involved in one another as moments of the Absolute Being, not indeed of equal worth—since *al-Ḥaqq* is eternal, while *ḥaqlq* is contingent (i.e. eternal in the knowledge of God, and originated in respect of its manifestation)—but interchangeable subjects of predication (cf. L. Massignon, *Kitāb al-Tawāsīn*, Paris, 1912, p. 139 ff.). Ibn al-'Arabī delights in the daring paradoxes which this line of thought suggests to him—e.g.,

'He praises me and I praise Him,
And He worships me and I worship Him.
In one state I acknowledge Him,
But in the objects of sense I deny Him.
He knows me and I know Him not,
And I know Him and behold Him.
How can He be independent,
When I help and aid Him?
For that cause God brought me into existence,
Therefore I know Him and bring Him into existence.'
(*Fuṣūṣ*, Cairo, 1921 A.H., ch. v. p. 78).

Although the contrary might be inferred from some passages of his writings, he makes a distinction between the divine and human natures, and his pantheism does not lead to the doctrine of incarnation (*ḥulūl*) or identification (*ittiḥād*). Man can never say with Ḥallāj, 'I am God' (*Ana 'l-Ḥaqq*), because, owing to the constitution of his mind, he is unable to think all objects of knowledge simultaneously, as God thinks them; therefore he is only 'a truth' (*ḥaqq*), not 'the Truth' (*al-Ḥaqq*), who is the counterpart of the whole universe of created things (cf. Massignon, p. 182 f.).

In view of the scanty attention that Ibn al-'Arabī has hitherto received from European scholars, it would be impossible to give a detailed account of his doctrines, and premature to make a more definite statement concerning the character of his theosophy as a whole. Much of it, of course, belongs to the common stock of Sūfistic speculation, but there is also a great deal that appears to be original and based upon the immense store of his own mystical experiences, which he has so copiously recorded and analyzed (for his theory of ecstasy and the seven degrees of 'passing-away' [*fanā*] which he enumerates, see Asín Palacios, 'La Psicología segun Mohidin Abenarabi,' in *Actes du xiv^e Congrès internat. des orientalistes*, iii. 125 ff.). Among the twenty-four heretical doctrines attributed to him by 'Alī al-Qārī (*Risālah fī wahdat al-wujūd*, Constantinople, 1294 A.H.) the following are noteworthy:

(a) That man stands to God in the same relation as the pupil of the eye, which is the instrument of vision, to the eye; i.e., man is the means whereby God beholds His creation and knows Himself; and that we (mankind) are ourselves the attributes with which we endow God—excepting only the attribute of necessary and essential being—so that, 'when we contemplate Him, we contemplate ourselves, and when He contemplates us, He contemplates Himself' (*Fuṣūṣ*, ch. i.). Elsewhere Ibn al-'Arabī says: 'We are the food that sustains the being of God, and He is our food'—a further instance of the way in which he turns the principle of logical correlation to pantheistic uses.

(b) That God is the 'self' (*ain*) of the things that He brought into existence, for He is the 'self' of things in manifestation, though He is not the 'self' of things in their essences. Therefore Ibn al-'Arabī holds that the true mystic, combining the doctrines of *tanẓīh* and *tashbīh*, worships God both

as absolutely transcendent and as externalized in nature (*Fuṣūṣ*, ch. iii.).

(c) That all forms of religious belief are relatively true. This follows from the proposition that God is the 'self' of all created things, whether they be sensible or intelligible. Every sectary forms some notion of God, and in praising the god which he has made he praises himself, while at the same time he blames the gods of other sects and individuals. It would be more wise and just if he perceived God in every form and in every belief, according to the verse (Qur'ān, ii. 109), 'Whosoever ye turn, there is the face, i.e. the reality, of Allah' (*Fuṣūṣ*, chs. x. and xxvii.; cf. *Tarjumān al-ashwāq*, Preface, p. vi).

(d) That, even if the infidels shall remain in hell for ever, their torments will ultimately be transmuted into such pleasure as is enjoyed by the blessed in paradise. 'Abd al-Karīm al-Jīlī develops this theory in his *Insān al-Kāmil* (see the present writer's article, 'A Moslem Philosophy of Religion,' in *Muséon*, 3rd ser. i. i. [1915] 83 ff.). Evidently there is no room in Ibn al-'Arabi's system for the Muhammadan scheme of rewards and punishments. The fullness of the divine wisdom as manifested in creation requires that the spiritual capacities of human souls shall be infinitely various, and salvation and perdition are the effects that correspond with the capacity eternally implicit in God's knowledge of every human soul before its individualization in the material world. Ibn al-'Arabi proceeds to argue that, inasmuch as knowledge is a relation dependent on the object known, viz. the soul and its potential capacity, each individual is responsible for the good and evil which are produced by that capacity (*Fuṣūṣ*, ch. v.); but in another passage of the same work (ch. viii.) he declares that it is a more profoundly mystical thought to regard the soul as a mode of God, and its recompense as a divine illumination (*tajallī*) in the form of pleasure or pain which are felt by God Himself.

(e) That the saints are superior to the prophets. Ibn al-'Arabi does not state the doctrine in this absolute way. The prophets, he says, may be viewed in three aspects: as apostles, they bring a religious code to their people; as prophets, they inform them about God in proportion to their own knowledge; and, as saints, they pass away in God and abide in Him. Saintship is the inward, mystical, everlasting element in prophecy. Hence the prophet *qua* saint ranks above the prophet *qua* religious legislator or preacher of divine truth (*Fuṣūṣ*, ch. xiv.). According to 'Alī al-Qārī, Ibn al-'Arabi claimed to be the Seal of the Saints (*Khātam al-auliya*), as Muhammad is the Seal of the Prophets.

LITERATURE.—The best general survey of Ibn al-'Arabi's theosophy is contained in two papers by Asín Palacios—'La Psicología según Mohidín Abenarabi,' in *Actes du xiv^e Congrès internat. des orientalistes*, Algiers, 1905, iii. 79-150, and 'Mohidín,' in *Homenaje a Menéndez y Pelayo*, Madrid, 1899, ii. 217-256. The latter volume (pp. 191-216) includes an essay by Julián Ribera, 'Orígenes de la filosofía de Raimundo Lullio,' which gives much information concerning the life of Ibn al-'Arabi and the influence of his ideas upon those of Lull. See also A. von Kremer, *Gesch. der herrschenden Ideen des Islams*, Leipzig, 1898, p. 102 ff.; C. Brockelmann, *Gesch. der arab. Literatur*, Weimar, 1898-1902, i. 441 ff.; R. A. Nicholson, *Literary History of the Arabs*, London, 1907, p. 399 ff.; D. B. Macdonald, *Development of Muslim Theology*, do. 1903, p. 261 ff.

MULLĀ.—*Mullā* is a title of varied usage, given to officials of different ranks, but invariably to men who have received some degree of education in a *madrasah*, or higher mosque school, and hold certificates testifying thereto; it is also a generic term applied to such officials as a class.

Mullā is a proper pronunciation of the Turkish *mevlā*, the Arab. *mawlā* (lit. 'lord,' 'master,' 'patron'; also 'slave,'

'client'; any one standing in any sort of fixed relationship to another); it is used commonly among the Muhammadans of Turkey, Persia, Russia, India, and their spiritual dependences. In India, however, the form *maulavi* or *mūlvi* is also used in reference to the *mullās* of the lower grades, below the rank of *ālīm* (plural=*ulamā*). The form *mevlānā* ('our lord') is applied to the most eminent *ulamā*, and also to eminent Ṣūfī leaders. In Turkish a distinction is further made by affixing instead of prefixing *mullā* to the name of a judge of a higher court. In Arabic-speaking countries *mullā* as a generic term is not so frequently used; in the term 'Mullā of Jerusalem,' 'of Cairo,' 'of Medina,' etc., the reference is to the chief justice of the Muhammadan religious court of each city; while *shaykh*, a title of older usage in Muhammadanism, has persisted especially in application to a religious teacher of authority. The term 'Mad Mullā' has sometimes been applied to certain fanatical religious leaders in India and the Sūdān who, having proclaimed themselves the *Mahdī* (q.v.), have led revolts against the established government.

The characteristics of the *mullās* as a class are determined largely by the education which they receive. The ranks are recruited normally from the lower, less often from the middle, classes. Between the ages of eleven and fifteen, having passed through the *maktab* ('elementary school'), students are admitted as *sofīas* ('undergraduates') to the *madrasah* (higher mosque school). The curriculum offers training mainly in dialectics, theology, and the canon law based on the Qur'ān and traditions (*ḥadīth*); it is that of a theological seminary of the orthodox type. The Oriental languages are also taught, and in previous centuries there were *mullās* who became famous in the field of *belles-lettres*; but in more recent times the graduates have been only lawyer-theologians. The complete curriculum requires at least fifteen, in practice generally eighteen, years for fulfilment; but very few students succeed in completing the course and passing the various examinations which entitle them to a place in the higher ranks of the *ulamā* and to appointment to the higher judicial and university positions. Owing to the Oriental veneration for scholars, as well as to certain privileges which they enjoy (such as exemption from military service, and free, though very simple, food and lodgings), many students enter the *madrasah* who are physically unable to bear the hardships of the student life and mentally unfitted for the full curriculum. Accordingly, the majority leave the *madrasah* after from one to five years of study, during which any tendency to independent thought and investigation has been discouraged and a blind devotion to traditional Muhammadanism has been made the fixed principle of life. At the end of each year's work or the completion of each professor's course, the student receives a certificate testifying to his fitness to hold some position demanding that amount of learning. Leaving the *madrasah*, he is now in the *mullā* class, and receives the support of that class in the appointment to some minor office, generally in some village or small town in the provinces. He may become an *imām*, 'leader in prayer' (though this office is not reserved exclusively for the *mullā* class), or a teacher in a primary school (and the incapacity of such teachers in the Orient is proverbial), or a lecturer in some small *madrasah*, or even a judge of one of the minor courts. It is the *mullā* as provincial mosque preacher who is regarded as typical of the class. Once in office, the *mullā* is sure of a position for life, though he may be transferred from one school or mosque to another.

Without any fixed organization, the *mullās* nevertheless form almost a caste; they are distinguished by the large turban and the flowing robe, though neither is prescribed. In influence over the masses and in devotion to formal religion, the *mullā* class has often been likened to a priesthood—a comparison which fails in accuracy only in so far as the *mullā* receives no special consecration to office, does not in any way replace the individual in offering prayer or sacrifice, cannot grant absolu-

tion, and performs no necessary part in the rites connected with birth, circumcision, marriage, or death. But, in being the teacher of these rights and duties and the accepted adviser in questions of faith as well as of daily life, the *mullā* considers himself in a position above that of the other Oriental clergy—whose equal at least he generally is in learning and whose superior he is in the persuasive powers of his dialectics.

In their conservative and reactionary tendencies the *mullās* have generally given their support to the absolutism of temporal authorities—in Turkey especially to the Sultān as head of both the Church and the State—and they have opposed the introduction of Western culture as encouraging religious indifferentism and ceremonial laxity, and as substituting rationalism for their own fatalism. In Persia, however, where the Shi'itic form of Muhammadanism prevails, and where, consequently, the temporal ruler is not regarded as the head of the Church, the *mullās* often exercise their popular power against the State authority, matching the despotism of the latter with their own extreme fanaticism. There the house of the *mullā*, like mosques and shrines in all Muhammadan lands, is an inviolable place of refuge; and Persian *mullās* have often been charged with harbouring outlaws, whose services they have then used in furthering their own designs. The power of the *mullās* is sometimes checked to a certain extent by that of the dervish orders, and in Turkey, India, and Egypt by the secular courts instituted in more recent times to administer the so-called '*urf*' ('customary law').

The *mullās* in general, being sincere in their devotion to their calling, are seldom guilty of infractions of the moral law; indeed, they have generally been held to contrast favourably with the lower priesthood of other faiths. Moral probity is less marked among the Persian *mullās*, however, who, at heart more devoted to Persian poetry than

to Muhammadan theology, hold their own functions in light esteem. In one respect, too, the *mullās* everywhere, especially those who fill the office of minor judge, are not above reproach; inasmuch as the stipend furnished by the mosque endowments, and official salaries in general, are very small, the practice of usury and acceptance of bribes is frequent—an abuse which early Muhammadanism attempted to avoid by the principle that religious teachers should always have some other means of gaining a livelihood.

Despite the reactionary tendencies and the corruptibility generally ascribed to the *mullā*, the history of Muhammadanism contains the names of many *mullās* conspicuous for nobility of character and devotion to absolute justice, who have risked their lives to rebuke the corruption and tyranny of rulers. To-day, too, the number of clear-headed, honest leaders among the Turkish, Arabic, and Indian '*ulamā*' is steadily increasing; not a few *softas* have been sent from Turkey to receive part of their education in Europe; in India the *mūlvis* have sometimes warmly advocated the innovations of the English; and everywhere in the larger cities subjected to European influence the traditional type of *mullā* is being combated by advanced Muhammadans who, even when they are rationalists, at the same time deny that they are guilty of any defection from the fundamental principles of Muhammadanism; and fatalism is often taught, practically if not logically, as a doctrine which induces fortitude in bearing the accidents and misfortunes of life, without permitting the cessation of righteous endeavour in any cause as long as Allāh has not shown, by making its failure a *fait accompli*, that His will and decree are opposed thereto.
